## Part 1: General Requirements

## 1 Introduction

- 1.1 This Schedule 2 describes the New Works Requirements for the Design, construction and completion of the New Works.
- 1.2 Unless otherwise noted all statements refer to the whole of the New Works.
- 1.3 Within these New Works Requirements and other parts of this Agreement, chainage is referred relative to the Reference Drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements.
- 1.4 Reference to left (L) and right (R) of chainage points is relative to the direction of increasing chainage in metres.
- 1.5 Within these New Works Requirements and all other parts of this Agreement, Reference Points are used to denote the position on the Reference Drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements.

## 1.6 Definitions

- 1.6.1 Defined terms used in these New Works Requirements are the same as those set out in this Agreement with the following additional defined terms:

**Establishment Period** means a period of five years measured from: the date of Final Completion for O&M Roads; and the date of the relevant Third Party Roads Completion Certificate for individual Third Party Roads. During the Establishment Period the Company shall carry out such works as are specified in this Agreement, including, but not limited to, replacement of any failed landscape planting element.

**Land Made Available by the Scottish Ministers for the New Works** means the land shown on the drawings listed in Appendix 0/4 to Part 4 of these New Works Requirements under the title "Land Made Available by the Scottish Ministers for the New Works".

**Reference Drawings** means the set of drawings listed in Appendix 0/4 to Part 4 of these New Works Requirements under the title "Reference Drawings".

**Reference Points** means the points shown on the drawings listed in Appendix 0/4 to Part 4 of these New Works Requirements under the title "Reference Drawings".

**Trunk Road** means a road for which there is a Trunk Road or Special Road Order.

- 1.6.2 References in these New Works Requirements to "paragraph(s)", "section(s)", "item(s)", "table(s)" and "Appendix / Appendices" shall refer to such "paragraph(s)", "section(s)", "item(s)", "table(s)" and "Appendix / Appendices" of that part of these New Works Requirements.
- 1.6.3 Except to the extent defined elsewhere in this Agreement, defined terms contained in these New Works Requirements shall have the meaning given to them in the DMRB as the context requires.

## 2 Design, Construction and Completion

- 2.1 Subject to the other provisions of this Agreement, the Design, construction and completion of the New Works shall comply with:
- 2.1.1 the DMRB;
- 2.1.2 the MCHW;
- 2.1.3 the Specification as found in Part 4 of these New Works Requirements;

Part 1: General Requirements

---

- 2.1.4 The Design and Use of Directional Information Signs: Local Transport Note 1/94;
- 2.1.5 the Traffic Signs Regulations and General Directions 2002;
- 2.1.6 the Traffic Signs Manual;
- 2.1.7 the Disability Discrimination Act Good Practice Guide for Roads (Transport Scotland);
- 2.1.8 the Certification Procedure; and
- 2.1.9 any other specific standards otherwise referenced elsewhere in this Agreement.
- 2.2 The Design, construction and completion of the New Works shall meet the requirements and, as relevant, be consistent with the Environmental Assessment Documents listed in Schedule 8.
- 2.3 Subject to the provisions of this Agreement, the Company shall prepare and supervise the preparation of a Design sufficient to allow the construction and completion of the New Works, which New Works Design shall:
- 2.3.1 be developed from and be consistent with the Conceptual Design; and
- 2.3.2 comply with and be carried out in accordance with these New Works Requirements and the provisions of the Agreement.
- 2.4 The Company shall ensure that all persons referred to in the Certification Procedures shall:
- 2.4.1 at all relevant times be appointed to carry out the procedures referred to therein; and
- 2.4.2 at all times comply with the Certification Procedure.
- 2.5 The Company shall not commence or permit the commencement of construction of any part of the New Works until the relevant pre-construction certificates (all relevant certificates necessary for the certification of the relevant part of the New Works Design) shall have been submitted to the Contracting Authority in accordance with the Certification Procedure and the Contracting Authority have acknowledged receipt of such pre-construction certificates.
- 2.6 Notwithstanding the other provisions of this Agreement, the Company shall consult and comply without limitation with those organisations identified in Appendix B to Part 2 of these New Works Requirements. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- 2.7 Design Checker**
- 2.7.1 The Design Checker shall be appointed by the Company, who shall submit names and details of the proposed Design Checker for approval in accordance with the Certification Procedure.
- 2.7.2 Once approval of the Design Checker is obtained, the Company shall appoint the Design Checker.
- 2.8 The Company shall appoint an Access Champion in accordance with the *Disability Discrimination Act Good Practice Guide for Roads (Transport Scotland)* who shall champion the needs of non-motorised users and disabled people and who shall

---

**Part 1: General Requirements**

---

ensure the Works are undertaken in accordance with the Disability Discrimination Act Good Practice Guide for Roads (Transport Scotland).

### **3 General Requirements**

3.1 Where the DMRB requires a decision by the Designers which affects the standard of the Design, each decision shall be recorded and shall form part of the information accompanying the appropriate Design Certificate or Design Interim Certificate as detailed in the Certification Procedure.

3.2 Any requirements that any material or article shall comply with any specified standard whether a British Standard, other named standard or otherwise, shall be satisfied by compliance with any relevant national or governmental standard of any member state of the European Union or any relevant international standard recognised in such a member state, provided that in either case the standard in question offers guarantees of safety, suitability and fitness for purpose equivalent to those offered by the standard which is specified in this Agreement.

3.3 Any requirement to use a material, article or testing which is defined by reference to a named supplier or manufacturer or a specified Quality Assurance Scheme or Agrément Board Certificate, or which is registered with or has otherwise received the approval of the Overseeing Organisation shall be satisfied using material or an article which has received equivalent approval in another member state of the European Union provided that the material or article in question is as safe, suitable and fit for the relevant purpose as material, article or testing complying with the requirement as set out in this Agreement.

3.4 Existing materials, street furniture, or infrastructure may only be reused where such material fully satisfies the Specification and the relevant codes, schemes, and Certification Procedure and shall be clearly identifiable and accompanied by all relevant and necessary certificates before it shall be used in the New Works.

3.5 For the purposes of this Agreement best practice shall be applied at all times.

In the context of any part of the Design, where any ambiguity shall be raised by either:

3.5.1 the Company;

3.5.2 the New Works Contractor;

3.5.3 the Designer;

3.5.4 the Design Checker; or

3.5.5 the Contracting Authority.

as regards either advice or its application in terms of best practice and where such ambiguity cannot be resolved between the Company and the Contracting Authority, then the matter shall be referred to the Dispute Resolution Procedure for determination.

### **4 Provision of Records and Information**

4.1 Without prejudice to any other provisions of this Agreement the Company shall provide the records and information required in Part 6 of these New Works Requirements.

#### **4.2 Property Condition Surveys**

## Part 1: General Requirements

- 4.2.1 The Company shall carry out a risk assessment of the effects the Design, construction and completion of the New Works may have on the structural integrity of adjacent buildings and Structures.
- 4.2.2 The Company shall arrange for property condition surveys to be undertaken in relation to those buildings and Structures that the Company considers appropriate relative to their proximity to the New Works in advance of any New Works commencing.
- 4.2.3 Notwithstanding any other provisions of this Agreement the Company shall arrange for property condition surveys to be carried out on the following properties and buildings associated with the properties:

Such surveys shall be carried out by a chartered structural engineer, with the details of the chartered structural engineer which the Company intends to use to carry out the surveys to be submitted for written approval by the Contracting Authority.

**Part 1: General Requirements**

---

- 4.2.5 Such surveys shall be carried out in two stages as follows:
- (i) The first stage shall consist of pre-construction start condition surveys including photographic records to be carried out prior to the commencement of any New Works. Three copies of the pre-construction start condition survey records, and reports shall be completed and forwarded to the Contracting Authority in advance of any New Works commencing.
  - (ii) The second stage shall consist of post-construction completion condition surveys including photographic records to be carried out no later than 4 weeks after Final Completion. Three copies of the post-construction completion condition survey records, and reports shall be completed and forwarded to the Contracting Authority no later than 8 weeks after Final Completion.
- 4.2.6 In respect of all such property condition surveys, the Company shall arrange entry to the properties with the property owners. This entry arrangement shall be in writing with a copy of this correspondence issued to the Contracting Authority. The Company shall provide the property owners with a copy of both the pre-construction and post-construction property condition surveys at the same time as they are provided to the Contracting Authority.

**5 Disruption During Construction**

- 5.1 The Company shall ensure that disruption to road Users and other third parties during construction and completion of the New Works shall be kept to the minimum possible. The Company shall ensure that there shall be adequate alternative provision of an appropriate standard for all vehicular, non-motorised Users and animal traffic to all existing roads, footways, accesses, premises and otherwise either adjacent to or affected by the New Works.
- 5.2 Notwithstanding the other requirements of this Agreement the Design shall ensure the continuity of operation of all existing electric fencing and existing water supplies affected by the Design, construction and completion of the New Works. The Company shall be aware that the scheme is expected to affect the operation of a number of existing private water supplies, and shall make the necessary arrangements for provision of alternative water supplies as necessary in the event of disruption to such supplies.

**6 Temporary Traffic Management Schemes**

- 6.1 Notwithstanding any other provisions of this Agreement, the Company shall consult and comply with the requirements of:
- 6.1.1 Transport Scotland;
  - 6.1.2 Aberdeen City Council;
  - 6.1.3 Aberdeenshire Council;
  - 6.1.4 Police Scotland; and
  - 6.1.5 North East Management Unit;
- as appropriate on all Temporary Traffic Management Schemes.

The Company shall provide Consultation Certificates in accordance the Certification Procedure in respect of this requirement.

## Part 1: General Requirements

6.2 Notwithstanding any other provisions of this Agreement, the Company shall consult and comply with the requirements of:

6.2.1 Police Scotland;

and provide assistance to the Police in monitoring and enforcing speed restrictions.

The Company shall provide Consultation Certificates in accordance the Certification Procedure in respect of this requirement.

## 7 Description of the New Works

7.1 The New Works for the AWPR/B-T Project shall consist of the design construction completion and financing of a package of two discrete construction elements, each of which has been developed separately through the statutory process, comprising:

- (i) a new A90 trunk road between Stonehaven and Blackdog, together with a new A956 trunk road between Charleston and Cleanhill; and
- (ii) a new A90 trunk road between Balmedie and Tippetty, together with an improved A90 trunk road between Blackdog and Balmedie.

7.2 In addition, the New Works for this Project shall include the design construction and completion of a slip road access from the A96 to the A96 Park and Choose site at Dyce. This element shall be included within the overall scope of works for the AWPR.

7.3 The scope of the New Works shall consist of, but not be limited to, the works described below.

7.3.1 Aberdeen Western Peripheral Route

- (i) construction of approximately 46 km of new off-line dual two and three lane all-purpose carriageway;
- (ii) construction of approximately 1 km of widened dual three lane all-purpose road within the existing A90 trunk road;
- (iii) construction of seven new junctions at Cleanhill, Milltimber, South Kingswells, North Kingswells, Craibstone/Dyce, Goval and Blackdog and amendment of two existing junctions, at Stonehaven and Charleston;
- (iv) construction and improvements of structures, including two new major river crossings at the River Dee and the River Don, and a new road bridge crossing over the Aberdeen-Inverness Rail Line;
- (v) demolition and replacement of existing trunk road bridge structures;
- (vi) construction of new access roads and side roads and realignment of existing side roads;
- (vii) construction of new pedestrian/cycle paths;
- (viii) construction of flood alleviation storage areas; and
- (ix) construction of a slip road approximately 200m in length from the A96 to the A96 Park and Choose Site.

7.3.2 A90 Balmedie - Tippetty

- (i) construction of approximately 9 km of new off-line dual two lane all-purpose carriageway;
- (ii) construction of approximately 3 km of rehabilitated dual two lane all-purpose road within the existing A90 trunk road;

## Part 1: General Requirements

- (iii) construction of three new junctions at Balmedie, Newburgh Road and Tippetty;
- (iv) construction of a number of highway structures, including a crossing of the Foveran Burn;
- (v) construction of new access roads and side roads and realignment of existing side roads; and
- (vi) construction of new pedestrian/cycle paths

## 7.3.3 General

- (i) new carriageway drainage incorporating sustainable drainage systems (SuDS) facilities;
- (ii) environmental mitigation and enhancement works as described in the Environmental Assessment Documents;
- (iii) road boundary fencing and road restraint systems;
- (iv) watercourse diversions and drainage/watercourse culverts;
- (v) earthworks and ground improvement works;
- (vi) kerbs, footways and paved areas;
- (vii) traffic signs and road lighting;
- (viii) an ITS across the Project network, including communications infrastructure, electrical work, variable message signs and the like;
- (ix) diversionary and other similar works for Statutory Undertakers, private utility companies and the like, including pipeline crossing structures in respect of pipelines owned by BP and Shell;
- (x) traffic management;
- (xi) accommodation works; and
- (xii) all other works generally associated with a special road and trunk road scheme.

**8 Land Made Available by the Scottish Ministers for the New Works**

- 8.1 The extent of the land made available by the Scottish Ministers for the purposes of constructing the New Works shall be as shown on the Land Made Available by the Scottish Ministers for the New Works drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements. Details of the limitations on use of the Land Made Available by the Scottish Ministers for the New Works shall be as contained in Appendix 1/7 to Part 4 of these New Works Requirements and the other provisions of this Agreement. Any other information shown on the Land Made Available by the Scottish Ministers for the New Works drawings including survey information and otherwise shall be for information only. Such other information shall be unwarranted by the Scottish Ministers and does not form a part of this Agreement.
- 8.2 Where any Consents or otherwise shall be required as a result of the Design or any part of the Design for any part of the New Works, these shall be obtained by the Company from the Relevant Authority and submitted to the Scottish Ministers prior to construction, completion and maintenance of that affected part of the New Works proceeding.
- 8.3 The Company shall consult and comply with the requirements of:
- 8.3.1 Aberdeen City Council; and

---

**Part 1: General Requirements**

---

**8.3.2** Aberdeenshire Council;

as appropriate, with respect to working hours and the control of noise and vibration as detailed in Appendix 1/9 to Part 4 of these New Works Requirements. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

**9 Licences Approvals and Otherwise**

9.1 The Company shall not have either possession or right of entry onto land owned or reputed to be owned by either:

9.1.1 Network Rail; or

9.1.2 any other third party;

until any necessary licences, approvals and otherwise shall have been granted in writing by either Network Rail or any other third party.

9.2 The Company shall consult, comply and negotiate with either Network Rail or any other third party to obtain the necessary licences, approvals and otherwise to enable the construction and completion of the New Works. In this respect the Company shall also refer to Appendix 1/7 to Part 4 of these New Works Requirements. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

9.3 The Company shall consult and comply with the requirements of SEPA with respect to complying with the requirements of the Water Environment (Controlled Activities) Regulations 2005 (CAR). The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement. The Company shall also provide a copy of the relevant licences, registrations and otherwise as required under CAR to the Contracting Authority prior to commencement of the relevant New Works.

**10 Access to the New Works Site**

1.1 All roads and accesses affected by the New Works shall be retained and kept operational throughout the period of the New Works until alternative suitable means of access are provided in accordance with Appendix 1/17 and Appendix 1/18 to Part 4 of these New Works Requirements.

1.2 Notwithstanding the other provisions of this Agreement, any agreement to alter a private access in any way shall be confirmed in writing by the Company with the appropriate landowners, tenants and occupiers and other authorised users and the Company shall be required to have such agreement in writing prior to any alteration to the access. A copy of any agreement together with supporting drawings shall be submitted to the Contracting Authority prior to implementation of such agreements.

1.3 The Company shall provide at least four weeks written notice to the Contracting Authority, the Relevant Authorities and other interested parties in advance of its intended date for stopping up any roads in accordance with the Orders.

1.4 Road access to the New Works Site shall be gained solely via classified roads subject to the requirements of Appendix 1/19 to Part 4 of these New Works Requirements.

1.5 Access to the New Works Site from public roads shall be subject to the requirements of Appendix 1/17 to Part 4 of these New Works Requirements.

1.6 Notwithstanding the other provisions of this Agreement, the Company may gain entry to the New Works Site via private land only with the prior written agreement of

---

**Part 1: General Requirements**

---

the landowner and occupier after having obtained any necessary planning consent or otherwise. Access to such private land from the public road shall be to the requirements of paragraphs 10.1 and 10.2.

- 1.7 The Company shall bear full responsibility for negotiating, paying for and bearing all costs relating to these accesses and for any matters arising with parties who consider themselves to be affected by these accesses.
- 1.8 The Company shall assess the potential environmental impacts of any such access and ensure that any adverse environmental impact shall be avoided.

**11 Orders**

- 11.1 Notwithstanding any other provisions of this Agreement, where the Company enacts either further Orders or Environmental Assessment Documents to accommodate the Design, construction and completion of the New Works, the Company shall be responsible for:
- 11.1.1 any additional time and cost for Design, construction and completion of the New Works, wayleaves, material procurement and otherwise;
- 11.1.2 any other associated work and/or risks; and
- 11.1.3 all other costs and profit including those required by the Undertakers in connection with privately and publicly owned Apparatus and otherwise.

**12 Accommodation Works**

- 12.1 The Company shall obtain all permissions which are required to enable the Accommodation Works to proceed and shall consult and comply with relevant landowners, tenants, occupiers and other authorised users in connection with the provision of Accommodation Works as referred to in Appendix 1/15 to Part 4 of these New Works Requirements. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- 12.2 The Design shall ensure that Accommodation Works are completed as early as practicably possible during the New Works.
- 12.3 At least seven days prior to entering any areas of land, the Company shall provide written notice to the owner and occupier of the land advising of the proposed date of entry, together with a programme for completing all Accommodation Works on the land. The owner and occupier of the land shall be kept fully informed of the progress for completing any Accommodation Works.

**13 Public and Private Roads Accesses and Public and Private Rights of Way**

- 13.1 The Company shall consult and comply with Relevant Authorities in connection with alterations to public and private roads, accesses and public and private rights of way. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- 13.2 All public and private roads, accesses and public and private rights of way affected by the New Works shall be retained and maintained throughout the period of the New Works until alternative suitable means of access shall be provided by the Company.
- 13.3 Any diversions which the Company proposes shall be shown to cause minimum disruption to the end User.

Part 1: General Requirements

---

13.4 All construction procedures and equipment shall include adequate provision to ensure the safety of members of the public and others using public and private roads, accesses and public and private rights of way affected by the New Works.

13.5 Any agreement to alter a private road or access in any way shall be confirmed in writing by the Company with the appropriate landowners, occupiers and other authorised users and the Company shall be required to have such agreement in writing prior to any alteration to the road or access.

The Company shall assess the environmental impacts of the proposed changes to the New Works and ensure that all reasonable measures are taken to avoid or mitigate adverse environmental impacts.

A copy of any agreement together with supporting drawings shall be submitted to the Contracting Authority prior to the Company carrying out any such alterations.

## 14 Community Relationships and Public Liaison

14.1 The Company shall be deemed to be aware that within sections of the local communities in the vicinity of the New Works and within other groups there exists opposition towards the Design, construction and completion of the New Works which may manifest itself by public protests, vandalism, hindrance, disruption, site occupation, demonstrations, adverse publicity and otherwise.

14.2 In the event that such actions occur, the Company's rights and obligations in this regard shall be subject to the terms and provisions set out in this Agreement.

14.3 Where there is the requirement for the procurement of security industry services through any contract or subcontract the Company shall ensure that any contractor or subcontractor be registered with the Security Industry Authority (SIA) Approved Contractors Scheme for the category of service being provided / performed under the contract or subcontract. Additional information with suggested contractual language to be incorporated can be found in the "Scottish Procurement Policy Note SPPN 2/2010 dated 17th February 2010".

14.4 Notwithstanding any other provisions of this Agreement, throughout the duration of the Design, construction and completion of the New Works the Company shall consult and comply with Police Scotland on a regular and as necessary basis with regard to the security and protection of:

14.4.1 the New Works;

14.4.2 all persons entitled to be upon the New Works Site; and

14.4.3 the New Works Site.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

14.5 The Company shall implement liaison procedures as required by Part 8 to Schedule 2 of the Agreement, including a Community Liaison Officer and Community Liaison Team.

14.6 Notwithstanding the other requirements of this Agreement, the Company shall liaise with:

14.6.1 Traffic Scotland;

14.6.2 AA Roadwatch;

14.6.3 Radio Scotland;

Part 1: General Requirements

---

14.6.4 local roads networks; and

14.6.5 Traffic Link;

with regard to planned works, lane closures and exceptional lane closures.

## **15 Payment of Fees and Compliance with Undertakers and Other Owners of Apparatus**

15.1 The Company shall:

15.1.1 give all notices;

15.1.2 take all actions; and

15.1.3 pay all fees;

required to be given or paid by any statutory requirements in relation to the execution of the New Works and by the rules and regulations of Undertakers and other owners of Apparatus and/or Relevant Authorities whose property or rights are or may be affected in any way by the New Works.

## **16 Quality Assurance**

16.1 The Company shall institute and maintain a Quality System complying with the requirements of Schedule 5 for the purpose of ensuring and demonstrating that all aspects of the New Works are carried out fully in conformity with the relevant provisions of this Agreement.

## **17 General Road Safety Audit Requirements**

### **17.1 General**

17.1.1 Road Safety Audits shall be carried out in accordance with the DMRB as amended by the requirements below.

17.1.2 Road Safety Audit Certificates appropriate to each Road Safety Audit carried out shall be provided to the Contracting Authority as required by the Certification Procedure.

### **17.2 Safety Audit Team**

17.2.1 The Company shall request approval of the Road Safety Auditor, together with the names and curriculum vitae of the proposed Safety Audit Team, in accordance with the Certification Procedure.

17.2.2 Once approval of all the Road Safety Auditor and all prospective members is obtained, the Company shall appoint the Road Safety Auditor which will appoint the Safety Audit Team in accordance with paragraph 17.2.1.

17.3 For the purposes of the DMRB: HD 19 the "Project Sponsor" shall be construed in the Agreement as meaning the Company.

17.4 For the purposes of the Road Safety Audit procedures the "Director" shall be construed, in the case of Trunk Roads, in the Agreement as meaning:

Director of Major Transport Infrastructure Projects

Transport Scotland

Part 1: General Requirements

---

or other such person notified in writing by the Contracting Authority, and accordingly the final decision shall rest with him with respect to issues in any Exception Reports.

- 17.5 For the purposes of the Road Safety Audit procedures the “Director” shall be construed, in the case of Aberdeen City Council Side Roads, in the Agreement as meaning:

Head of Enterprise, Planning and Infrastructure

Aberdeen City Council

or other such person notified in writing by the Contracting Authority, and accordingly the final decision shall rest with him with respect to issues in any Exception Reports

- 17.6 For the purposes of the Road Safety Audit procedures the “Director” shall be construed, in the case of Aberdeenshire Council Side Roads, in the Agreement as meaning:

Head of Roads and Landscape Services

Aberdeenshire Council

or other such person notified in writing by the Contracting Authority, and accordingly the final decision shall rest with him with respect to issues in any Exception Reports

### **17.7 Stage 1 Road Safety Audit**

- 17.7.1 The Conceptual Design shall include a completed Stage 1 Road Safety Audit.

- 17.7.2 Any proposal by the Company to vary the Conceptual Design shall be the subject of a Stage 1 Road Safety Audit in accordance with the Certification Procedure.

### **17.8 Stage 2 Road Safety Audit**

- 17.8.1 The Design for the New Works shall, on its completion and before commencement of construction, be subject to a Stage 2 Road Safety Audit. The Stage 2 Road Safety Audit may be phased using the following zones of interest:

- (i) road layout, earthworks, drainage, services, Structures, and Accommodation Works;
- (ii) fencing and environmental barriers;
- (iii) road pavement, kerbs, footways and paved areas;
- (iv) road restraint systems;
- (v) signs, road markings, motorway communications and lighting; and
- (vi) environment and landscape.

- 17.8.2 These zones of interest may be further divided into packages for sections of the New Works if agreed in writing by the Contracting Authority.

- (i) The Company shall submit to the Safety Audit Team the following information relating to the parts of the Design Elements for each zone of interest where relevant:
- (ii) 1:500 scale plans of the road layout showing all junctions, including verges and extent of side slopes; and
- (iii) plans showing road restraint systems (vehicular and pedestrian), bridge parapets, walls, Structures, signs (including locations and indicating face and

Part 1: General Requirements

---

pole arrangements), road markings, lighting, service diversions, drainage layouts, kerbs, footways, and all other road side features.

- 17.8.3 The Company shall supply the Safety Audit Team with any further information it may request.
- 17.8.4 The Company shall not construct the parts of the Design or Design Element subjected to a Road Safety Audit until the recommendations of the Stage 2 Road Safety Audit report including, where appropriate:
- (i) alternative solutions to the safety issues raised by the Stage 2 Road Safety Audit which have been agreed by the Safety Audit Team; and
  - (ii) any decision of the Director, as defined in HD19 of the DMRB, with respect to issues detailed in the Exception Report, as defined in HD19 of the DMRB;

have been incorporated in the Design or Design Element.

### **17.9 Stage 3 Road Safety Audit**

- 17.9.1 The Company shall carry out a Stage 3 Road Safety Audit immediately prior to any part of the New Works to be opened to traffic without TTMS and prior to the Company issuing a Substantial Completion Certificate for the relevant part of the New Works. The Road Safety Audit Stage 3 shall be carried out in connection with the full extent of any part if the New Works proposed to be opened to traffic without TTMS and for issue of a Substantial Completion Certificate.
- 17.9.2 The Company shall include a Stage 3 Cycle Audit with the Stage 3 Road Safety Audit, as described in paragraph 19.4.
- 17.9.3 The Company shall be responsible for ensuring that representatives of:
- (i) the Contracting Authority;
  - (ii) the Police;
  - (iii) the Relevant Authority responsible for the connections to the side road network;
  - (iv) the Scottish Ministers Trunk Road North East Management Units, as appropriate; and
  - (v) the Designers;
- are invited to accompany the Safety Audit Team to offer their specialist views for the Stage 3 Road Safety Audit.
- 17.9.4 Notwithstanding any other requirements of the DMRB, any views or observations made at the Road Safety Audit Stage 3 by the Contracting Authority the Police and any Relevant Authority shall be recorded in the Road Safety Audit Stage 3.
- 17.9.5 Before any part of the New Works is opened to traffic without TTMS and before a Substantial Completion Certificate is issued, the Company shall incorporate into the New Works the recommendations of the Stage 3 Road Safety Audit report including, where appropriate:
- (i) alternative solutions to the safety issues raised by the Stage 3 Road Safety Audit which have been agreed by the Safety Audit Team; and

## Part 1: General Requirements

- (ii) any decision of the Director, as defined in HD19 of the DMRB, with respect to issues detailed in the Exception Report, as defined in HD19 of the DMRB.

**17.10 Stage 4 and Stage 5 Road Safety Audits (1 and 3 years after Completion)**

17.10.1 A Stage 4 and Stage 5 Road Safety Audit shall be carried out on all of the New Works in accordance with the DMRB.

17.10.2 A Stage 4 and Stage 5 Road Safety Audit report shall be prepared which include the following:

- (i) details of any specific safety problems identified through the traffic accident record analysis; and
- (ii) recommendations to address the problems highlighted.

17.10.3 The Company shall submit the Road Safety Audit Team's report in accordance with the DMRB to the Contracting Authority not later than 56 days following the end of the first and third years after completion.

17.10.4 The Company shall incorporate into the Design and the New Works those recommendations identified for its action in the Stage 4 and Stage 5 report including, but not limited to:

- (i) alternative solutions to the safety issues raised which have been agreed in writing by the Safety Audit Team; and
- (ii) any decision of the Director, as defined in HD19 of the DMRB, with respect to issues detailed in the Exception Report, as defined in HD19 of the DMRB.

17.10.5 Notwithstanding any other requirements of this Agreement, additional Design and works resulting from the recommendations of the Road Safety Audit Stage 4 and Stage 5 shall be carried out by the Company at its own expense.

**17.11 Road Safety Audits for Temporary Traffic Management Schemes**

17.11.1 Road Safety Audits Stage 2 and Stage 3 shall be carried out on Temporary Traffic Management Schemes that are judged by the Company, following discussions with:

- (i) Transport Scotland;
- (ii) Aberdeen City Council;
- (iii) Aberdeenshire Council; and
- (iv) the Police;

to be sufficiently complex or major to require audit. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

17.11.2 Notwithstanding the provisions of Section 17.7.1 the Company shall also undertake audits of TTMS wherever instructed to do so by the Contracting Authority

17.11.3 The general procedures are as described above and modified as follows:

- (i) Road Safety Audit Certificates appropriate to each Road Safety Audit carried out on Temporary Traffic Management Schemes shall be provided to the Contracting Authority as required by the Certification Procedure.

---

**Part 1: General Requirements**

---

- (ii) At Road Safety Audits Stage 3 for Temporary Traffic Management Schemes, the Temporary Traffic Management Scheme shall be implemented and audited out with peak times as described in Appendix 1/17 to Part 4 of these New Works Requirements.
- (iii) At the audit the Safety Audit Team shall advise the Company of any alterations required to the Temporary Traffic Management Scheme and these shall be implemented by the Company to the satisfaction of the Safety Audit Team within no more than 12 hours of receipt of that advice.

**17.12 Cycle Audit**

- 17.12.1 The Company shall carry out Stage 2 and Stage 3 Cycle Audits in compliance with the requirements of *Cycling by Design*, published by Transport Scotland in June 2010.
- 17.12.2 Where the Company proposes any deviation from the requirements of Section 1.8 and Appendix D of Part 2 of these New Works Requirements, the Company shall undertake a Stage 1 Cycle Audit in compliance with the requirements of *Cycling By Design* (Transport Scotland, June 2010).
- 17.12.3 The Company shall undertake the Stage 2 Cycle Audit prior to the construction of any cycle facilities and any affected Works.
- 17.12.4 The Company shall integrate the Stage 3 Cycle Audit with the Stage 3 Road Safety Audit as a supplementary procedure.

**18 Departures**

- 18.1 Where the Company proposes to incorporate a Departure within the Design of the New Works, the Company shall seek the formal approval in writing of the relevant Overseeing Organisation. The Overseeing Organisation for existing and proposed Trunk Roads shall be Transport Scotland, Trunk Roads and Bus Operations. The Overseeing Organisation for existing and proposed adopted public roads shall be Aberdeen City Council and Aberdeenshire Council within their respective local authority boundaries.
- 18.2 The Company may seek a Departure where it can be shown that the safety of the Users, operational effectiveness and Design life are not compromised and that the General Requirements contained in this Part 1 of these New Works Requirements shall still be satisfied.
- 18.3 Applications by the Company for a Departure shall be made in accordance with the Certification Procedure.
- 18.4 Where a potential departure from Standards for an Access Road relates to its interface with an adopted road, an application for that departure from Standards shall be made to the relevant Overseeing Organisation.

Where a potential departure from Standards for an Access Road does not interface with an adopted public road, the Participant shall consult with the Contracting Authority to confirm the required technical standards to be provided.

**19 Superintendence by Company**

- 19.1 Notwithstanding the other provisions of this Agreement the Company shall supervise and witness the construction and completion of the New Works, and such supervision shall be independent of the supervision of the Designer and the New Works Contractor. In doing so the Company shall ensure an adequate level of supervisory staff shall be present on the New Works Site at all times to carry out

## Part 1: General Requirements

- such supervision duties required under this Agreement commensurate with the level and type of construction works being carried out at any particular time.
- 19.2 Notwithstanding the other provisions of this Agreement, the Company shall ensure that the Designer shall supervise and witness the construction and completion of the New Works sufficient to permit the Designer to sign all the relevant Construction Certificates referred to in the Certification Procedure.
- 19.3 In doing so the Company shall ensure that the Designer has the minimum levels of supervisory staff referred to in paragraph 19.4. This shall be the minimum staffing levels for the Designer's supervision of the New Works and shall be in addition to the Company's and the New Works Contractor's supervisory staff on the New Works Site.
- 19.4 Notwithstanding the other provisions of this Agreement, the Company shall ensure that a minimum of 39 staff from the Designer's organisation(s), shall be based on the New Works Site at all times throughout the period of the construction and completion of the New Works unless otherwise consented to in writing by the Contracting Authority, as detailed in paragraph 19.5.
- 19.5 The minimum experience and qualifications for the Designer's organisation(s) on-site core witnessing and supervisory staff identified in paragraph 19.4 shall be as all of the following:
- 19.5.1 1 Number Designer's Site Representative (DSR);
- (i) a chartered civil engineer with a minimum of 15 years relevant experience of site supervision as a Designer's site representative within the Design, construction and completion process;
- 19.5.2 4 Number Designer's Deputy Site Representatives (DDSR)
- (i) chartered civil engineers with a minimum of 10 years relevant experience of site supervision as a Designer's site representative within the Design, construction and completion process;
- 19.5.3 10 Number Designer's Section Engineer Representatives (DSER);
- (i) civil engineers with a minimum of 5 years relevant experience of site supervision as a Designer's site representative within the Design, construction and completion process;
- 19.5.4 8 Number Designer's Assistant Engineer Representatives (DAER);
- (i) civil engineers with a minimum of 3 years relevant experience of civil engineering works;
- 19.5.5 8 Number experienced and competent engineering works inspectors/clerk of works;
- (i) minimum 5 years' experience in the supervision of large civil engineering projects. At least 3 Number inspectors shall have a minimum of 10 years' experience of supervision of Structures construction, at least 2 Number inspector shall have a minimum of 10 years' experience of supervision of pavement construction and at least 2 Number inspectors shall have a minimum of 10 years' experience of supervision of earthworks construction;
- 19.5.6 1 Number Designer's Site Environmental Co-ordinator (DSEC)
- (i) the DSEC shall be a suitably qualified environmental specialist with a minimum 10 years' experience of the supervision of environmental compliance of civil engineering construction works

## Part 1: General Requirements

- 
- 19.5.7 1 Number Designer's Site Landscape Advisor (DSLAs);
- (i) the DSLA shall be a suitably qualified chartered landscape architect with a minimum 5 years' experience in the supervision of the landscape works.
- 19.5.8 1 Number Designer's Site Ecological Advisor (DSEA);
- (i) the DSEA shall be a suitably qualified chartered ecologist with a minimum 5 years' experience in the supervision of ecological works.
- 19.5.9 5 Number Designer's Environmental Clerks of Works (DECWs);
- (i) minimum 3 years' experience in the supervision of environmental works. At least two DECW shall be experienced in the supervision of landscape works, and at least two DECW shall be experienced in the supervision of ecological works.
- 19.6 The Company shall not be permitted to commence any New Works without adequate representation on the New Works Site by the Designer's organisation(s).
- 19.7 In addition to and to support the Designer's supervisory staff detailed in paragraph 19.5, the Company shall also ensure that the Designers supervisory staff include the following as required during relevant periods of the Works:
- 19.7.1 2 Number suitably qualified geotechnical/geological Designer's Section Engineer Representatives, with a minimum of 5 years relevant experience of site supervision as a Designer's site representative within the Design, construction and completion process, supported by 4 Number suitably qualified geotechnical/geological Designer's Assistant Engineer Representatives, with a minimum of 3 years relevant experience of geotechnical/geological works, who shall supervise geotechnical and geological works, including ground improvement works and general earthworks, including rock excavation works;
- 19.7.2 1 Number suitably qualified chartered archaeologist, with a minimum of 5 years relevant experience, supported by 2 Number suitably qualified archaeologists with a minimum of 3 years relevant experience, who shall supervise compliance with all cultural heritage provisions of this Agreement;
- 19.7.3 1 Number suitably qualified chartered landscape architect with a minimum of 10 years relevant experience who shall attend the New Works Site regularly throughout the Establishment Period and report in accordance with sub-Clause 3001.14 of Volume 1 of the MCHW. Not more than two weeks after each visit the chartered landscape architect shall make written recommendations to the Company regarding deficiencies and opportunities for improving the landscape maintenance and exploiting environmental opportunities that become apparent during the Establishment Period to enhance biodiversity and reduce pesticide application. A copy of the chartered landscape architect's written recommendations shall be provided simultaneously to the Contracting Authority. The chartered landscape architect shall confirm, without limitation, the requirements for plant replacement, establishment of woodland, shrub and hedgerow planting and all seeded grassland and wildflower areas and remedial works associated with the landscape Design. The recommendations of the Company's chartered landscape architect shall be carried out by the Company; and
- 19.7.4 additional engineer(s) and inspector(s) and otherwise for specialist works during the periods when such specialist works shall be undertaken, each of whom shall have a minimum of 5 years' experience of site supervision of similar specialist works.
-

## **20 Sustainability, Energy and Carbon Management**

### **20.1 General Sustainability Roles and Responsibilities**

- 20.1.1 The Company shall appoint a person with suitable experience in the delivery of sustainability measures on major infrastructure projects to act as the sustainability manager for the New Works. The appointment of this person shall be subject to the written approval of the Contracting Authority.
- 20.1.2 The sustainability manager shall work with the Contracting Authority to develop, manage and maximise the delivery of sustainability initiatives as part of the Project.

### **20.2 Reporting**

- 20.2.1 The sustainability manager shall produce a sustainability progress report for discussion at the monthly progress meeting with the Contracting Authority. The sustainability progress report shall include but not be limited to the following:
- (i) information on progress in delivering sustainability objectives and targets through the tracking of agreed appropriate key performance indicators, throughout the period between the Effective Date and the date of the Final Completion Acceptance Notice issued by the Contracting Authority pursuant to Sub-Clause 26 of the Agreement; and
  - (ii) sustainable materials planning (to include a comparison between estimated material quantities and quantities actually used, with a monthly report on the progress in delivering targets).

### **20.3 Training, Communications and Awareness**

- 20.3.1 The Company shall develop a training and communications programme to ensure that all operatives, staff and sub-contractors are aware of the sustainability, energy and carbon management objectives and targets associated with the Project and their responsibilities in this regard, and of any Site-specific issues.
- 20.3.2 The training and communications programme shall cover all the relevant elements associated with the following areas:
- (i) Energy Management
  - (ii) the Sustainable Resource Management Framework;
  - (iii) the Materials Plan;
  - (iv) the Responsible Sourcing Code of Practice;
  - (v) the Code of Practice for the Sustainable Use of Soil;
  - (vi) the Green Travel Plan; and
  - (vii) biodiversity protection and enhancement.

### **20.4 Sustainability, Innovation and Best Practice**

- 20.4.1 The Company shall produce a project log during the construction and completion of the New Works that shall identify any lessons learned with regards to the use of sustainable measures and associated best practice techniques. The Company shall review such measures on a monthly basis in conjunction with the Contracting Authority, and shall take appropriate steps to improve the procedures and strategies associated with their implementation where appropriate. The outcomes from each monthly review shall be presented to the Contracting Authority as part of the sustainability project report defined in Section 20.2.

## Part 1: General Requirements

**20.5 Materials Specification**

20.5.1 The Company shall produce a Materials Register that sets out the key characteristics of the materials to be used within the New Works, including, but not limited to:

- (i) sourcing;
- (ii) durability;
- (iii) recyclability;
- (iv) ease of disassembly;
- (v) hazardous properties; and
- (vi) maintenance requirements.

20.5.2 This register will form the basis of addressing the following objectives:

- (i) to minimise to the extent reasonable and practicable throughout the New Works the amount of materials used, maximise the re-use of materials and prevent the unnecessary production of waste;
- (ii) to minimise to the extent reasonable and practicable the contribution made to the depletion of finite resources from the materials used throughout the New Works;
- (iii) to minimise to the extent reasonable and practicable throughout the New Works the use of hazardous materials and the impacts of any used; and
- (iv) to maximise to the extent reasonable and practicable throughout the New Works the use of materials and components that can be readily disassembled and re-used.

20.5.3 The Company shall register with the Zero Waste Scotland programme within a month of the Commencement Date, and work with Zero Waste Scotland to identify opportunities for optimising the use of recycled materials in the New Works.

20.5.4 The Company shall harmonise materials use with the Waste Management Plan in order to maximise the re-use of materials on the New Works Site.

**20.6 Materials and Resource Sourcing**

20.6.1 The Company shall produce a Responsible Sourcing Code of Practice for the New Works based on the BRE Sustainability Standard – BES 6001: Issue 2 Framework Standard for the Responsible Sourcing of Construction Products. This shall set out key principles and guidance in relation to supply chain management, stakeholder engagement, management systems and site stewardship relevant to the New Works.

20.6.2 The Company shall ensure that the Responsible Sourcing Code of Practice is in place within one month of the Effective Date and continually implemented until the date of the Final Completion Acceptance Notice issued by the Contracting Authority pursuant to Clause 26 of the Agreement and that it is implemented and adhered to. The code of practice shall ensure that the following objectives are met:

- (i) to source all materials responsibly; and
- (ii) to ensure that all timber-based products (either temporary or permanent) are sourced from Forest Stewardship Council certified (or equivalent) sustainably managed forests.

---

**Part 1: General Requirements**

---

**20.7 Transportation of Materials**

- 20.7.1 The Company shall prepare a materials transportation strategy that shall ensure that the impacts of transport caused by the transportation of materials to and from the New Works Site are kept to a minimum.
- 20.7.2 The Company shall give consideration to more sustainable forms of freight transport, including transportation by rail or sea. Where freight is to be transported by road, the Company shall demonstrate, where required by the Contracting Authority, that due consideration has been given to efficient route planning.

**20.8 Storage and Handling of Materials**

- 20.8.1 The Contractor shall produce, as part of the Waste Management Plan, a soil and associated materials handling and management plan to minimise the impact of soil and materials storage and handling on the environment. This shall be based on the Code of Practice for the Sustainable Use of Soil published by DEFRA in 2009.
- 20.8.2 The Contractor shall:
- (i) clearly identify all soil resources, grades of earthworks, fill and aggregate materials;
  - (ii) design appropriate storage areas for each category of soil, fill and aggregate material;
  - (iii) plan the location of storage areas to minimise transportation movements on the Site;
  - (iv) screen designed storage areas for environmental risk;
  - (v) ensure all stockpiles have suitably designed protection (e.g. seeding to prevent erosion); and
  - (vi) find a sustainable use for any surplus soils on the Site (both topsoil and subsoil).
- 20.8.3 The Company shall use appropriate storage methods for any construction materials.
- 20.8.4 The Company shall, where reasonable and practicable, select plant for use on Site which minimises the environmental impacts experienced. The impacts to be considered include, but are not limited to, material transfer, compaction and waterlogging.
- 20.8.5 The Company shall clearly explain and communicate the Code of Practice for the Sustainable Use of Soil and accompanying method statement to all relevant staff. Compliance with this code shall be checked and verified by the Company.

**20.9 Carbon Footprint Calculations**

- 20.9.1 The Company shall calculate an embodied carbon footprint for the New Works and this shall seek to better the agreed baseline carbon footprint calculated for the new Works.
- 20.9.2 The Company shall utilise and maintain the carbon calculator contained within the Transport Scotland Carbon Management System ("CMS") to monitor the embodied carbon footprint of the New Works.
- 20.9.3 During the construction and completion of the New Works, the Company shall track any deviations from the estimated carbon footprint calculated. Should any deviation

---

**Part 1: General Requirements**

---

occur which increases the carbon footprint being generated, the Company shall, to a reasonable and practicable extent, take appropriate actions to generate a corresponding reduction in the footprint.

**20.10 Energy Management**

20.10.1 The Company shall consider the energy consumption of the New Works during construction and formulate an energy management plan. This shall demonstrate actions taken to:

- (i) use energy efficient plant (after consideration of the use and maintenance of construction plant); and
- (ii) run an energy efficiency programme on Site (e.g. eliminating unnecessary heating, switch-off campaigns etc.).

20.10.2 The Company shall maintain all construction plant and ancillary equipment to maximise fuel efficiency and minimise as far as practicable carbon emissions.

20.10.3 The Company shall explore opportunities for using energy derived from renewable (i.e. low- or zero-carbon) resources during construction and where practicable implement them.

**20.11 Renewable Energy Strategy**

20.11.1 The Company shall develop an operational energy Plan detailing the energy requirements for the execution and completion of the New Works.

**20.12 Waste Management**

20.12.1 The Company shall, as part of the Waste Management Plan, produce an SWMP as specified in Schedule 5 of the Agreement. This shall cover all the regulatory and best practice requirements relating to the planning and delivery of Site waste management.

20.12.2 The Company shall have a specific documented approach to waste minimisation that will feature in the SWMP to ensure that no unnecessary waste arisings go to landfill. This will contain targets to reduce, re-use and / or recycle waste.

20.12.3 The Company shall, to the extent reasonable and practicable, ensure that effective waste minimisation and management shall also be delivered. Where appropriate, this shall be achieved through any arrangements made with Zero Waste Scotland.

**20.13 Water Management During Construction**

20.13.1 The Company shall consider the use of a rainwater recovery system in the design of the main construction compound and any satellite compounds required to facilitate the New Works. The design of this system shall include features to recover rainwater from all roofs and hardstandings. Where the implementation of such a system is not deemed viable, the Company shall justify the grounds for this decision in writing and seek agreement from the Contracting Authority in writing.

**21 Payment of Electrical Energy Charges**

21.1 The Company shall be responsible for payment of any electrical energy charges in relation to its own facilities, construction plant and equipment, long term and temporary office accommodation and compounds.

Part 1: General Requirements

---

**22 Health and Safety**

- 22.1 In support of its approach to health and safety, the Company shall undertake the following in respect of the New Works:
- 22.1.1 The Company shall implement a behavioural safety programme for all personnel involved in delivery of the New Works Requirements with at least as great a focus on identifying unsafe conditions and safe behaviours as on identifying unsafe behaviours;
- 22.1.2 The Company shall be a member of the Constructing Better Health (CBH) scheme or equivalent, and shall use its best endeavours to ensure that all subcontractors of any tier involved in delivery of the New Works Requirements hold equivalent membership. The Company shall ensure that the CBH Standards for workplace health management, fitness for task assessment of safety critical and non safety critical personnel in line with the CBH Health Assessment Matrix, or equivalent, are implemented for personnel involved in delivery of the New Works Requirements, and that outcomes from the Health Checks are recorded in the CBH National Database or equivalent. The Company shall ensure that personnel undertaking duties within the New Works Site are registered with CBH or equivalent, and are issued with a CBH card, or equivalent;
- 22.1.3 The Company shall adopt the principles of the UK Contractors Group in respect of worker engagement, or equivalent, and shall use its best endeavours to ensure that all subcontractors of any tier involved in delivery of the New Works Requirements adopt these principles or equivalent. The Company shall ensure that worker engagement is supported at project, workgang and individual levels;
- 22.1.4 The Company shall ensure that personnel undertaking duties on the New Works Site have achieved particular levels of competence relevant to their role, as noted below:
- (i) All workers: To hold a Construction Skills Certification Scheme (CSCS) or CSCS Affiliate Card or equivalent. Workers involved in Scottish Water potable water elements of the project shall also hold National Water Hygiene Scheme and DOMS cards or equivalent;
  - (ii) Supervisors: Construction Skills Site Supervisor Safety Training Scheme or the Institution of Occupational Safety and Health (IOSH) Supervising Safely or equivalent;
  - (iii) Managers: Construction Skills Site Management Safety Training Scheme or IOSH Managing Safely or equivalent; and
  - (iv) Directors: IOSH Safety for Senior Executives or IOSH Directing Safely or equivalent.
- 22.1.5 The Company shall develop leading and lagging key performance indicators in respect of its health and safety activities, and shall monitor and report on performance against these key performance indicators on a monthly basis.

| 2.1  | General.....                                                                                        | 108 |
| 2.2  | Location and Description of Structures .....                                                        | 109 |
| 2.3  | Design Loading.....                                                                                 | 109 |
| 2.4  | Design Headroom.....                                                                                | 109 |
| 2.5  | Road Cross Section at Structures.....                                                               | 109 |
| 2.6  | Parapets and Environmental Barriers .....                                                           | 109 |
| 2.7  | Structural Form .....                                                                               | 110 |
| 2.8  | Structural Finish.....                                                                              | 115 |
| 2.9  | Service Ducts.....                                                                                  | 116 |
| 2.10 | Structural Drainage .....                                                                           | 117 |
| 2.11 | Verges, Side Slopes and Paved Areas .....                                                           | 119 |
| 2.12 | Durability.....                                                                                     | 120 |
| 2.13 | Maintenance and Inspection .....                                                                    | 126 |
| 2.14 | Reinforced Soil.....                                                                                | 128 |
| 2.15 | Corrugated Steel Buried Structures .....                                                            | 129 |
| 2.16 | Fill to Structures .....                                                                            | 129 |
| 2.17 | Existing Structures .....                                                                           | 129 |
| 2.18 | Removal and Replacement of Existing Waterproofing.....                                              | 131 |
| 2.19 | Construction Tolerances in Structural Concrete.....                                                 | 132 |
| 2.20 | Road Lighting.....                                                                                  | 132 |
| 2.21 | Structures Design Statement .....                                                                   | 132 |
| 2.22 | As Built Records.....                                                                               | 133 |
| 3    | Additional Requirements for Particular Structures .....                                             | 134 |
| 3.1  | Structure PS01 – B979 Netherley Road Overbridge.....                                                | 134 |
| 3.2  | Structure PS03 – U89K Auquorthies to Ury Road NMU Underpass .....                                   | 134 |

## Part 2 Specific Requirements

|      |                                                                         |     |
|------|-------------------------------------------------------------------------|-----|
| 3.3  | Structure PS11 – Blaikiewell Burn Underbridge.....                      | 134 |
| 3.4  | Structure PS13 – Kingcausie Wildlife Overbridge.....                    | 134 |
| 3.5  | Structure PS15 – River Dee Crossing.....                                | 135 |
| 3.6  | Structure PS16 – Milltimber Brae Overbridge .....                       | 135 |
| 3.7  | Structure RW01 – Milltimber Retaining Wall .....                        | 136 |
| 3.8  | Structure RW02 – Kippie Lodge Retaining Wall .....                      | 136 |
| 3.9  | Structure PS21 – C127K Wester Ord to Blacktop Road Underbridge .....    | 136 |
| 3.10 | Structure PS33 – North Kingswells Junction Underbridge .....            | 136 |
| 3.11 | Structure PS38 – BP Pipeline Protection Structure.....                  | 137 |
| 3.12 | Structure PS39 – Shell Pipeline Protection and NMU Underpass.....       | 137 |
| 3.13 | Structure PS40 – Kirkhill Wildlife Overbridge .....                     | 137 |
| 3.14 | Structure PS41 – Kirkhill Overbridge.....                               | 138 |
| 3.15 | Structure PS41A – Bogenjoss Burn Underbridge .....                      | 138 |
| 3.16 | Structure PS43 – Shell Pipeline Protection and Farm Underpass .....     | 138 |
| 3.17 | Structure PS44 – C55C Pitmedden Road Underbridge .....                  | 139 |
| 3.18 | Structure PS45 – Aberdeen to Inverness Railway Underbridge.....         | 139 |
| 3.19 | Structure PS46 – River Don Crossing.....                                | 139 |
| 3.20 | Structure PS49 – Parkhill Aqueduct.....                                 | 140 |
| 3.21 | Structure PS52 – Formartine and Buchan Way NMU Underpass 1 (A947) ..... | 140 |
| 3.22 | Structure PS55 – Formartine and Buchan Way NMU Underpass 2 (A90) .....  | 140 |
| 3.23 | Structure PS58 – Lochgreens Access Road Overbridge .....                | 141 |
| 3.24 | Structure PS63 – Blameddie Junction Underbridge.....                    | 141 |
| 3.25 | Structure PS64 – Kier Farm Underpass.....                               | 141 |
| 3.26 | Structure PS65 – South Orrock Farm Underpass .....                      | 141 |
| 3.27 | Structure PS66 – Orrock Road Overbridge.....                            | 142 |
| 3.28 | Structure PS67 – Dambrae Farm Underpass .....                           | 142 |
| 3.29 | Structure PS68 – Aikenshill Farm Underpass .....                        | 142 |
| 3.30 | Structure PS69A – Foveran Burn Underbridge .....                        | 142 |
| 3.31 | Structure PS73 – Shell Pipeline Crossing Mainline.....                  | 142 |
| 3.32 | Structure PS74 – Shell Pipeline Crossing Access Track.....              | 142 |
| 3.33 | Structure PS75 – BP Pipeline Crossing Bridgend Access .....             | 143 |
| 4    | Not Used.....                                                           | 144 |
| 5    | Settlement .....                                                        | 146 |

| 6.12                                                                                                                           | Traffic Noise and Vibration.....                                                         | 160 |
| 6.13                                                                                                                           | Landform and Grading Design Requirements.....                                            | 161 |
| 6.14                                                                                                                           | Earthworks Bunds / False Cuttings .....                                                  | 162 |
| 6.15                                                                                                                           | Additional Landform Integration .....                                                    | 163 |
| 6.16                                                                                                                           | Rock Cuttings: Environmental Design Requirements.....                                    | 163 |
| 6.17                                                                                                                           | General Landscape Design Requirements .....                                              | 164 |
| 6.18                                                                                                                           | Protection of Existing Vegetation .....                                                  | 166 |
| 6.19                                                                                                                           | Protection from Wind and Windthrow.....                                                  | 167 |
| 6.20                                                                                                                           | Planting Design.....                                                                     | 167 |
| 6.21                                                                                                                           | Management of Existing Vegetation .....                                                  | 169 |
| 6.22                                                                                                                           | Grass and Herbaceous Vegetation General Design Requirements .....                        | 170 |
| 6.23                                                                                                                           | Programme and Method Statements .....                                                    | 170 |
| 6.24                                                                                                                           | Site Attendance.....                                                                     | 171 |
| 6.25                                                                                                                           | Contamination and Mitigation.....                                                        | 171 |
| 6.26                                                                                                                           | Materials Reuse and Waste Management .....                                               | 173 |
| APPENDIX A - AMENDMENTS TO THE DMRB AND THE MCHW .....                                                                         |                                                                                          | 174 |
| APPENDIX B - CONSULTATION MATRIX.....                                                                                          |                                                                                          | 180 |
| APPENDIX C - DEPARTURES FROM STANDARDS PROFORMAS .....                                                                         |                                                                                          | 198 |
| APPENDIX D - DRYSTONE WALLS REQUIRED FOR LANDSCAPE AND VISUAL MITIGATION .....                                                 |                                                                                          | 206 |
| APPENDIX E - AESTHETIC REQUIREMENTS FOR NOISE BARRIERS.....                                                                    |                                                                                          | 210 |
| APPENDIX F - PROCEDURE FOR DEMONSTRATING COMPLIANCE WITH THE JUNCTION<br>REQUIREMENTS AND JUNCTION PERFORMANCE INDICATORS..... |                                                                                          | 218 |
| APPENDIX G - CONTRACT JUNCTION COMPLIANCE TRAFFIC MODELS AND ASSOCIATED<br>INSTRUCTIONS AND ANALYSIS WORKBOOKS .....           |                                                                                          | 226 |
| APPENDIX H - REQUIREMENTS FOR PRINCIPAL STRUCTURES.....                                                                        |                                                                                          | 232 |
| APPENDIX I - NOT USED .....                                                                                                    |                                                                                          | 360 |
| APPENDIX J - PROCEDURE FOR STRUCTURES ASSESSMENT.....                                                                          |                                                                                          | 362 |
| APPENDIX K1 - STRUCTURES DESIGN STATEMENT.....                                                                                 |                                                                                          | 366 |
| (NEW WORKS).....                                                                                                               |                                                                                          | 366 |
| APPENDIX K2 - STRUCTURES DESIGN STATEMENT.....                                                                                 |                                                                                          | 420 |
| APPENDIX L - REINFORCED SOIL DIMENSIONAL TOLERANCES AND DEFORMATION LIMITS.....                                                |                                                                                          | 442 |
| APPENDIX M – NOT USED .....                                                                                                    |                                                                                          | 446 |
| APPENDIX N - REQUIREMENTS FOR PRIVATE WATER SUPPLIES (PWS).....                                                                |                                                                                          | 448 |
| APPENDIX O - CONTAMINATION AND MITIGATION.....                                                                                 |                                                                                          | 470 |
| APPENDIX P - HYDROGEOLOGICAL AND HYDROLOGICAL MONITORING OF SENSITIVE<br>ENVIRONMENTAL SITES (SES) .....                       |                                                                                          | 474 |

Part 2 Specific Requirements

---

**1 Roads****1.1 General**

## 1.1.1 Design Speeds

- (i) The Design speeds to be adopted for the purpose of alignment Design shall be as shown in Table 1 of Schedule 19 of the Agreement.

## 1.1.2 Design Standards

- (i) Notwithstanding the other provisions of this Agreement, the Design of all new roads as described in Table 1 of Schedule 19 of the Agreement, with the exception of Accommodation Works Access Tracks, shall be in accordance with the DMRB unless noted otherwise.
- (ii) The Design shall be subject to the written acknowledgement of receipt by the Contracting Authority as required by the Certification Procedure.
- (iii) No affected part of the New Works shall commence until the appropriate Certification Procedures have been completed.
- (iv) The Company shall consult and comply with the requirements of:
  - (a) Aberdeen City Council; or
  - (b) Aberdeenshire Council;

as appropriate in connection with the Design for the Side Roads, as described in Table 1 of Schedule 19 of the Agreement.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

## 1.1.3 Cross Sections

- (i) Carriageway dimensions shall be as described in Table 1 of Schedule 19 of the Agreement.
- (ii) Changes in cross section between existing roads and the cross-section requirements of new roads as described in Table 1 of Schedule 19 of the Agreement shall be effected smoothly over a length sufficient for road Users to naturally follow the alignment of the lane lines ahead and to negotiate and adjust position relative to vehicles in adjacent lanes.

## 1.1.4 Horizontal Alignment

- (i) Subject to the other requirements of this Agreement the horizontal road geometry Design shall comply with the relevant design speed as described in Table 1 of Schedule 19 of the Agreement.
- (ii) The Design shall ensure that the horizontal alignment for all All Purpose Roads, Side Roads, Accommodation Works Access Tracks, New Access Roads / Tracks, New Means of Access, footways and cycle tracks and otherwise shall extend as a minimum to the Reference Points described in Table 1 and Table 2 of Schedule 19 of the Agreement and shown on the Reference Drawings and shall tie-in with the existing road network at or beyond these Reference Points.

## 1.1.5 Vertical Alignment

## Part 2 Specific Requirements

- (i) Subject to the other requirements of this Agreement the vertical road geometry Design shall comply with the relevant design speed described in Table 1 of Schedule 19 of the Agreement.
- (ii) The Design shall ensure that the vertical alignment for all All Purpose Roads, Side Roads, Accommodation Works Access Tracks, New Access Roads / Tracks, New Means of Access, footways and cycle tracks and otherwise shall extend as a minimum to the Reference Points described in Table 1 and Table 2 of Schedule 19 of the Agreement and shown on the Reference Drawings and shall tie-in with the existing road network at or beyond these Reference Points.
- (iii) The vertical alignment of the main carriageway will need to account for specific requirements to ensure commitments given during scheme promotion are delivered as follows:
  - (a) In the Stoneyards area on the Balmedie – Tippetty section the top level of the bund / noise barrier adjacent to the northbound carriageway shall not exceed the following levels in order to maintain views from adjacent property:
 

|               |            |
|---------------|------------|
| Chainage 2900 | 72.70m AOD |
| Chainage 3000 | 72.00m AOD |
  - (b) In the Kirkhill area on the Balmedie – Tippetty section the top level of the bund/noise barrier adjacent to the northbound carriageway shall not exceed the following levels in order to maintain views from adjacent property:
 

|               |            |
|---------------|------------|
| Chainage 4450 | 67.10m AOD |
| Chainage 4500 | 66.00m AOD |
| Chainage 4550 | 65.90m AOD |
  - (c) At the Old Deeside Line in the Milltimber area of the AWPR Southern Leg the level of the main carriageway shall be such that it shall not preclude a clearance envelope of 6.45m to any future provision of a railway bridge across the AWPR in support of the re-opening of the Old Deeside railway line.

## 1.1.6 Side Roads

- (i) The Design of Side Roads shall be in accordance with the DMRB, Table 1 of Schedule 19 of the Agreement and the requirements of:
  - (a) Aberdeen City Council; and
  - (b) Aberdeenshire Council;
 as appropriate.
- (ii) Where short lengths of Side Roads form part of the New Works, unless otherwise described in Table 1 of Schedule 19 of the Agreement, the minimum cross section shall be equivalent to that of the existing road, with a minimum verge width of 2.5 metres.

## 1.1.7 New Access Roads/Tracks and Accommodation Works Access Tracks

- (i) The Design of all New Access Roads/Tracks as described in Table 1 of Schedule 19 of the Agreement, and Accommodation Works Access

## Part 2 Specific Requirements

Tracks, shall include horizontal radii, vertical radii and curve widening to accommodate a combine harvester and trailer (minimum 19.020 metres long) and a farm tractor and hay wagon (minimum 19.020 metres long) except where otherwise specified in clause 1.1.7 (iv).

The maximum permissible vertical gradient for New Access Roads/Tracks, as described in Table 1 of Schedule 19 of the Agreement, and Accommodation Works Access Tracks as identified in Appendix 1/15 shall be 8% unless specifically consented to by the Contracting Authority or Land Owner respectively. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement. Where New Access Roads/Tracks as identified in Table 1 of Schedule 19 of the Agreement, and Accommodation Works Access Tracks as identified in Appendix 1/15 shall be used by Non-Motorised Users, the maximum gradients identified in paragraph 1.8.2 shall be applied.

- (ii) New Access Roads/Tracks shall also be provided, as required, to give access to settlement, attenuation and storage ponds and otherwise in accordance with Section 1.5.
- (iii) Where New Access Road/Tracks are of access construction type AR3 as permitted in paragraph 1.7.5 Table 1C and connect to new or existing roads constructed from bound materials they shall be formed as AR1 or AR2 for a longitudinal distance of 10 metres from the connection with the new or existing road.
- (iv) At the New Access Roads/Tracks at Reference Points D95 to D96, D93 to D94, D97 to D98, and D99 to D100 the Design shall include horizontal radii, vertical radii and curve widening to accommodate an articulated vehicle with 7 axles (axle spacing of 1.3m on the trailer), 20m in length, approx. 3.5m wide with a gross weight of 80 tonnes. The Company shall consult and comply with the Forestry Commission in respect of this proposal.

#### 1.1.8 New Means of Accesses

- (i) In addition to any other provisions of this Agreement the provision of New Means of Access shall be in accordance with Table 3 of Schedule 19 of the Agreement.
- (ii) the Design shall ensure that:
  - (a) a longitudinal gradient of between 2.5% and 4% shall be provided on all accesses over a minimum length of 6 metres from either the adjacent or reference carriageway edge;
  - (b) unless specified otherwise in Schedule 19 all accesses shall be a minimum of 4 metres wide and shall incorporate a 1 metre minimum verge width on each side of the access;
  - (c) where a new access is replacing an existing access, the width of the new access and verges shall not be less than the existing widths;
  - (d) accesses shall extend from the edge of either the adjacent or reference carriageway for a minimum length of 10 metres or to either the adjacent or reference road boundary, whichever shall be the greater; and

## Part 2 Specific Requirements

- (e) The accesses shall be formed with the same materials and construction depth as the adjacent road.

## 1.1.9 Junction Design

- (i) The Design for junctions between roads including, but not limited to, those described in Table 1 of Schedule 19 of the Agreement and all accesses including, but not limited to, agricultural accesses and other roads controlled by Relevant Authorities shall be in accordance with the DMRB.
- (ii) Junctions shall have sufficient capacity to satisfy the junction performance criteria specified in Appendix F and Appendix G.
- (iii) Notwithstanding the requirements of paragraph 1.1.9 (ii), junctions shall be designed and operated to minimise future delay and disruption to road Users.
- (iv) Existing traffic movements shall be maintained and provision made to link the existing and new road infrastructures.
- (v) Notwithstanding the requirements of paragraph 1.1.9 (ii), the Design of merges and diverges for grade separated junctions shall as a minimum provide the geometric parameters for Rural Motorways, as described in Tables 4/3 and 4/4 of TD 22 of the DMRB, subject to the exceptions noted below:
  - (a) The Design of merges and diverges for the grade separated junction at A90 Blackdog Junction shall as a minimum provide the geometric parameters for Rural All Purpose roads, as described in Tables 4/3 and 4/4 of TD 22 of the DMRB.
- (vi) Major junctions to be provided are:
  - (a) A90 Stonehaven Junction;
  - (b) A956 Charleston Junction;
  - (c) A90 Cleanhill Junction;
  - (d) A90 Milltimber Junction (including connection to and junction with the A93);
  - (e) A90 South Kingswells Junction;
  - (f) A90 North Kingswells Junction (including connection to and junction with C89C Chapel of Stonywood to Fairley Road (2));
  - (g) A90 Craibstone Junction (including connection to and junctions with A96 and C89C Chapel of Stonywood to Fairley Road, and the junction between the A96, Dyce Drive and Craibstone College Access Road (North));
  - (h) A90 Goval Junction (including connections to and junctions with the realigned A947 and the B977 Echt to Balmedie Road(s));
  - (i) A90 Blackdog Junction;
  - (j) A90 Balmedie Junction;
  - (k) A90 Newburgh Road Junction; and
  - (l) A90 Tippetty Junction.

## 1.1.10 Police Observation Platforms

## Part 2 Specific Requirements

- (i) The Company shall consult and comply with the requirements of Police Scotland in respect of the location and layout of police observation platforms should they be required.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (ii) Police observation platforms shall conform with TA66/95 Type 2 or Type 3 should they be required.

#### 1.1.11 Maintenance Crossover Points

- (i) The Design shall include maintenance crossover points on the A90 AWPR and A956 AWPR as required, to permit the transfer of one Lane of traffic from one carriageway to the other in contraflow at a Design speed of 85 kph. A maintenance crossover point shall also be provided on the A956 east of Charleston Junction to permit the transfer of one Lane of traffic from one carriageway to the other in contraflow at a Design speed of 50 kph.
- (ii) The Company shall consult and comply with the requirements of Transport Scotland Trunk Road and Bus Operations and the relevant local roads authority as appropriate in respect of the locations of such crossovers.

#### 1.1.12 Lay-bys and Bus Lay-bys

- (i) An emergency lay-by shall be provided for each carriageway at a point between each new junction on new Special Roads and Trunk Roads

##### Fastlink

- Ch.2250 Both directions
- Ch.4850 Both directions
- Ch.7300 Both directions
- Ch.9050 Both directions

##### Southern Leg – Cleanhill to Charleston

- Ch.202900 Eastbound
- Ch. 202950 Westbound
- Ch.205400 Both Directions

##### Southern Leg – Cleanhill to North Kingswells

- Ch.105550 Southbound
- Ch. 105650 Northbound
- Ch.110300 Both Directions

##### Northern Leg –North Kingswells to Blackdog

- Ch.319700 Southbound
- Ch.319800 Northbound
- Ch.327950 Both directions

- (ii) General use lay-bys shall be provided on the Balmedie – Tippetty section at:

- (a) Ch 900 northbound;

## Part 2 Specific Requirements

- (b) Ch 1200 southbound;
  - (c) Ch 3000 southbound;
  - (d) Ch 3100 northbound;
  - (e) Ch 5700 southbound; and
  - (f) Ch 5900 northbound.
- (iii) Bus lay-bys shall be provided on:
- (a) the northbound diverge slip road and southbound merge slip road at A90 Blackdog Junction;
  - (b) the northbound merge slip road and southbound diverge slip road at A956 Charleston Junction; and
  - (c) on Dyce Drive northbound at the new signalised junction between Dyce Drive and the A96.
- (iv) Bus lay-bys shall comply with "Transport Scotland Disability Discrimination Act Good Practice Guide for Roads"
- (v) The Company shall consult and comply with the requirements of:
- (a) Aberdeen City Council;
  - (b) Aberdeenshire Council; and
  - (c) Bus service operators.
- as appropriate in connection with the Design for the Bus Lay-bys.
- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (vi) The existing northbound and southbound bus lay-bys on the A90 at Bridgend, Tipperty, and associated provisions (footpaths, kerbs, signs, bus shelters etc.), shall be retained in their entirety.
- (vii) Bus stops shall be provided on:
- (a) the westbound side of Eigie Road in Balmedie, comprising a Commutaports Cairngorm style, or equivalent, style bus shelter (3 bay enclosed with solar powered lighting and full size timetable case), sign, hardstanding and Kassel kerbs.
  - (b) the eastbound side of Eigie Road in Balmedie, comprising a Commutaports Cairngorm style, or equivalent, style bus shelter (3 bay enclosed with solar powered lighting and full size timetable case), sign, hardstanding and Kassel kerbs.
- (viii)

#### 1.1.13 Closure and Stopping up of existing Roads, Junctions, Accesses and Otherwise

- (i) Where closure of existing roads, junctions, accesses and otherwise shall be required by the Design or the Road Orders listed in Schedule 9 to the Project Agreement, the Design shall include, but shall not be limited to, the removal of existing hard materials and other features followed by reinstatement in materials and levels to match the adjacent existing verge, with the inclusion of suitable drainage.

## Part 2 Specific Requirements

- 
- (ii) The Design shall ensure that fencing and gates, associated with the closure of existing roads, junctions and accesses, are provided as appropriate to complement the requirements of Appendix 1/15 to Part 4 of these New Works Requirements.
  - (iii) The Design shall ensure that roadmarkings, signing and studs shall be removed to a suitable distance in advance of the end of any road stopped up as part of the New Works. Where appropriate they shall be replaced with suitable new roadmarkings and signing.
  - (iv) The Company shall consult and comply with the requirements of:
    - (a) Aberdeen City Council; or
    - (b) Aberdeenshire Council.as appropriate in connection with the Design for the 1.1.13 (iii)

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

## 1.1.14 Carriageway Tie-ins

- (i) The Design shall allow for the safe transition between new and existing carriageways.
- (ii) The tie-in Design shall be unique for the location with particular reference to road widths, design speed, alignment curvature and sight distances together with road markings, surface texture, signing and any other relevant Design criteria.
- (iii) Tie-ins to existing roads shall have verge widths as described in Table 1 of Schedule 19 of the Agreement to a point 10 metres from the limit shown on the Reference Drawings and thereafter the width shall taper linearly to the existing verge width.
- (iv) The Design for the carriageway at tie-ins to existing shall ensure a smooth horizontal and vertical alignment.
- (v) Where necessary the carriageway shall incorporate a taper of 1 in 20 to tie into the existing Side Road at the limit of the new Side Road construction.

## 1.1.15 Visibility Envelopes

- (i) The Design for visibility envelopes shall ensure that they have a layout and suitable surface to permit cyclic maintenance cutting of grass or other vegetation.
- (ii) Visibility envelopes shall not be obstructed by proposed or existing bridges, signing, landscaping. In addition, visibility envelopes on Side Roads shall not be obstructed in maintained areas of the verges and side slopes by grass to a height of 200mm; and in un-maintained areas of the verges and side slopes by grass to a height of 500mm and otherwise. Side Road maintained areas shall be a strip of verge and/or side slope one metre in width measured from the carriageway edge. Side Road un-maintained areas shall be areas of verge and/or side slopes out-with the maintained area.
- (iii) The Company shall consult and comply with the requirements of:
  - (a) Aberdeen City Council; or

Part 2 Specific Requirements

---

(b) Aberdeenshire Council;

as appropriate in connection with the Design for the Visibility envelopes across side slopes and verges.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

#### 1.1.16 Turning Areas

(i) The Design shall include for turning areas at the ends of any New Access Roads/Tracks to any settlement, attenuation and storage ponds and otherwise.

(ii) Turning areas pavement shall be designed to the same standard as the adjacent road.

(iii) The Company shall consult and comply with the requirements of:

(a) Aberdeen City Council; or

(b) Aberdeenshire Council.

as appropriate in connection with the Design for the turning areas on Side Roads.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

#### 1.1.17 New Footways, Footpaths and Cycle Tracks

(i) The Design shall incorporate provision for the use of either existing or new roads and new footways and cycle tracks as described in Table 2 to Schedule 19 of the Agreement by non-motorised users. This shall include signing, dropped kerbing, road markings and otherwise.

(ii) Footways, footpaths and combined footway / cycle tracks in the New Works shall be designed, so far as is reasonably practicable, in accordance with "Transport Scotland, Disability Discrimination Act Good Practice Guide for Roads" and shall take into account mitigation measures in the Environmental Assessment Documents.

(iii) The Company shall apply the principles of Secured by Design to the design of temporary and permanent footpaths, cycle tracks and underpasses.

(iv) The Company shall consult and comply with the requirements of:

(a) Police Scotland Crime Prevention Design Advisor;

(b) Aberdeen City Council; and

(c) Aberdeenshire Council.

as appropriate, in connection with the above sub-clause.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

(v) Combined footway / cycle tracks shall also be designed in accordance with TA90 of the DMRB and "Cycling by Design" 2010, Transport Scotland.

(vi) The Company shall consult and comply with Network Rail with respect to providing pedestrian access between the ITS maintenance hardstanding

---

**Part 2 Specific Requirements**

---

on the Stonehaven Junction southbound diverge slip road and adjacent land in the ownership of Network Rail.

## **1.2 Site Clearance**

### 1.2.1 Site Clearance

(i) The Company shall consult and comply with the requirements of:

(a) Transport Scotland, Trunk Road and Bus Operations;

in connection with All Purpose Roads site clearance and with:

(b) Aberdeen City Council; and

(c) Aberdeenshire Council.

as appropriate, in connection with Side Road site clearance.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

(ii) The Company shall ensure that any trees and vegetation which shall be required to be felled to accommodate the Design shall be felled and disposed of with the exception of those required to fulfil the environmental, landscape and ecology requirements.

(iii) The Design shall include the removal of those buildings and Structures as described in Appendix 2/1 to Part 4 of these New Works Requirements.

### 1.2.2 General Site Clearance

(i) All existing roads, tracks, hard standing areas, kerbs, gullies, road lighting columns, electrical installation infrastructure, barriers, signage, existing Traffic Scotland Equipment and otherwise, made redundant as a result of the New Works, shall be removed to their full depth of construction, and the former location graded to appropriate levels and reinstated with subsoil and topsoil, to allow for planting or seeding to be undertaken in accordance with the landscape design.

(ii) Kerbs, gullies, lamp posts, barriers, signage and otherwise, made redundant as a result of the New Works within the limit of the Land Made Available for the New Works by the Scottish Ministers, and which are not located within landscaped areas shall be removed to their full depth of construction, and the former location reinstated in accordance with the Specification.

## **1.3 Fencing and Environmental Barriers**

### 1.3.1 General

(i) Notwithstanding any other provision of this Agreement all defective and damaged parts of any existing or temporary boundary treatments shall be immediately repaired to ensure that the New Works Site shall be stock proof and until such time as any walling, permanent fencing, Accommodation Works and accesses shall be completed.

Part 2 Specific Requirements

---

- (ii) Watergates on fencing shall be provided at all watercourse locations where stock proof fencing shall be provided, and shall include provision for passage by protected mammals including otter.
- (iii) The Design for all gates at accesses shall allow for the gates to open away from the carriageway only.
- (iv) Prior to works commencing in any area, the area shall be secured by either a temporary or permanent boundary treatment to delineate the boundary of the New Works Site in that area.
- (v) Notwithstanding the other provisions of this Agreement, the Company shall undertake a risk assessment on all fencing provision to confirm that this is appropriate to the location and adjacent land use and the fencing constructed should be as a minimum dependant on the characteristics of each specific area of construction. Where any conflict is identified with these New Works Requirements this shall be reported to the Contracting Authority.

## 1.3.2 Temporary Fencing, Gates and Otherwise

- (i) The Company shall consult and comply with each relevant landowner and tenant/occupier prior to work commencing on the New Works Site regarding the lengths of the New Works Site boundary which shall be required to have temporary stockproof fencing erected if the Company chooses this option.
- (ii) The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (iii) The position of all gates and animal accesses shall also be agreed with each landowner and tenant/occupier at any particular location prior to work commencing at such location.
- (iv) The temporary fencing shall be either type 1 or 3 as shown on Drawings H1 and H2 in Volume 3 of the MCHW or as otherwise agreed by the landowner and tenant/occupier.
- (v) Where temporary or permanent gates are to be locked, the Company shall provide and install the locks. Two sets of keys for each lock shall be provided to the Contracting Authority

## 1.3.3 Permanent Fencing, Walling, Gates and Otherwise

- (i) The Design shall include fencing, to be provided and constructed on both sides of all Special Roads and all All Purpose Roads as described in Table 1 of Schedule 19 of the Agreement.
- (ii) The Special Road fence shall terminate at the end of each Special Road slip road adjacent to the GIVE WAY line, or equivalent, and shall be timber post and 5 rail as described in Drawing H3 in Volume 3 of the MCHW as a minimum. The All Purpose Road fence shall be timber post and 4 wire fence. Where an existing boundary fence is replaced as part of the New Works, the fence provided as part of the New Works shall be of equal provision to the existing fence as a minimum. The boundary fence, shall tie into existing fencing, temporary fencing or fencing as required by Appendix 1/15 to Part 4 of these New Works Requirements as appropriate.
- (iii) The Company shall consult and comply with the requirements of:

Part 2 Specific Requirements

---

- (a) Transport Scotland;
- (b) Aberdeen City Council; or
- (c) Aberdeenshire Council;

as appropriate in connection with all permanent fencing, walls, gates, fencing in environmentally sensitive areas, and otherwise to be constructed out-with those described in Appendix 1/15 to Part 4 of these New Works Requirements.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (iv) Notwithstanding the other requirements of this Agreement, as a minimum drystone walls for landscape and visual mitigation shall be provided as described in Appendix D.
- (v) The particular requirements in respect of the construction of drystone walls are as follows:
  - (a) Walls shall be constructed by suitably qualified and experienced drystone wallers;
  - (b) Wall Design and construction methods shall match local vernacular walling style and height for each specified location to ensure that new walls reflect the character and appearance of walls within the local area;
  - (c) The Company shall identify the different styles of existing drystone walling that reflect the changes in character along the route and construct sample sections of drystone wall for each location for approval by the Contracting Authority prior to construction; and
  - (d) Stone shall be sourced from the local area and re-used where available from walls required to be demolished as part of the New Works.
- (vi) Outwith those fences, walls, gates and otherwise described in paragraphs 1.3.3(i) and 1.3.3(ii) and those required by Appendix 1/15 to Part 4 of these New Works Requirements, permanent fencing, gates and otherwise shall be provided in the Design at the following locations and tied into adjacent fencing where appropriate:
  - (a) where storage, attenuation or settlement ponds or otherwise shall be formed as part of the drainage measures, a risk assessment shall be carried out by the Company to determine an appropriate form of fence to be designed, constructed and completed and access provided via a lockable gate which shall be as a minimum 3.6 metre wide as shown on Drawing H17 in Volume 3 of the MCHW.

Consideration shall be given to the movement of wildlife to and from the storage, attenuation or settlement pond or otherwise when considering the form of fencing;
  - (b) at any gaps in the boundary fencing, along the full length of the New Works, not described elsewhere in these New Works Requirements, this fencing shall be timber post and 4 wire as a minimum unless required otherwise by the Relevant Authorities to match adjacent sections of fencing;

## Part 2 Specific Requirements

- (c) at the back of the east verge of the New B977 Echt to Balmedie Road (5), extending south for 125 metres from the southern end of the east parapet of the B977 Echt to Balmedie East Overbridge (PS57). This fencing shall consist of a green coloured medium knitted shade mesh providing a minimum of 45% screening/wind reduction or approved equivalent, 2 metres in height above ground level. The mesh shall be mounted on a 2 metre high post and seven wire fence.
- (vii) Unless otherwise stated no elements of the fencing, whether above or below ground level, shall extend beyond the permanent Land Made Available by the Scottish Ministers boundary.
- (viii) The location of fencing in the Design shall ensure a smooth and flowing vertical and horizontal alignment.
- (ix) Where permanent fencing, other than Accommodation Works fencing, shall be indicated in the Design along the boundary of the Land Made Available by the Scottish Ministers for the New Works, the fence shall be set parallel to the boundary with the fence posts contiguous to the boundary and with the fence within the Land Made Available by the Scottish Ministers for the New Works.
- (x) Where fencing as required by Appendix 1/15 of Part 4 of this Schedule 2 is provided at the boundary of the Land Made Available by the Scottish Ministers for the New Works the requirements of paragraph 1.3.4 (vii) shall be adjusted as necessary to allow maintenance of each fence and of the land within the Sites.
- (xi) Notwithstanding any other provisions of this Agreement, the Company shall ensure that the line of the permanent fence shall be set out in such location as shall have been agreed by the Contracting Authority prior to any fencing works having commenced.
- (xii) The location and erection of any fencing works in environmentally sensitive areas shall be agreed with the Contracting Authority before such works have commenced.

## 1.3.4 Fencing for Wildlife

- (i) Fencing for wildlife shall include but not be limited to:
- (a) Badgers;
  - (b) Otters;
  - (c) Deer; and
  - (d) Rabbits
- (ii) Protected mammals - Otter and Badger

The Design shall ensure that fencing shall be provided adjacent to wildlife tunnels, underpasses, wildlife bridges and ledges to guide protected mammals to the tunnel, wildlife bridge underpass and ledge entrance.

The Company shall consult and comply with Scottish Natural Heritage in respect of requirements for fencing around SUDS storage, attenuation or settlement ponds to make them otter proof to mitigate against the risk of bioaccumulation of toxins from ponds by otters.

Part 2 Specific Requirements

---

The Company shall also consult and comply with the requirements of Scottish Natural Heritage with regard to the design, location and extent of fencing for protected species.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of these requirements.

Noise fences and barriers shall have an underground anti-burrow deterrent attached to the base of the barrier where required in accordance with Specification Appendix 30/12.

(iii) Rabbit Fencing

In addition to the areas described elsewhere in these New Works Requirements, where the Company considers that planting areas may be at risk of being damaged by rabbits, such areas shall be enclosed by permanent fencing in accordance with Specification-clause 370AR 1.2.

(iv) Deer Fencing

In addition to the areas described elsewhere in these New Works Requirements, where the Company considers that deer proof fencing is required to reduce the risk of motor vehicle collisions or to prevent damage to planting areas, such fencing shall be installed in accordance with Specification clause 370AR 1.3.

1.3.5 Noise Fences and Barriers

- (i) The Design shall ensure that noise fences and barriers shall be constructed as soon as practicably possible after commencement of the New Works to assist in mitigating construction impacts and to afford the maximum benefit to any affected receptor.
- (ii) The design of environmental barriers shall be undertaken by the Company in accordance with the Barrier Assessment Framework set out in HA 65 of the DMRB, and shall include provision for their function as mammal proof barriers as required by Specification Appendix 30/12.
- (iii) Notwithstanding the requirements elsewhere in these New Works Requirements, the Company shall employ a landscape architect or architect to advise on the design of the form of the environmental barriers. The aesthetic requirements for environmental barriers are included in Appendix E.
- (iv) The environmental barrier design shall take into account, as a minimum, durability, weathering, the extent to which materials are resistant to vandalism and graffiti, and the long term maintenance of the environmental barriers.
- (v) The design shall ensure that the environmental barriers are integrated physically and visually with other infrastructure for the scheme including, signs, lighting columns, bridge parapets, retaining walls, Traffic Scotland Equipment (TSE), restraint systems, CCTV cameras and equipment.
- (vi) The design of environmental barriers shall:
  - (a) as far as practicable, minimise adverse visual impacts for surrounding properties and outdoor receptors (footpaths, bridle paths, cycle routes, local roads and areas used for outdoor recreation);

Part 2 Specific Requirements

---

- (b) reflect / enhance the local landscape character on either side of the carriageway;
  - (c) provide the road user with varied and interesting views where possible, in particular avoiding long, monotonous stretches of barrier;
  - (d) assist in screening views of the road and traffic from nearby visual receptors; and
  - (e) enhance the local environment through the use of a sympathetic form, colour and texture.
- (vii) Where localised dips in ground level occur, a continuous barrier top height shall be maintained and the void beneath in-filled with earthworks.
- (viii) The Design shall ensure the provision of gates, located at appropriate points within barriers, at intervals not exceeding 200 metres. The gates shall be provided to allow access for routine maintenance of the New Works and associated features and landscaping and also to allow escape routes for members of the public in the event of an incident on the adjacent carriageway. Approximately 2.0 square metres of approved hard standing shall be provided at the front and rear of each gate in order to prevent growth of vegetation and to aid identification of access points/escape routes. Escape routes shall be appropriately signed with emergency exit type signing at points on the carriageway side of the barrier between the gates and on the carriageway side of the gate itself.
- (ix) Except where otherwise specified in these New Works Requirements concrete or opaque plastic noise barriers shall not be acceptable.
- (x) Except where otherwise specified in these New Works Requirements, close-boarded timber noise barrier fencing shall only be acceptable if it meets the following criteria:
- (a) Metal fence posts shall not be acceptable unless they are hidden on both sides to give the appearance of an uninterrupted timber face across posts and panels, unless otherwise agreed with the Contracting Authority;
  - (b) Transitions between barriers of different heights and the ends of barriers and the ground shall slope at a gradient not steeper than one in two; and
  - (c) Vertical timber boards shall extend the full height of the barrier. Horizontal joints between vertical boards or panels with vertical boarding shall not be acceptable.
- (xi) The Design shall ensure that environmental barriers are sited as close to the edge of carriageway as possible so as to maximise their performance, taking account of all other requirements including, but not limited to:
- (a) Required minimum verge widths, sight lines and other relevant standards and requirements;
  - (b) the need to reduce the visual 'canyon' effect where long stretches of environmental barrier are close to the road edge; and
  - (c) other requirements (such as lighting and signing, utilities, geotechnical constraints, and the like).

## 1.4 Road Restraint Systems (Vehicular and Pedestrian)

1.4.1 The Company shall consult and comply with the requirements of:

- (i) Aberdeen City Council; and
- (ii) Aberdeenshire Council;

as appropriate, with regard to all road restraint systems on Side Roads, and connections/transitions to any existing road restraint systems on Side Roads.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

1.4.2 The Company shall provide, within the extent of the New Works Site a compliant Vehicle Restraint System (VRS) in accordance with TD 19. Where sections of existing barrier can be demonstrated to comply with this standard then the Company shall also demonstrate that the residual life of the VRS meets the criteria described in Schedule 4.

1.4.3 In addition to undertaking the Design and a vehicle restraint risk assessment in accordance with the criteria for the provision of safety barriers, parapets, guardrails and the like as set out in TD 19 of the DMRB, the Company shall carry out a further risk assessment to determine any areas, within the Design, where additional safety barriers, vehicle and pedestrian parapets, pedestrian guardrails, and the like are required.

1.4.4 Unless protected by a VRS, sign posts, lighting columns and the like shall be designated passively safe so as to require no protection in accordance with TD19. Where passively safe sign posts, lighting columns and the like are used they shall conform to testing as detailed in BS EN 12767:2007. Where additional hazards exist in tandem with any sign posts, lighting columns and the like a VRS shall be required in accordance with the Design. In such circumstances any sign posts, lighting columns and the like placed behind the VRS, out-with the VRS working width, may be designated as not passively safe.

1.4.5 Where reinforced soil Structures or other Structures utilising precast soil retaining panels shall be provided in the Design adjacent to the carriageway, the fixing of VRS directly to these precast panels shall not be permitted in the Design.

1.4.6 VRS in the Design shall be designed, constructed and completed to ensure that a smooth and flowing vertical and horizontal alignment shall be achieved on the arrival to, and the departure from, any Structure.

1.4.7 TD19 of the DMRB states that working width shall be described by the Design Organisation. For the purposes of this Agreement, Design Organisation in this context shall be the Designer.

1.4.8 Notwithstanding the requirements of TD19 of the DMRB, any VRS incorporated in the Design shall have an impact severity level of either A or B as described in Table 3 of BS EN 1317-2 together with the relevant test report results to demonstrate that the appropriate index values have been achieved.

1.4.9 VRS located in the central reserve of the All Purpose Dual Carriageway shall have a containment level of H1 or greater.

Part 2 Specific Requirements

---

- 1.4.10 At any new central reserve maintenance crossover the central reserve VRS shall be removable. The removal of the VRSs shall not be detrimental to the effectiveness of the adjacent sections of the VRS.
- 1.4.11 Unless noted otherwise, gaps of less than 100 metres in the verge VRSs shall be in-filled with a similar type of VRS to the adjacent lengths.
- 1.4.12 Where hard standings result in a gap in a VRS, a VRS shall be provided at the back of the hard standing and overlapped so as to remove the risk of vehicles passing through the gap.
- 1.4.13 Galvanised pedestrian guardrails shall be provided at appropriate locations and, in particular, at locations where a footpath, access path or hard standing is adjacent to an embankment drop.
- 1.4.14 A galvanised pedestrian guardrail shall be provided between the south footpath/cycle path on Milltimber Brae Overbridge within the extents of the PS16 Milltimber Brae Overbridge structure. The pedestrian guardrail shall be high visibility with a see through top panel.
- 1.4.15 Staggered pedestrian guardrail (chicane layout) shall be provided at the southern extent of the Balmedie – Belhelvie cyclepath.
- 1.4.16 Bollards shall be provided at the southern end of the New Access Road /Track to New means of access E264, at the point of commencement of the New Footway/Cycleway from Balmedie to Easter Hatton Link.

## 1.5 Drainage and Service Ducts

- 1.5.1 The Company shall consult and comply with the requirements of the Scottish Environment Protection Agency (SEPA) to obtain the necessary licences, approvals and otherwise to enable the Design, construction and completion of the New Works and with respect to complying with the requirements of the Water Environment (Controlled Activities) Regulations 2011 (CAR).

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

The Company shall also provide a copy of the relevant licences, registrations and otherwise as required under CAR to the Contracting Authority prior to commencement of the relevant New Works.

### 1.5.2 Drainage

- (i) The Design shall ensure that the continued and uninterrupted flow of all watercourses is maintained throughout the construction of the New Works.
- (ii) Notwithstanding any other provisions of this Agreement, the Company shall, prior to the commencement of the New Works, give 10 days written notification to SEPA of the intended date for the commencement of the New Works.
- (iii) The Company shall consult and comply with the requirements of SEPA with respect to the Design including, but not limited to, drainage outfalls, culverts, all works on inland waters and pollution control.

## Part 2 Specific Requirements

- 
- (iv) The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (v) The Company shall not discharge water from the New Works Site on either a temporary or permanent basis until it has consulted and complied with the requirements of all interested parties including, but not limited to:
- (a) SEPA;
  - (b) Scottish Natural Heritage (SNH);
  - (c) Scottish Water;
  - (d) Transport Scotland
  - (e) The Scottish Ministers Trunk Road North East Management Unit;
  - (f) Aberdeen City Council; and
  - (g) Aberdeenshire Council;
- as appropriate within their respective boundaries.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (vi) The Company shall consult and comply with the requirements of:
- (a) Aberdeen City Council;
  - (b) Aberdeenshire Council;
  - (c) Transport Scotland;
  - (d) The Scottish Ministers Trunk Road North East Management Unit; and
  - (e) Scottish Water.

as appropriate, with respect to the Design of the New Works drainage.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (vii) The New Works drainage system for Phase 1 of AWPR/B-T shall incorporate the drainage from the A96 Park & Choose link road and shall also incorporate an outfall pipe for the A96 Park and Choose SuDS basin outfall chamber which shall cross the A96 to Green Burn. The A96 Park & Choose works are being procured separately from the AWPR/B-T by Aberdeen City Council. The Company shall consult and comply with Aberdeen City Council in respect of this requirement. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in this respect.

### 1.5.3 General Requirements.

- (i) The Design for all roads, except Side Roads, shall take account of the Construction Industry Research and Information Association (CIRIA) Report C697 "The SuDS Manual". The SuDS Design for the Side Roads shall be in accordance with the requirements of the relevant roads authorities. The Design shall ensure that on all un-kerbed roads, with the exception of Accommodation Works Access Tracks, surface water drainage and ground water drainage shall be in accordance with Drawing B1 and B15, Type X, to Volume 3 of the MCHW except the sub-base

## Part 2 Specific Requirements

material above the drain and contiguous with the carriageway specified in detail Type X on drawing B15 shall be substituted by 75 millimetres nominal size 'Type B' crushed rock (gravel shall not be permitted) for a depth of 300 millimetres.

- (ii) The Design shall ensure that drainage on footways, footpaths, cycle tracks, combined footways/cycle tracks, Accommodation Works Access Tracks, New Access Roads/Tracks, New Means of Access and otherwise shall remove surface water and sub-surface water to at least 450 millimetres below finished track/path levels.
- (iii) The minimum pipe diameter for all drainage systems in the Design shall be 150 millimetres except for cross carriageway drainage where the minimum diameter shall be 300 millimetres and pre-earthworks drainage where the minimum diameter shall be 225 millimetres.
- (iv) The Design shall ensure accessibility for inspection and maintenance. All drainage systems shall have adequate facilities for rodding and jetting.

Rodding eyes shall not be permitted.

The maximum distance between access points on lengths of pipe shall be 90 metres. The maximum distance between access points on lengths of combined kerb and drainage units shall be 45m.

Access chambers shall have a diameter not less than 1050 millimetres. Chamber diameters and depths and the use of step irons, rungs and ladders shall conform to the requirements given in Table NA22 of BS EN 752:2008 if not detailed within the HCD.

The plan area of all manholes and catchpits which shall be required in the Design shall not be permitted within the road pavement of any roads.

- (v) Pipe flow velocities shall not be less than 0.75 metres per second at any point and not greater than 2.5 metres per second at pipe discharge points.
- (vi) All pipes under carriageways less than 1.2 metres below the finished road level (measured from the finished road level to the soffit of the pipe) shall be encased in concrete of minimum thickness 150 millimetres.
- (vii) Drainage in the Design shall be provided to intercept water, field drains and slope drains and otherwise at the top of cuttings where the adjacent land falls towards the cutting, on cutting berms, at the bottom of embankments and in the verges.

Where the road is in cutting, less than two metres below original ground level, drainage at the top of the cutting may be omitted as long as there is a verge drain at the toe of the cutting.

Subsurface drainage shall be provided within the central reserve and verges of all new All Purpose Roads and Side Roads as appropriate in respect of road camber.

Notwithstanding the above, the soffit of the subsurface drain shall be located at a minimum depth of 300 millimetres below formation, or where a capping layer is to be adopted in the Design, at a minimum depth of 300 millimetres below sub-formation.

Lining of cut-off ditches shall be in accordance with paragraph 1.6.1 (xii).

## Part 2 Specific Requirements

- (viii) Where land drains are encountered in the construction of the New Works such drains shall be intercepted and connected to an outfall via a drainage system.
- The Company shall record and photograph the position of each land drain when intercepted, provide this information to the Contracting Authority and include in the As Built Information
- The Company shall consult and comply with the requirements of all landowners and tenants/occupiers in respect of land drain connections. The landowner and tenant/occupier shall be permitted to inspect severed land drains and their connections prior to backfilling.
- Notwithstanding this requirement the Company shall provide a connection to the drainage system which is coincident with low points in the adjacent fields. Where these connections are provided they shall be marked at ground level by a 300mm x 300mm precast concrete marker slab.
- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (ix) Side slopes shall be drained where egress of groundwater is encountered, or is likely to be encountered.
- (x) The Design shall ensure that drainage is provided in areas where there is potential for erosion or ponding which would be detrimental to the safe operation of the carriageway and/or long term stability of the New Works.
- (xi) The Design shall allow for the proper treatment of all surface water and road runoff within the limits of the New Works Site.
- (xii) The Company shall take due regard and make allowance in the Design, construction and completion of the works for the areas throughout the New Works Site and adjacent areas which are susceptible to flooding to avoid inconvenience to adjacent landowners and tenants/occupiers. No increase in flood risk in the vicinity of the New Works Site shall be permitted.
- (xiii) The Company shall monitor ground conditions to ensure effective functioning of all field drainage.
- (xiv) The use of surface water concrete open channels, fin drains and narrow filter drains shall not be permitted in the Design.
- (xv) The use of linear drainage channels shall not be permitted in the Design.
- (xvi) The Design shall ensure that where filter drains in the road verge and central reserve are designed to intercept surface run-off, the top surface of the filter material shall be between 25 millimetres and 50 millimetres below the adjacent finished verge or carriageway level.
- The exposed stone shall be 75 millimetres nominal size 'Type B' crushed rock (gravel shall not be permitted) for a depth of 300 millimetres. This filter material shall extend to the carriageway edge.
- (xvii) Where filter drains shall be remote from the carriageway edge the top surface of the filter material shall extend to finished ground level.
- (xviii) The Design shall ensure that new manhole or catchpit covers which shall be required in the Design, shall not be permitted within the road pavement of all roads described in Table 1 of Schedule 19 of the Agreement.

Part 2 Specific Requirements

---

- (xix) The Design shall ensure that all gully, catchpit and manhole grates, covers and frames shall comply with BS EN 124 with the following provisos:
  - (a) Class A15 shall not be permitted;
  - (b) Class D400 shall be used as a minimum standard for ironwork located within the carriageway or areas accessible to vehicular loading; and
  - (c) Gullies shall be of the trapped type, in-situ cast to Drawing F13 of Volume 3 of the MCHW, and shall have a double triangular, non-rock grating and frame with clear opening 434 x 434 millimetres bedded in mortar.
- (xx) The Design shall ensure that all kerbed roads have a positive drainage system such as gullies.
- (xxi) Where gullies are used in the Design, double gullies or additional combinations of gullies shall be provided at sag points.
- (xxii) Subject to the other provisions of this Agreement all surface water drainage in the Design shall be designed in accordance with the Modified Rational Method.
- (xxiii) Notwithstanding the general requirements noted above, Grassed Surface Water Channels (GSWC) for Highway Runoff shall be permitted subject to the following provisions:
  - (a) GSWC shall only be permitted for use on longitudinal gradients between 1 in 200 and 1 in 50;
  - (b) GSWC shall not be permitted for use on embankments greater than six metres in height;
  - (c) Where sub-surface drainage is required as part of a GSWC design it shall be provided as a filter drain;
  - (d) The interaction of GSWC with other design elements such as road restraint systems and active and passive TSE shall be considered in determining the extent of any length of GSWC; and
  - (e) The Company shall consult and comply with the Contracting Authority in respect of proposals for the design of GSWC.

#### 1.5.4 Existing Drainage

- (i) All existing drainage pipework within one metre of carriageway formation level which shall become redundant as part of the New Works, shall either be excavated and removed from the New Works Site or grouted up.
- (ii) All existing drainage pipework over one metre below formation level and greater than 375 millimetres in diameter, which shall become redundant as part of the New Works shall be completely in-filled with pulverised fuel ash cement grout or equivalent.
- (iii) The Company shall maintain all existing foul and surface water drainage or suitable temporary drainage until the permanent drainage for the New Works is installed and functioning in accordance with other provisions of these New Works Requirements.

Part 2 Specific Requirements

---

- (iv) Ground profiles shall at all times be maintained to shed surface water efficiently and directly into the nearest drain and to prevent penetration of water into or below existing pavements.
- (v) Where any existing drainage shall be incorporated within the New Works as part of the Design, the Company shall consult and comply with the requirements of all interested parties including, but not limited to:
  - (a) SEPA;
  - (b) Aberdeen City Council;
  - (c) Aberdeenshire Council; and
  - (d) Transport Scotland;

as appropriate to demonstrate that the existing drainage shall fulfil the Design requirements.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

#### 1.5.5 Drainage Outfalls

- (i) The Design shall ensure that discharge of the drainage system does not adversely affect downstream pipes, culverts, watercourses, fish farms, static water bodies, reed beds and otherwise.

Where the Design incorporates a connection to an existing drainage system, it shall be controlled or attenuated to ensure that there shall be no adverse effect on downstream pipes, culverts, watercourses, fish farms, static water bodies, reed beds and otherwise.

The Design shall allow for the upgrading of existing drainage systems which may be required as a result of such connections.

- (ii) Outfalls to watercourses in the Design shall incorporate measures between the end of the pipe and the watercourse to dissipate and reduce the velocity of the discharge.

The Design of such measures shall prevent erosion and scour and shall sustain grass or aquatic vegetation.

- (iii) The Design shall ensure that provision shall be made to facilitate safe access to each drainage outfall for inspection and maintenance purposes.

#### 1.5.6 Drainage Culverts

- (i) A culvert shall mean a cross carriageway drain servicing an open drainage system and such culvert Design shall have a minimum diameter or height of 1200 millimetres.
- (ii) All culverts shall be designed in accordance with CIRIA Report C689 "Culvert Design and Operation Guide" (2010) except that all culverts Design shall be for the 1 in 200 years flood peak discharge flow of the watercourse.

The Design of the culvert shall accommodate the Design flow in a free flowing condition allowing for a minimum freeboard of 300mm in accordance with CI 2.7.21.8. The culvert Design shall also consider the impact of culvert geometry on flood risk in accordance with CI 1.5.11.

Part 2 Specific Requirements

---

Notwithstanding the other provisions of this Agreement, the Design for all culverts shall also be in accordance with the Design Guidance Booklet: "Rivers crossings and Migratory Fish" – A Consultation Paper, produced by the Scottish Executive (April 2000).

All culvert Design shall encourage use by wildlife such that all fish species and mammals associated with the watercourse may pass freely through the culvert.

Culverts shall be designed to operate under sub-critical, free flow conditions.

Bends, steps, changes in culvert slope and cross section shall not be permitted in the Design except in the re-alignment of the existing Megray Burn Culvert which passes under the proposed PS01 Bridge Structure in which case bends shall be permitted.

- (iii) The Design shall ensure that, where an existing culvert shall be replaced or extended, the new culvert shall be no less in dimensions and capacity than the existing culvert.

- (iv) All new culverts shall have a formed concrete headwall at both the inlet and outlet.

All culvert headwalls shall be located a minimum of 2.0 metres beyond the back of the adjacent road verge.

Headwalls in the Design shall be designed as Structures.

- (v) The Design shall ensure that measures shall be taken at watercourses to prevent livestock entering all culverts.

- (vi) The Company shall undertake a risk assessment to determine the provision or otherwise of trash screens and security screens at culverts.

- (vii) Culverts, where mammal ledges are required to be provided as part of the Design, shall be designed as Structures in accordance with Section 2.

The ledges shall be positioned not lower than 150 millimetres above the 1 in 25 year flood level and shall provide a minimum 600 millimetres headroom and 500mm width.

- (viii) The Company shall consult and comply with the requirements of:

- (a) Aberdeen City Council;
- (b) Aberdeenshire Council;
- (c) SEPA; and
- (d) Transport Scotland

As appropriate with regards to providing trash screens and security screens at culverts.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (ix) Multi-pipe culvert systems shall not be permitted in the Design.

- (x) The Design shall ensure that the invert and sides of all watercourses at the inlets and outlets of culverts over a minimum length of 5 metres shall be protected from scour and erosion.

## Part 2 Specific Requirements

Cascades and erosion protection on all watercourses shall be constructed in natural stone matching the colour, finish and features of watercourses within and adjacent to the New works Site, or as otherwise agreed with SEPA.

- (xi) The Design shall ensure that provision shall be made for safe access to each culvert inlet and outlet for inspection and maintenance purposes.

#### 1.5.7 Pollution Control and Flood Prevention

- (i) The Company shall take all reasonable precautions and comply with all Laws, including SEPA requirements, in conjunction with the water environment, including:

- (a) any interference with the supply to or abstraction from water sources;
- (b) silting;
- (c) erosion of watercourse beds or banks; and
- (d) pollution of water so as to affect adversely the quality or appearance thereof or cause injury or death to animal, aquatic or plant life in each case by an act or omission by the Company.

- (ii) The Company shall consult and comply with the requirements of:

- (a) SEPA;
- (b) Aberdeen City Council;
- (c) Aberdeenshire Council; or
- (d) Transport Scotland

as appropriate with respect to the Design including, but not limited to flood prevention.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (iii) Notwithstanding any other provisions of this Agreement, all new outfalls incorporating surface water runoff from road pavements shall be provided with a shut down system to facilitate dealing with accidental spillages. A shut down facility shall be provided both before the inlet and after the outlet of the associated new settlement, attenuation or storage ponds.
- (iv) The shut down system shall be by means of a penstock chamber and penstock system operated from the chamber surface level. The penstock actuator shall be of the floor pillar with bevel gearbox type. The penstock shall be secured by a heavy duty padlock. Two sets of spare keys shall be handed to the Contracting Authority for each penstock padlock.
- (v) The Design shall ensure that the runoff from any road, as described in Table 1 of Schedule 19 to the Agreement, does not increase the risk of flooding downstream of the point of discharge.

The Design shall include a detailed flood risk assessment and shall include any recommendations of such assessment.

- (vi) The Design shall ensure that the drainage system shall include sufficient attenuation of road drainage to reduce flows from the new road drainage system during a 1 in 100 year rainfall event (+20 per cent for climate

Part 2 Specific Requirements

---

- change) to the equivalent greenfield run-off from a one in two year rainfall event in accordance with HD33/06 prior to discharge to the receiving watercourse.
- (vii) All storage ponds, retention basins,, detention basins, swales, overflow trenches and otherwise shall be sized as in accordance with CIRIA Report C697 "The SUDS Manual" in order to allow settlement for pollution removal purposes.
  - (viii) The Design shall ensure that all settlement, attenuation and storage ponds and otherwise shall take into account ground water levels and shall be designed to have permanent water below the outlet level.
  - (ix) The Design shall ensure that all settlement, attenuation and storage ponds and otherwise shall include provision to prevent accidental release of hydrocarbons into the receiving watercourse including a baffle or similar in accordance with DMRB 33/06.
  - (x) The Design shall ensure that all settlement, attenuation and storage ponds and otherwise shall also comply with the requirements of section 6.7.14.
  - (xi) The Company shall consult and comply with Aberdeen International Airport in respect of the Design of settlement, attenuation and storage ponds and otherwise regarding the need for measures to avoid increased risk of airplane bird strike. The Company shall incorporate measures as appropriate within their Design. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
  - (xii) The Design shall ensure that access to all settlement, attenuation and storage ponds and otherwise shall be provided for maintenance purposes either on New Access Roads/Tracks constructed specifically for this purpose or through use of New Means of Access or otherwise and shall incorporate suitable turning areas for maintenance vehicles.
  - (xiii) The Design shall ensure that access to all settlement, attenuation and storage ponds and otherwise shall extend to aquatic benches and the inlet and outlet infrastructure, and to the base of the pond via a ramp for maintenance access.
  - (xiv) The Design shall ensure that where New Access Roads/Tracks are being constructed specifically to give access to settlement, attenuation and storage ponds and otherwise, these shall be formed in un-surfaced access construction in accordance with paragraph 1.7.5 (iii).
  - (xv) The Design shall ensure that where it is proposed to make use of either footways/cycle tracks or, New Means of Access and otherwise as described in Table 1 of Schedule 19 of the Agreement for the purpose of access to settlement, attenuation and storage ponds and otherwise, the relevant sections of either footways/cycletracks or Accommodation Works Access Tracks, New Means of Access and otherwise shall be widened to a minimum of 4 metres and constructed to the minimum same standard as the footway/cycletracks or New Means of Access and otherwise.
  - (xvi) The Design shall include measures including but not limited to gates with locks, removable bollards, fences and otherwise to deter use of any maintenance access routes by unauthorised vehicles and non-motorised users.

Part 2 Specific Requirements

---

- (xvii) On the Balmedie- Tippetry section a amenity pond shall be provided and connected to the existing pond at Dambrae, with an existing pond within the Land Made Available retained and lined, all works as detailed on drawing P246600/SK/DP0501.

## 1.5.8 Watercourse Diversions

- (i) The Company shall consult and comply with the requirements of:

- (a) SNH;
- (b) SEPA;
- (c) Aberdeen City Council; and
- (d) Aberdeenshire Council;

as appropriate and comply with the Water Environment (Controlled Activity)(Scotland) Regulations 2005 with respect to the Design for watercourse diversions.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (ii) The Design shall include for the diversion of watercourses as described in the Watercourse Notices included in Schedule 9.
- (iii) Other than those watercourses described in the Watercourse Notices included in Schedule 9, existing watercourses, whether flowing or dry shall continue on their existing alignment.

The Design shall ensure that all watercourses shall be taken under the Project Roads in culverts, or in Structures.

## 1.5.9 Service Ducts

- (i) The Company shall consult and comply with the requirements of Statutory Undertakers and owners of Private Apparatus and other relevant parties with regard to the provision of service ducts for the use of, or the future use of, any Statutory Undertakers and owners of Private Apparatus and other relevant parties, including but not limited to, the following:

- (a) Scottish Water;
- (b) Scottish and Southern Energy Transmission;
- (c) Scottish and Southern Energy Distribution;
- (d) Scotland Gas Networks;
- (e) British Telecommunications;
- (f) Cable and Wireless; and
- (g) Traffic Master.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (ii) The Design shall ensure that service ducts have a metal foil strip laid above them to aid their future location and shall be provided with 45 degree bends and extensions at each end to provide entry at a depth of 0.5 metres below finished ground level terminating a minimum of 0.5 metres out-with the edge of the carriageway.

Part 2 Specific Requirements

---

Empty ducts shall include draw wires or cords and plugs.

- (iii) Service ducts for future provision shall terminate in a draw chamber.
- (iv) A set of spare twin transverse 100 millimetre internal diameter smooth bore rigid style ducts shall be provided across all slip roads at the back of nosings.
- (v) The Design shall include spare transverse ducts beneath each road connecting to each junction within 10 meters of the approach to the junction, as follows:
  - (a) 2 x 100 millimetres diameter telecom ducts; and
  - (b) 2 x 150 millimetres diameter power supply ducts.

#### 1.5.10 Pumping Stations

- (i) Pumping station design shall take account of BD78/99 – Chapter 7 (DMRB, Volume 2, Section 2, Part 9) and CIRIA Report 121, 'Design of low-lift pumping stations'.
- (ii) Pumping stations shall prevent flooding from the surface water drainage network and shall cater for all events up to and including the 1 in 30yr plus climate change.
- (iii) The design flow rate shall be between 80% and 105% of the pumpset 'best efficiency point' (BEP). The minimum standby capacity shall be equivalent to one third of the design flow rate.
- (iv) Maintenance access shall include a 'permanently-in-place' pump removal facility. All lifting equipment shall comply with the Lifting Operations and Lifting Equipment Regulations and Provision and Use of Work Equipment Regulations.
- (v) An auxiliary or stand-by power supply (capable of full operation of the pumping station) shall be provided together with an advance warning system capable of alerting the Company to the particular fault.

#### 1.5.11 Flood Protection

- (i) The Company shall consult and comply with the requirements of SEPA in respect of the Design of any flood protection and compensatory storage measures. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (ii) The Design shall include a detailed flood risk assessment and shall comply with any recommendations of such assessment.
- (iii) Flood protection and compensatory storage shall be provided where the Works encroach on the functional floodplain of main rivers where the functional floodplain is as defined in Scottish Planning Policy (SPP).
- (iv) Flood defences shall include appropriate freeboard including allowance for climate change, modelling inaccuracies, settlement, and erosion.
- (v) Maintenance access shall be provided to flood defences and compensatory storage areas.

## 1.6 Earthworks

### 1.6.1 General

Part 2 Specific Requirements

---

- (i) The geotechnical design for earthworks shall comply with:
  - (a) the principles and application rules of BS EN 1997-1 and the accompanying UK National Annex, as modified and supplemented by these New Works Requirements;
  - (b) the requirements of the DMRB, where they do not conflict with the above; and
  - (c) relevant non-contradictory complementary information.
- (ii) The Company shall carry out a risk assessment as part of the earthworks design in order to minimise any risk to the general public, pedestrians, cyclists and any other road users resulting from the Design, construction and completion of the New Works.
- (iii) The Company shall take all necessary measures to prevent rock or other debris from falling onto the carriageway.
- (iv) The Company shall take all necessary measures to obviate any adverse effects on the surrounding area and to prevent flooding and/or pollution.
- (v) The Company shall develop an earthworks strategy to demonstrate the effective management of the earthworks balance.
- (vi) Any ground improvement methods and systems that shall be provided by the Company in the Design, execution and completion of the New Works shall be provided in accordance with the manufacturer's written guidance where appropriate. The Company shall undertake in situ trials and testing of the ground improvement techniques to demonstrate that the desired performance can be achieved. The type, extent and frequency of in situ testing shall be specified by the Designer. The in situ trials shall be undertaken in advance of the New Works.
- (vii) The Company shall remove, and where possible recycle into the New Works, all redundant areas of existing road pavement from within the New Works Site.
- (viii) All earthworks shall be subject to landform design of the New Works as specified in Section 6 of these New Works Requirements except that any design necessary to ensure short-term and long-term stability shall take precedence.
- (ix) In areas where topsoil depths greater than 150 millimetres are proposed, the Company shall carry out stability assessments and take all necessary measures to ensure topsoil stability.
- (x) The Company shall design earthworks slopes including strengthened earthworks to avoid the need for hard facings.
- (xi) Gabions and crib walling shall not be permitted in any part of the design of the New Works. The Company shall consult and comply with Transport Scotland or the relevant roads authority regarding proposals for necessary works to existing gabions or crib walling.
- (xii) Subject to the requirements of clause 1.5.3(xii) the Company shall provide cut-off drainage lined as required in order to prevent water from undermining cuttings and embankments but also in any case as required by other New Works Requirements, Environmental Commitments, or as specified by the Designer.

Part 2 Specific Requirements

---

- (xiii) The Company shall keep excavations for earthworks and structures free from groundwater and surface water and undertake every reasonable means to ensure that formation is protected from inclement weather. The Company shall remove and replace all materials damaged by water or trafficking at formation level with well compacted suitable granular fill prior to upfilling or before foundation construction.
- (xiv) Certificates shall be provided by the Company to confirm that any geosynthetics / geotextiles used in the New Works shall have a minimum operational life span of 120 years.
- (xv) Excavated materials shall be assessed by the Company for suitability for re-use as acceptable material as defined in the MCHW, Specification for Highway Works, Volume 1, Clause 601. The use of lime or cement treatments may be considered where possible to render excavated materials suitable for reuse in the New Works.
- (xvi) The use of Spent Oil Shale as backfill to structures is not permissible.
- (xvii) The Company shall undertake static load tests or similar at the locations of the proposed BP and Shell pipeline protection structures and proposed railway structures to demonstrate the suitability of the ground to support the proposed structures.
- (xviii) Prior to commencement of any earthworks in the vicinity of any BP or Shell pipeline, the Company shall consult and comply with the requirements of BP or Shell. The Company shall provide Consultation Certificates in respect of this requirement.
- (xix) Prior to commencement of any earthworks in the vicinity of any railway, the Company shall consult and comply with the requirements of Network Rail and / or any other relevant railway undertaker. The Company shall provide Consultation Certificates in accordance with this requirement.

#### 1.6.2 Ground Investigation Report

- (i) The Company shall prepare a Ground Investigation Report ("GIR") as defined in the DMRB for the scheme in accordance with BS EN 1997-2, which may be subdivided and arranged as appropriate. The first GIRs shall be submitted with accompanying documentation within three months of the Commencement Date. Further revised GIRs, updated to take account of any supplementary ground investigations or other relevant additional information, shall be issued at appropriate intervals as the execution of the New Works proceeds. The final GIRs shall be submitted prior to submittal of the relevant Final Construction Certificate(s). The GIRs shall be submitted in accordance with the Certification Procedure.

#### 1.6.3 Geotechnical Design Report

- (i) The Company shall prepare a Geotechnical Design Report as defined in the DMRB for all earthworks, foundations, retaining walls or other geotechnical design elements of the scheme in accordance with BS EN 1997-1, which may be subdivided and arranged as appropriate. The report(s) shall be updated to take account of any supplementary ground investigations or other relevant additional information as the New Works proceed.

## Part 2 Specific Requirements

- 
- (ii) The following additions to clause 2.8(3) of BS EN 1997-1:2004 after the third sub clause “a description of the proposed construction, including actions” shall be added:
    - (a) characteristic values of pile resistances, including justification, as appropriate
    - (b) design values of pile resistances, including justification, as appropriate; and
    - (c) characteristic values of soil and rock properties, including justification, as appropriate
  - (iii) The clause 2.8(3) of BS EN 1997-1:2004 shall be considered to be a principle in the context of the Eurocodes, i.e. 2.8(3) P.
  - (iv) The relevant part(s) of the Geotechnical Design Report(s) shall be submitted to accompany each Structures Design Statement and each Structures Design Certificate. The final report(s) shall be submitted prior to submittal of the relevant Construction Certificate(s).
  - (v) The Geotechnical Design Report(s) shall be submitted in accordance with the Certification Procedure.
  - (vi) The Geotechnical Design Report(s) shall be submitted 28 days in advance of construction of the New Works element.

#### 1.6.4 Geotechnical Feedback Report

Within three months of the completion of construction, the Company shall submit a Geotechnical Feedback Report as defined in the DMRB in the format given in Appendix F of HD22 of the DMRB. The contents of the report shall include, but not be limited to, the following:

- (i) geotechnical records for foundations;
- (ii) geological records;
- (iii) ground investigation and inspection records obtained during the construction phase and summary of any divergences from the assumed ground conditions as presented in Structures Design Statements and Geotechnical Design Report(s);
- (iv) groundwater level monitoring and quality records;
- (v) ground movement monitoring records;
- (vi) piling and embedded retaining wall construction records;
- (vii) as-built location and geometry of all completed works including any temporary works left in-situ with permission of the Contracting Authority;
- (viii) construction records for all Structures, Earthworks and ground improvement techniques;
- (ix) all material compliance test results;
- (x) all integrity test results;
- (xi) all strength measurement test results on materials (concrete cylinder / cube, etc.) for Permanent Works and Temporary Works left in-situ with permission of the Contracting Authority; and
- (xii) all non-conformance reports and completed close out documentation.

## Part 2 Specific Requirements

## 1.6.5 Swallow Holes and Other Naturally Occurring Cavities

- (i) The Company shall carry out an assessment of ground instability in relation to the design of the New Works. Any requirements for mitigation in the design of the New Works (including remedial works such as grouting) shall be identified in the relevant Structures Design Statement and Geotechnical Design Report. A report on the ground instability assessment, together with any design recommendations and / or proposals for remedial works shall be submitted to the Contracting Authority prior to construction of the relevant part of the New Works.
- (ii) Where the design or construction of the New Works requires works which intersect, disturb or enter any swallow hole or naturally occurring cavity, the Company shall consult and comply with requirements of:
- (a) Aberdeen City Council;
  - (b) Aberdeenshire Council; and
  - (c) SEPA;
- as appropriate, within their respective boundaries.
- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (iii) The design, construction and completion of any grouting works and measures to stabilise any swallow hole or naturally occurring cavity shall comply with the following:
- (a) the DMRB; and
  - (b) Appendix 6/11 to the Specification;
- (iv) The Company shall consult and comply with the requirements of SEPA with regard to the design, execution and completion of grouting works, which are regulated under the Water Environment (Controlled Activities) (Scotland) Regulations 2005. The use of PFA for grouting, where applicable, shall be in accordance with Section 4. The design for grouting works shall minimise the mobilisation of contaminated groundwater as far as reasonably practicable. Any contaminated groundwater brought to the surface by such operations shall be subject to appropriate treatment and disposal.
- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (v) Grouting works to treat any swallow hole or naturally occurring cavity shall be designed to ensure complete containment within the Land Made Available by the Scottish Ministers for the New Works and that no land or properties outside the Land Made Available are affected by the New Works.
- (vi) The Design, construction and completion of any grouting works shall include control measures such as barriers, lined cut-off ditches and settlement ponds at each grout location. The control measures shall intercept run-off, contain grout spillage and ensure that any impact of grouting of any swallow hole or naturally occurring cavity on the quality of local watercourses, drains and shallow groundwater shall be prevented. Sediment that shall be collected in ditches or ponds shall be removed and

## Part 2 Specific Requirements

transported off-site at sufficient intervals to prevent over-filling of run-off containment measures.

- (vii) In areas being treated by grouting boreholes at 25 metre intervals along and across the area to be grouted, shall be designated groundwater monitoring holes.

During grouting operations, water levels shall be recorded regularly throughout the day as a control, at not less than three occasions spread evenly throughout the day.

Results shall be made available to the Contracting Authority daily.

On completion of the grouting operations in the area these holes shall be backfilled with grout.

#### 1.6.6 Soil Cuttings

- (i) The tops and bottoms of all cuttings in soil shall be rounded to a minimum radius of two metres over a length of one metre or, where space does not permit, to the maximum radius possible, proposals for which shall be submitted to the Contracting Authority for agreement.
- (ii) Permanent drainage channels shall be constructed at the crest of all cuttings, subject to the provisions of Section 1.5 with the exception of areas where the existing ground profile ensures that water, which would otherwise be intercepted by a drainage channel, is directed away from the crest of the cutting and the slope forming materials. All drainage channels constructed at the crest shall be designed and constructed so as not to allow surface water into the slope forming materials thereby reducing the stability of the cut slope. All crest channels shall be lined. Paving slabs shall not be permitted as a lining for erosion control.
- (iii) The Company shall demonstrate consideration of adequate slope drainage in their design in the Geotechnical Design Report referred to above.
- (iv) Slope drainage shall not be used to ensure long term stability of soil cut slopes. Slope drainage shall be used as an additional measure to improve long term stability. Long term stability shall be ensured by other design considerations. It shall be noted that very shallow and artesian groundwater conditions may be encountered in areas of the New Works Site.
- (v) Where soil cuttings require a mid-slope berm for stability and drainage control purposes, the berm shall be a minimum of three metres wide and be accessible for maintenance.
- (vi) Where environmental bunds are constructed on the top of cutting slopes, the toe of the environmental bund shall be offset from the crest of the slope by a minimum of three metres.
- (vii) All cuttings shall be constructed within the Land Made Available by the Scottish Ministers for the New Works. Where space does not permit a slope angle with adequate stability, alternative stabilisation measures shall be considered.
- (viii) Where soil nails are proposed, they shall be designed using DMRB HA68/94 Volume 4 Section 1 and CIRIA C637: Soil Nailing – Best Practice Guidance (design approach 1-2). Soil nail head design shall take account of Geoguide 7 (GEO Civil Engineering and Development Department,

Part 2 Specific Requirements

---

Hong Kong Government) for recessed soil nail head details. The following requirements apply to soil nail design and execution:

- (a) the presence of deep-seated failure surfaces in the control of overall soil nail length shall be considered;
- (b) in determining critical design surfaces and bond lengths, unfactored parameters with a minimum existing factor of safety = 1.0 shall be used;
- (c) the soil nail head assembly head size requirements shall be determined using DMRB HA68/94; Volume 4, Section one Appendix E/3(a). Concrete head pads shall be used in line with Figure A3.3 of CIRIA C637 with recessed soil nail heads as shown in Figure 5.11 of Geoguide 7. All soil nailed slopes shall be finished so that they are capable of supporting vegetation. Erosion control netting shall be used connected to the soil nail heads on the surface to prevent erosion between the soil nail heads prior to vegetation establishment;
- (d) flexible facings (without a properly designed and dimensioned soil nail head) shall not be allowed; and
- (e) durability of soil nail bars and soil corrosivity shall be assessed in line with guidance included within CIRIA C637.

#### 1.6.7 Rock Cuttings

- (i) Rock cuttings shall be designed and constructed to provide safe and sustainable rock slopes, minimising instability and the requirement for future maintenance and minimising environmental impact.
- (ii) Design and construction of rock cuttings shall be in accordance with Hoek and Bray, Rock Slope Engineering as well as details and advice given in Rock Engineering Guides to Good Practice: Road Rock Slope Excavation (TRL Report 2011).
- (iii) The design and construction of rock excavation works shall minimise the requirement for the provision of any permanent means of rock control or containment, such as rockfall netting, rock catch fences and barriers either on the rock face or verge, and the use of strengthening or support (rock dowels or bolts), concrete buttresses, shotcrete and the like. However, ongoing stability and protection of the public shall take precedence for temporary control and permanent long term performance. The design and construction of the New Works shall include all rock slope stabilisation measures required to ensure that the rock slope is stable and remains stable for its full design life, taking into account weathering and degradation.
- (iv) Any excavation techniques adopted shall not compromise the stability of the rock slopes, or lead to increased risk to the road infrastructure or to the general public for the design life of the road. Excavation techniques (including blasting where permitted - see Section 1.6.11) shall allow for the formation of the appropriately designed drainage ditches and rock trap ditches. Where controlled blasting techniques are used, the blasting design shall prevent bulk blasting damage to the final face of the rock slope, in particular but not limited to at the toe of the finished rock slope.

Part 2 Specific Requirements

---

- (v) The design shall include rockhead berms formed at the contact between sound rock and overlying materials. This is defined as the boundary between material that can be directly excavated using standard machines (such as back-actors) and material that needs to be broken before excavation (for instance, by way of ripping or blasting).
- (vi) The design of rockhead berms shall provide access for inspection and maintenance and shall take into account all geological factors which could lead to instability in the rock at the edge of the berm and / or in the overlying material. Rockhead berms shall be formed to provide a smooth uniformly trimmed surface with a transverse profile (cross fall) which shall dip towards the upper batter. All rockhead berms shall have a minimum effective width of 3.0 metres, after excavation. The effective width shall not include any rounding at the berm edge or irregularity/over excavation in the formation of the lower batter. Rockhead berms shall include for berm drainage channels to collect and control any seepage from the cut face.
- (vii) The design shall include intermediate berms to provide access for maintenance and to break up the appearance of extensive rock slopes exceeding of the order of 10 metres in height.
- All intermediate berms shall have a minimum effective bench width of 3.0 metres. The intermediate berms shall have a transverse profile (cross fall) which shall dip towards the upper rock slope, and shall incorporate drainage measures to discharge the surface water runoff from the cutting slope above the bench and an appropriately sized rock trap designed to accommodate rockfall material from the upper slope(s).
- (viii) In slope raking drains in the excavated rock slope face shall be used in areas of seepage or high groundwater as required.
- (ix) The Company shall have an engineering geologist on site to record rock faces exposed during execution and to assess the requirement for any rock stabilisation measures to address specific conditions encountered that differ to those assumed at the design stage. Full details of these elements of the works shall be included within the Geotechnical Feedback Report described in Section 1.6.4.
- (x) Structures may be founded within rockhead berms providing the stability of the cutting above or below the rockhead berm is not compromised; berm drainage requirements are incorporated; and the requirements for maintenance and inspection as detailed in Clause 2.13 of Volume 5, Schedule 2, Part 2 are met.
- (xi) The requirement for rockhead berms does not prohibit structures being founded within the rockhead berm providing the stability of the cutting above or below the rockhead berm is not compromised; berm drainage requirements are incorporated; and the requirements for maintenance and inspection as detailed in Clause 2.13 of Volume 5, Schedule 2, Part 2 are met.

#### 1.6.8 Existing Natural and Constructed Slopes (including Rock Cuttings)

- (i) The Company shall ensure that the stability of any existing natural or constructed slope (including rock cutting) impacted by or impacting on the New Works shall not:

Part 2 Specific Requirements

---

- (a) adversely affect the long-term stability or safety of the New Works; and / or
    - (b) be adversely affected by the design, execution and completion of the New Works.
  - (ii) The design, construction and completion of the New Works shall be undertaken to ensure that the existing slopes are at least as stable in the long term as the current conditions at any given location.
  - (iii) Where the design of the New Works incorporates, impinges upon, modifies or extends any such slope, or part of any such slope, the requirements for that slope shall be as for new slopes or cuttings.
- 1.6.9 Temporary Works Adjacent to Sections of Live Carriageway
- (i) The Company shall ensure the stability of sections of live carriageway, footpath, railway line, pipeline, structures, buildings and the like adjacent to any temporary works slopes. The Company shall demonstrate stability of live sections of carriageway, footpath, railway line, pipeline, structures, buildings and the like for the duration of any adjacent temporary works slopes by means of appropriate surface movement monitoring.
- 1.6.10 Embankments
- (i) The tops and bottoms of all embankments in soil shall be rounded to a minimum radius of two metres over a length of one metre or, where space does not permit, to the maximum radius possible, proposals for which shall be submitted to the Contracting Authority for agreement.
  - (ii) Where an embankment is constructed on any existing slope steeper than 1in5, the existing surface shall be benched. The maximum height of the bench shall be 500 millimetres.
  - (iii) Topsoil and pockets of soft-soil and loose rock shall be removed from beneath embankments, except where alternative measures in accordance with the New Works Requirements and Specification are proposed in the Design of the New Works.
  - (iv) The Company shall take measures to ensure that the settlement of embankments shall be substantially complete before the road pavement shall be constructed.
  - (v) All embankments greater than 5m in height constructed from Class 2 material constructed on cohesive foundations shall incorporate a granular starter layer of 1000mm thickness, except where the Company demonstrates that alternative embankment foundation proposals have no adverse impact upon the short and long term stability of the embankment.
- 1.6.11 Blasting
- (i) Blasting shall only be permitted with the prior written approval of the Contracting Authority, which shall not be unreasonably withheld.
  - (ii) Blasting shall not be permitted in the excavations for foundations of structures without the prior approval of the Contracting Authority.
  - (iii) All blasting activities shall meet the requirements of the Environmental Statement and Appendix 1/9 to the Specification.
  - (iv) The Company shall consult and comply with:

Part 2 Specific Requirements

---

- (a) Aberdeen City Council;
- (b) Aberdeenshire Council;
- (c) the Scottish Ministers Trunk Road North East Management Unit;
- (d) SNH;
- (e) Network Rail;
- (f) BP; and
- (g) Shell.

as appropriate, before being permitted approval for blasting within or adjacent to their respective boundaries. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (v) A detailed blasting assessment report shall be submitted to the Contracting Authority a minimum of 21 days prior to any blasting taking place for all features within influencing distance of the production blasts, including precondition surveys of, as appropriate:
  - (a) adjacent buildings and retaining walls;
  - (b) railways;
  - (c) highways structures;
  - (d) utilities and services;
  - (e) water tunnels and the like;
  - (f) embankments; and
  - (g) slopes, including rock, soil and fill.
- (vi) The contents of the blasting assessment report shall include, as a minimum, geology, mining, hydrology, relevant ground investigation details, layout of proposed blasting zones, overview of sensitive receivers and calculations shall be provided to show limiting vibrations (peak particle velocity and peak particle acceleration) air-overpressures and anticipated maximum charge–weights per delay allowed for all of the above listed sensitive receivers. The influencing distance of the blast shall be determined as part of the report.
- (vii) The Company shall carry out trial blasts utilising their proposed blasting plan, to demonstrate the Company's ability to satisfy the requirements for both blasting vibration and rock cutting stability at the location of each rock cutting, and to determine relevant blasting constants and parameters for production blast design, prior to production blasts. The blasting trials shall follow the recommendations of Research Report 53 "Ground Vibration caused by Civil Engineering Works", published by the UK Transport Research Laboratory in 1986, ISBN 0266-5247. Method statements shall be produced by the Company detailing, but not limited to, trials to be carried out together with monitoring, testing and records to be made and requirements for inspection and logging of formations and cut faces on completion of excavation.
- (viii) A minimum of three vibrographs shall be used to record ground vibration and air overpressure, with a minimum of one vibrograph at each location of either infrastructure or property that could be affected by the blasting.

## Part 2 Specific Requirements

- 
- (ix) The Company shall use the results to ensure that production blasts do not exceed the required vibration and air overpressure limits. Method statements shall be produced detailing, but not limited to, proposals for the control of flyrock and overbreak, controlled blasting requirements and permitted stage heights.
- (x) The blast designs and execution of the blasting works shall be undertaken using references and regulations including, but not limited to, The Quarries Regulation (1999); BS5607, 1998 Code of Practice for the Safe Use of Explosives;- Environmental Protection Act 1990; BS6472:1992; BS 7385-1:1990, BS 7385-2:1993 Scottish Executive Department Planning Advice Note 50 (PAN 50) Annex D, Part 3LR1094 (Pre-split Blasting for Highway Rock Excavation, 1983) and SR 817 (Device for measuring Drill rod and Drill Hole Orientation, 1984), published by the UK Transport Research Laboratory. The use of pre-split blasting for control, damage to the rock mass as well as stability shall be considered, with due cognisance of the final appearance of the rock slope face.
- (xi) A post-blasting operations condition survey shall be undertaken of all features covered in the blasting assessment report and the results provided to the Contracting Authority in accordance with the Certification Procedure.
- (xii) The Company shall liaise with land and property owners and occupiers, as appropriate, adjacent to the New Works and take all necessary measures to minimise disturbance or intrusion to the general public and to prevent surprise or alarm being caused to the public and livestock during the execution of the New Works.

Prior to any rock blasting, the Company shall be responsible for notifying the public of any proposed blasting activities in accordance with the following:

- (a) The Company shall advise the public of all proposed blasting activities forming part of the Works, and shall safeguard the public against such activities.
- (b) The Company shall issue written notification to all households, businesses, public buildings and any other occupied premises within 500 metres of the blast site of any imminent blasting activities no later than 14 days in advance of the commencement of the activities. Additionally, the Company shall publicise the work with an advisory notice which shall be published in the local press and shall be posted at public buildings and offices and other locations as required by the Contracting Authority no later than 14 days in advance of the activities.
- (c) Where possible blasting shall be carried out at the same time or times on each date.
- (d) Written notification and public notices shall include the following information as a minimum:
- Location of the proposed blasting activities;
  - Precise dates and times of blasts;

Part 2 Specific Requirements

---

- The name and address and telephone number of a contact within the Company's organisation who shall deal with queries from members of the public;
  - The period over which the blasting shall be undertaken; and
  - Details of audible and visual warnings to be provided prior to all individual blasts.
- (xiii) The Company shall remedy any defects in the New Works or damage to adjacent properties or features caused by the blasting operations, as determined by the Contracting Authority.

**1.6.12 Rock Excavation by Chemical Means**

- (i) The use of chemical non-explosive rock splitting agents or rapid expansion techniques shall be permitted to break out massive and competent rock horizons, combined with mechanical excavation as required, subject to the implementation of an adequate risk management system.

**1.6.13 Topsoil**

- (i) The Company shall ensure that topsoil handling and storage shall be undertaken in accordance with the Specification and the following:
- (a) Where the Company identifies topsoil from a particular source that shall be intended to be re-spread in a specified location within the New Works, the Company shall stockpile the topsoil separately and mark the storage location on a plan.
  - (b) Stockpiled vegetation and upper soil horizons shall be stored separately from lower soil horizons.
  - (c) Soil stockpiles shall not be placed over the rooting zone of mature trees, in areas where existing trees / habitats may be damaged or where surface run-off may cause pollution.
  - (d) Soil stockpiles shall be located away from any watercourses.
- (ii) Topsoil depths in the New Works shall be as follows:
- (a) where sowing grass seed the depth shall be a minimum of 100 millimetres;
  - (b) in areas to be planted with trees and shrubs, with the exception of rock cuts, the depth shall be a minimum of 300 millimetres; and,
  - (c) in areas of land potentially to be returned to agriculture, topsoil depth shall be a minimum of 400 millimetres.
- (iii) In areas to be seeded with a combined mix of grass and wildflowers existing topsoil shall be removed prior to seeding. No topsoil shall be spread in areas to be seeded with a combined mix of grass and wildflowers except in areas of proprietary soil retention matting.

**1.7 Road Pavement****1.7.1 General**

- (i) The road pavement Design for roads as described in Table 1 of Schedule 19 of the Agreement, other than New Access Roads/Tracks, shall be in

## Part 2 Specific Requirements

accordance with the requirements of the DMRB and the Highways Agency Interim Advice Note 73/06 (Draft HD 25).

- (ii) The Design shall include the assessment of traffic for the purpose of pavement Design for all roads listed in Table 1A.
- (iii) The road pavement design for all roads listed in Table 1B shall be based on the Design Traffic (msa) figures provided in Table 1B, which are msa figures for a 40 year design life.

**Table 1A Trunk Roads which shall become the maintenance responsibility of the Company**

| Road name                                                  | Road located between Reference Points |
|------------------------------------------------------------|---------------------------------------|
| A90 AWPR Northbound (Stonehaven to Cleanhill)              | A01 to A02                            |
| A90 AWPR Southbound (Cleanhill to Stonehaven)              | A02 to A01                            |
| A90 AWPR Northbound (Cleanhill to Milltimber)              | A03 to A05                            |
| A90 AWPR Southbound (Milltimber to Cleanhill)              | A04 to A03                            |
| A90 AWPR Northbound (through Milltimber Junction)          | A05 to A07                            |
| A90 AWPR Southbound (through Milltimber Junction)          | A06 to A04                            |
| A90 AWPR Northbound (Milltimber to South Kingswells)       | A07 to A08                            |
| A90 AWPR Southbound (South Kingswells to Milltimber)       | A09 to A06                            |
| A90 AWPR Northbound (through South Kingswells Junction)    | A08 to A11                            |
| A90 AWPR Southbound (through South Kingswells Junction)    | A10 to A09                            |
| A90 AWPR Northbound (South Kingswells to North Kingswells) | A11 to A12                            |
| A90 AWPR Southbound (North Kingswells to South Kingswells) | A13 to A10                            |
| A90 AWPR Northbound (North Kingswells to Craibstone)       | A12 to A15                            |
| A90 AWPR Southbound (Craibstone to North Kingswells)       | A14 to A13                            |
| A90 AWPR Northbound (through Craibstone Junction)          | A15 to A17                            |
| A90 AWPR Southbound (through Craibstone Junction)          | A16 to A14                            |
| A90 AWPR Northbound (through Craibstone Junction)          | A17 to A18                            |
| A90 AWPR Southbound (through Craibstone Junction)          | A19 to A16                            |
| A90 AWPR Northbound (Craibstone to Goval)                  | A18 to A20                            |
| A90 AWPR Southbound (Goval to Craibstone)                  | A21 to A19                            |
| A90 AWPR Northbound (through Goval Junction)               | A20 to A22                            |
| A90 AWPR Southbound (through Goval Junction)               | A23 to A21                            |
| A90 AWPR Northbound (Goval to Blackdog)                    | A22 to A24                            |
| A90 AWPR Southbound (Blackdog to Goval)                    | A24 to A23                            |

## Part 2 Specific Requirements

| <b>Road name</b>                                                        | <b>Road located between Reference Points</b> |
|-------------------------------------------------------------------------|----------------------------------------------|
| A956 AWPR Eastbound (Cleanhill to Charleston)                           | A25 to A26                                   |
| A956 AWPR Westbound (Cleanhill to Charleston)                           | A26 to A25                                   |
| Milltimber Junction Northbound Diverge Slip Road                        | A27 to A28                                   |
| Milltimber Junction Southbound Merge Slip Road                          | A29 to A30                                   |
| Milltimber Junction Northbound Merge Slip Road                          | A31 to A32                                   |
| Milltimber Junction Southbound Diverge Slip Road                        | A33 to A34                                   |
| South Kingswells Junction Northbound Diverge Slip Road                  | A35 to A36                                   |
| South Kingswells Junction Southbound Merge Slip Road                    | A37 to A38                                   |
| South Kingswells Junction Northbound Merge Slip Road                    | A39 to A40                                   |
| South Kingswells Junction Southbound Diverge Slip Road                  | A41 to A42                                   |
| North Kingswells Junction Northbound Merge Slip Road                    | A43 to A44                                   |

Reference Points as noted in Tables 1A and 1B above are as shown on the Reference Drawings as described in Appendix 0/4 to the Specification.

- (iv) Subject to the other provisions of this Agreement, the Company shall consult and comply with the requirements of:

- (a) Transport Scotland
- (b) Aberdeen City Council; and
- (c) Aberdeenshire Council

as appropriate in connection with the pavement Design for all carriageway tie-ins that extend out-with the Reference Points described in Table 1 of Schedule 19 of the Agreement.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (v) Notwithstanding the pavement Design:
- (a) at roundabouts, the traffic flows used in the pavement Design on the circulatory carriageway and all arms for 50 metres from the Give Way line or up to the limits of the New Works Site shall be taken as 125 per cent of the most onerous traffic flow of the adjacent arms; and
  - (b) at junctions the traffic flows used in the pavement Design for the major road shall be used in the pavement Design for the minor road up to the corner radii tangent points on the minor road.
- (vi) The Design shall ensure that the road pavement shall extend transversely over the entire width of the carriageway, including adjacent slip roads from/to the back of the merge/diverge nose, and longitudinally between the

## Part 2 Specific Requirements

Reference Points of all roads as described in Table 1 of Schedule 19 of the Agreement.

- (vii) Porous asphalt surface courses shall not be permitted in the Design.
- (viii) Rolling crowns, as noted in DMRB HD33/06 paragraph 2.3, shall not be permitted in the New Works.
- (ix) Vertical joints between existing and new construction shall be painted with a polymer modified bond coat to Clause 920 of the Specification. The positioning of these joints within the wheel track zones shall be avoided although in areas where this is not viable, then appropriate strengthening measures shall be taken to ensure that the risk of reflective cracking is prevented. The joints shall be chamfered at 60 to 70 degrees where possible in order to aid the compaction of the adjoining new material.
- (x) The new surface course shall be constructed using an echelon paving technique.
- (xi) A bond coat shall be applied between all new bound pavement layers as well as between any of the existing layers and any overlay layer. The bond coat shall be a polymer modified bond coat to Clause 920 of the Specification. Where the overlying layer is required to be a thin surface course, the bond coat shall be appropriate to the requirements of the manufacturer of the system in question.

1.7.2 Specific Requirements for roads listed in paragraph 1.7.1 Table 1A.

- (i) The Design shall ensure that the surface course shall be a Transport Scotland approved polymer modified binder based thin surface course to Clause 942 of the Specification or TS2010 as introduced by Transport Scotland Interim Amendment Number 35.
- (ii) The thin surface course system shall have road/tyre noise levels to level 2, as defined in Clause 942.8 of the Specification and Table NG9/30 of Volume 2 of the MCHW.
- (iii) The Company may adopt alternative pavement Design standards to those contained in the DMRB and the Highways Agency Interim Advice Note 73/06, and alternative material specifications for all pavement materials other than the thin surface course system.
- (iv) Notwithstanding the foregoing, the use of rigid pavement construction shall not be permitted in the Design except for continuously reinforced concrete pavement (CRCP) which shall only be permitted in the Design if it is overlaid with a surface course in accordance with Paragraph 1.7.2 (i).
- (v) Notwithstanding any other provisions of this Agreement the minimum PSV of coarse aggregate in unchipped surfaces for the Design shall be 60.

1.7.3 Specific Requirements for roads listed in paragraph 1.7.1 Table 1B which shall become the maintenance responsibility of Transport Scotland as referenced in Table 1 of Schedule 19 of the Agreement

- (i) The Design shall ensure that the surface course shall be a Transport Scotland approved polymer modified binder based thin surface course to surface course specification TS2010, as introduced by Transport Scotland Interim Amendment Number 35, with a minimum thickness of 35 millimetres unless otherwise specified. The requirement within TS2010 for

Part 2 Specific Requirements

---

- a performance guarantee in accordance with Clause 942 of the Specification for Highway Works shall apply to surface integrity only.
- (ii) The thin surface course system shall have road/tyre noise levels to level 2, as defined in Clause 942.8 of the Specification and Table NG9/30 of Volume 2 of the MCHW.
  - (iii) All surface course systems specific to variants listed within this Section shall be required to undergo the Type Approval Installation Trial (TAIT) process detailed in TS2010 unless the proposed system holds a Certificate of Approval gained from a previous TAIT that was specific to the following variants:
    - (a) mixture design;
    - (b) production plant;
    - (c) surfacing subcontractor; and
    - (d) PSV declared
  - (iv) No system shall be used within the New Works unless it holds a Certificate of Approval gained from a previous TAIT or has been granted Approval to Proceed.
  - (v) For each individual system as outlined in Section 1.7.3 (ii), a trial panel comprising of not less than 20 tonnes of the proposed mixture and of a full lane width shall be used for Stage 2 of the TAIT process and for the skid resistance compliance testing performed after 4 weeks within Stage 3 of the TAIT process. The location and volume of vehicular traffic for the panel(s) shall be agreed with the Contracting Authority. Approval to Proceed shall be granted for systems demonstrated to be compliant with the 4 week skid resistance requirements stated in Table 2.7 of TS2010.
  - (vi) Transport Scotland Interim Approval shall be granted for a surface course system following the successful demonstration of compliance with the relevant skid resistance requirements stated in Table 2.7 of TS2010 after 6 months of trafficking.
  - (vii) Transport Scotland Final Approval shall be granted for a surface course system following the successful demonstration of compliance with the relevant skid resistance requirements stated in Table 2.8 of TS2010 after 2 years of trafficking and following review of the performance of the material.
  - (viii) The Company shall provide a "Thin Surface Course System Approval Certificate" in accordance with the Certification Procedure.
  - (ix) The Company shall be required to carry out all skid resistance compliance surveys associated with the TAIT approval process for a particular surface course system.
  - (x) Where full depth pavement construction is provided in the New Works it shall have a minimum thickness of 450 millimetres.
  - (xi) The base and binder course materials shall be EME2.
  - (xii) The nominal aggregate size for the binder course layer shall be 10 millimetres and for base layers the nominal aggregate size shall be 14 millimetres.

## Part 2 Specific Requirements

- 
- (xiii) Notwithstanding any other provisions of this Agreement the minimum polished stone value (“PSV”) of coarse aggregate in un-chipped surfaces shall be 60.
  - (xiv) The foundation class shall be Class 3, as detailed in IAN73/06, and shall be tested in-line with the methodology outlined in Highways Agency IAN73/06.
  - (xv) Where the existing pavement is to be retained and strengthened by overlay, the existing surface course shall be removed prior to the placement of the new bituminous material.
  - (xvi) Where the pavement design uses the existing pavement the requirement of Highways Agency IAN73/06 to provide a constant thickness of all foundation layers over the full width of the pavement shall not apply.
  - (xvii) The requirements of Highways Agency IAN73/06 to maintain continuity of drainage of the pavement foundation and to provide a down slope route from the sub-base to the subsurface drain shall apply and the Company shall ensure compliance.
  - (xviii) All lanes of the carriageway(s) and, where applicable, hard strips, hard shoulders, lay-bys, bus lay-bys and maintenance crossing points for all roads described in Table 1 of Schedule 19 of the Agreement shall be sufficient to carry the design traffic in the left hand lane of the relevant carriageway.
  - (xix) Notwithstanding the foregoing the use of rigid pavement construction shall not be permitted in the Design except for continuously reinforced concrete pavement (CRCP) which shall only be permitted in the Design if it is overlaid with a surface course in accordance with Paragraph 1.7.3 (ii).
  - (xx) Temporary running shall not be permitted on planed surfaces.
  - (xxi) Where a regulating material is required then this shall be stone mastic asphalt complying with Clause 937 or base or binder course asphalt concrete complying with Clause 929 or hot rolled asphalt complying with Clause 943.
  - (xxii) Where existing gullies and ironwork are to be removed within proposed running lanes then the full depth of pavement shall be removed and replaced with a pavement construction that shall meet the appropriate design loading requirements. Areas being rectified shall form a minimum width of 1.8 metres and be at least 5 metres in length. Each new layer shall be stepped-in by a minimum of 150 millimetres transversely and 500 millimetres longitudinally with the joints being treated in accordance with clause 1.7.1 (ix). The bearing capacity of the existing sub-base shall be tested prior to the placement of the new bituminous material with a minimum CBR of 30% being required. Where the CBR falls below 30% then the material shall be replaced with a new foundation construction designed in accordance with IAN 73/06 (HD 25) and HD26. Where full depth pavement construction is provided in the Works it shall have a minimum design thickness of 450 millimetres of non-frost susceptible material.
  - (xxiii) The Company shall ensure that directional drilling is undertaken where drains, services and the like are required to cross carriageways. Open carriageway trenching shall not be permitted without prior agreement from the Contracting Authority.

## Part 2 Specific Requirements

- 
- 1.7.4 Specific Requirements for roads listed in paragraph 1.7.1 Table 1B which shall become the maintenance responsibility of Aberdeen City Council and/or Aberdeenshire Council as referenced in Table 1 of Schedule 19 of the Agreement
- (i) The Side Road pavement Design for all roads described in Table 1B of Schedule 19 of the Agreement within the Council boundaries shall be designed for a 40-year Design life in accordance with the DMRB.
  - (ii) The pavement Design of these roads shall ensure that where the pavement of any of the existing roads affected by the New Works shall be incorporated, its residual life shall be assessed and the total pavement construction shall provide a Design life equivalent to that for new pavements in accordance with the DMRB.
  - (iii) The use of the Analytical Approach Design Method outlined in HD26 of the DMRB shall not be permitted in the pavement Design of these roads when standard Designs and standard materials as defined in HD26 of the DMRB are used in the Design.
  - (iv) In respect of Figure 2.1 of HD26 of the DMRB and notwithstanding any other provision of this Agreement, for these roads the pavement Design thickness of combined bituminous layer shall be inclusive of the full thickness of the chosen surface course material.
  - (v) In respect of Figure 2.1 of HD26 of the DMRB and notwithstanding any other provision of this Agreement, for these roads the pavement Design shall ensure that the binder course and base course shall perform in conjunction with the chosen surface course as identified in Clause 911 of the Specification.
  - (vi) The Company shall consult and comply with:
    - (a) Aberdeen City Council; and
    - (b) Aberdeenshire Councilas appropriate with regard to the Pavement Design for these roads.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
  - (vii) The pavement Design for these roads shall ensure that all flexible pavements shall incorporate a binder course which shall be at least 55 millimetres thick.
  - (viii) The Company's choice of binder course material shall be compatible with the choice of surface course material.
  - (ix) In all cases where asphaltic material shall be used in the pavement Design for these roads it shall be to BS 594987 & BS EN 13108/BS PD 6691.
  - (x) In addition, asphaltic material in the pavement for these roads shall be a 'preferred' mix as identified in BS 594987.
  - (xi) The existing surface course(s) shall be removed prior to the placement of the new bituminous material.
  - (xii) New surface course(s) for these roads shall be Hot Rolled Asphalt.
  - (xiii) Paragraph 7.23 of HD30 of the DMRB shall be deleted and replaced with the following:

Part 2 Specific Requirements

---

“If Heavy Duty Macadam (HDM) or Dense Bitumen Macadam with 50 penetration grade binder (DBM50) or High Modulus Base Material with 35 penetration grade binder (HMB35) shall be used in the Design, then some reduction in overlay thickness shall be possible. This shall be calculated by applying a maximum 5 percent reduction to the total thickness of base and binder course materials which would be required when using Dense Bitumen Macadam (DBM) or Hot Rolled Asphalt (HRA) base and binder course materials to give the total thickness of base and binder course materials required. Allowance should be made for any deterioration or any other deficiencies. The pavement Design for these roads shall incorporate between each asphaltic pavement layer and the overlying surface course system, a polymer modified bond coat to Clause 920 to Volume 1 of the MCHW, applied as manufacturers’ recommendations. Where the overlying layer shall be a thin surface course system the bond coat shall be appropriate to the requirements of the manufacturer of the system in question.”

- (xiv) The use of rigid, rigid composite and flexible composite pavement construction shall not be permitted in the Design.
- (xv) The Design shall ensure that where the pavement incorporates any existing pavement concrete overlays shall not be permitted.
- (xvi) The requirements of the Highways Agency Interim Advice Note 73/06 (Draft HD 25) to maintain continuity of drainage of the pavement foundation and to provide a down slope route from the sub-base to the subsurface drain shall apply in the Design.
- (xvii) The Design shall ensure that all lanes of the carriageway(s) and, where applicable, hard strips, hard shoulders, lay-bys, bus lay-bys and maintenance crossing points for all of these roads shall be sufficient to carry the Design traffic in the left hand lane of the relevant carriageway.
- (xviii) Where full depth pavement construction shall be provided in the Design it shall have a minimum thickness of 450 millimetres.
- (xix) Joints between existing and new construction shall be painted with a polymer modified bond coat to Clause 920 of the Specification. The positioning of these joints within the wheel track zones shall be avoided although in areas where this is not viable, then appropriate strengthening measures shall be taken to ensure that the risk of reflective cracking is prevented. The joints shall be chamfered at 60 to 70 degrees where possible in order to aid the compaction of the adjoining new material.
- (xx) Temporary running shall not be permitted on planed surfaces.
- (xxi) Where a regulating material is required then this shall be base or binder course asphalt concrete complying with Clause 929 or hot rolled asphalt complying with Clause 943.
- (xxii) The Company shall ensure that directional drilling is undertaken where drains, services and the like are required to cross existing and new carriageways in the New Works. Open carriageway trenching shall not be permitted without prior agreement from the Contracting Authority.
- (xxiii) Notwithstanding any other provisions of this Agreement the minimum PSV of chippings for the Design shall be 55.

Part 2 Specific Requirements

---

- (xxiv) The use of HMB35 material as per HD26 of the DMRB shall not require a Departure from Standard to be granted by the Overseeing Organisation.
- (xxv) Where HMB35 material shall be used as a base course in the pavement design then the corresponding binder course forming part of such design shall be HMB35 material.
- 1.7.5 Road pavement for New Access Road/Tracks and Accommodation Works Access Tracks:
- (i) Bituminous surfaced access construction type, AR1, shall comprise:
- (a) 300 millimetres thick type 1 sub-base to Clause 803 of the Specification;
  - (b) 100 millimetres thick Dense Bitumen Macadam to Clause 903 of the Specification; and
  - (c) 50 millimetres thick Close Graded Bitumen Macadam to Clause 912 of the Specification.
- (ii) Concrete access construction type, AR2, shall comprise:
- (a) 300 millimetres thick type 1 sub-base to Clause 803 of the Specification; and
  - (b) 150 millimetres thick C40 concrete to BS5328 surfacing with expansion joints at 40 metres centres and contraction joints at 4 metres centres (see Drawing Numbers C1, C2 and C3 to Volume 3 of the MCHW). The surface finish shall be tamped or brushed.
- (iii) Unsurfaced access construction type, AR3, shall comprise:
- (a) 300 millimetres minimum thick capping material class 6F1, 6F2 or 6F3 to Clause 613 of the Specification; and
  - (b) 150 millimetres thick type 1 sub-base to Clause 803 to Volume 1 of the MCHW, sealed with rolled/vibrated crushed rock fines.
- (iv) The access construction type for New Access Roads/Tracks, shall be as stated in Table 1C.

## Part 2 Specific Requirements

Table 1C New Access Road/Tracks Construction

| Road Name                                                                  | Road Located between Reference Points | Access Construction Type<br>(Refer to clause 1.7.5 (i), (ii) and (iii)) |
|----------------------------------------------------------------------------|---------------------------------------|-------------------------------------------------------------------------|
| Mains of Ury Retention Pond Access Track Turning Head                      | D03 to D04                            | AR1 or AR2 or AR3                                                       |
| Megray Farm Access Road                                                    | D05 to D06                            | AR1                                                                     |
| Allochie Access Track                                                      | D07 to D08                            | AR1 or AR2 or AR3                                                       |
| Combined Burn of Muchalls Retention Pond and Emergency Lay-by Access Track | D09 to D10                            | AR1                                                                     |
| Burn of Muchalls Retention Pond Access Track Turning Head                  | D11 to D12                            | AR1                                                                     |
| Combined Field and Emergency Lay-by Access Track                           | D13 to D14                            | AR1                                                                     |
| North Cookney Access Road                                                  | D15 to D16                            | AR1                                                                     |
| North Cookney Croft Access Road (1)                                        | D17 to D18                            | AR1                                                                     |
| North Cookney Croft Access Road (2)                                        | D19 to D20                            | AR1                                                                     |
| Combined Field Access/East Rothnick Retention Pond Access Track            | D21 to D22                            | AR1 or AR2 or AR3                                                       |
| East Rothnick Retention Pond Access Track                                  | D23 to D24                            | AR1 or AR2 or AR3                                                       |
| North Rothnick Access Road                                                 | D25 to D26                            | AR1                                                                     |
| Rothnick to Crossley Access Track                                          | D27 to D28                            | AR1 or AR2 or AR3                                                       |
| Kingcausie/Eastland Access Road                                            | D29 to D30                            | AR1                                                                     |
| Kingcausie Access Road                                                     | D31 to D32                            | AR1 or AR2 or AR3                                                       |
| Kingcausie Access Track                                                    | D33 to D34                            | AR1 or AR2 or AR3                                                       |
| Milltimber Retention Pond Access Track                                     | D35 to D36                            | AR1 or AR2 or AR3                                                       |
| Milltimber Retention Pond Access Track Turning Head                        | D37 to D38                            | AR1 or AR2 or AR3                                                       |
| Kippie Lodge Track                                                         | D39 to D40                            | AR1                                                                     |
| Laggan Cottage Access Road                                                 | D41 to D42                            | AR1                                                                     |
| Hill of Milltimber Access Road                                             | D43 to D44                            | AR1                                                                     |

## Part 2 Specific Requirements

| New Access Road/Track to Foveran Detention Basin B          | D244 to D245                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track to Foveran Detention Basin A          | D247 to D248                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track to Dambrae Detention Basin - Access 1 | D249 to D250                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track to South Orrock Detention Basin       | D251 to D252                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track at Balmedie Link Road                 | D253 to D254                                 | AR1                                                                                   |
| New Access Road/Track to Balmedie Detention Basin           | D255 to D256                                 | AR1                                                                                   |
| New Access Road/Track - South from Balmedie                 | D257 to D279                                 | AR1 or AR2 or AR3                                                                     |
| New Access Track to Easter Hatton Detention Basin           | D261 to D262                                 | AR1 or AR2 or AR3                                                                     |
| New Access - South Orrock Underpass                         | D263 to D264                                 | AR1 or AR2                                                                            |
| New Access Road/Track from Bog Roy                          | D265 to D266                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/ Track to Rashierieve                       | D267 to D268                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track at Cairnie Law                        | D269 to D270                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track at Southlea                           | D271 to D272                                 | AR1 or AR2 or AR3                                                                     |
| New Access Road/Track from Bridgend Access Road             | D275 to D276                                 | AR1                                                                                   |
| New Access Track - Balmedie Detention Basin                 | D277 to D278                                 | AR1                                                                                   |
| Existing ANM/Taylor's Access Track                          | D258 to D279                                 | AR1 or AR2 or AR3                                                                     |

## 1.8 Kerbs, Footways, Paved Areas, Lay-bys and Bus Stops

### 1.8.1 Kerbing

- (i) Kerbing shall be provided in the Design as described in Table 1 of Schedule 19 of the Agreement together with the following:
  - (a) all turning areas;
  - (b) all lay-bys and bus lay-bys;
  - (c) all non-motorised Users crossings;
  - (d) Police observation platforms;
  - (e) ITS maintenance hard-standing areas;
  - (f) Bridge decks; and
  - (g) On side roads under Underbridges.
- (ii) Where a footway is adjacent to a carriageway or within 2 metres of a carriageway, the carriageway kerbing shall be half battered. At all other locations where kerbing is required, splay kerbing shall be used unless otherwise specified. Precast concrete flat top kerbing shall be used to edge the footway in the absence of a carriageway kerb.
- (iii) Dropped kerbs shall be provided at all non-motorised Users crossings and shall be suitable for pedestrians with prams and disabled using a wheelchair.
- (iv) Where the area at the drop crossing is not sufficiently drained using a road drainage gully upstream of the crossing then a combined kerb and drainage type drop kerb shall be used to ensure the crossing stays free from ponding of water.
- (v) The Company shall consult and comply with the requirements of;
  - (a) Aberdeen City Council; and
  - (b) Aberdeenshire Council;as appropriate with regard to all details for the provision of dropped kerb arrangements for Side Roads.

### 1.8.2 Footways, Footpaths and Combined Footways/cycle tracks

- (i) Notwithstanding the other requirements of this Agreement, the Design for footways, footpaths and combined footway/cycle tracks shall comprise:
  - (a) 150 millimetres of type 1 sub-base to Clause 903 of the Specification;
  - (b) 50 millimetres dense macadam binder course to Clause 906 of the Specification; and
  - (c) 25 millimetres rolled asphalt surface course to Clause 909 of the Specification.

Prior to compaction of surface course, 6 millimetre or 10 millimetre white limestone chippings shall be applied at a rate of 1 kilogram per square metre.

## Part 2 Specific Requirements

- 
- (ii) Footways, footpaths and combined footway/cycle tracks shall include but shall not be limited to those described in Table 2 of Schedule 19 of the Agreement and elsewhere in these New Works Requirements.
- Allowance shall be made in the Design to accommodate widths and tie-ins and any other features affecting the width and otherwise of the footways, footpaths and combined footway/cycle tracks.
- Where possible, footways and cycle tracks shall be out-with the road edge.
- (iii) Footways, footpaths and combined footway/cycle tracks in the Design shall be constrained by pre-cast concrete kerbing and edging.
- (iv) Notwithstanding the requirements of 1.1.9 (ii) footways, footpaths and combined footway/cycle tracks in the Design shall have a maximum crossfall of 2.5 percent.
- (v) Footways, footpaths and combined footway/cycle tracks in the Design shall tie-in to existing footways, footpaths and combined footway/cycle tracks at all interfaces and extremities of existing footways, footpaths and combined footway/cycle tracks respectively.
- (vi) The asphaltic layers of footways, footpaths and combined footway/cycle tracks shall be machine laid.
- (vii) All footways, footpaths and combined footway/cycle tracks in the Design shall incorporate sufficient drainage to ensure that they shall be kept free from standing water.
- (viii) Immediately prior to the laying of type 1 sub-base the formation shall be treated with an application of weed killer.
- (ix) The Design shall include tactile paving slabs over the full width of footways, footpaths and combined footway/cycle tracks at road crossings. Tactile paving slabs shall be light grey in colour.
- (x) Notwithstanding the requirements of 1.8.2(i) to 1.8.2(xi) inclusive, combined footway/cycle tracks shall be designed in accordance with TA90 of the DMRB and "Cycling by Design" 2010, Scottish Executive.
- (xi) The Company shall consult and comply with the requirements of Sustrans with regard to the Design for kerbing, crossing points and access points from adjacent roads on combined footway/cycle tracks and otherwise forming part of the National Cycle routes in the vicinity of the New Works Site.
- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

### 1.8.3 Paved Areas

- (i) Pedestrian refuge islands shall be of flexible construction in accordance with paragraph 1.8.2(i).
- (ii) Deflection islands less than 20 square metres in area shall be of flexible construction in accordance with paragraph 1.8.2(i).
- (iii) Deflection islands larger than 20 square metres in area, the outer circumference to roundabouts and roundabout entry and exit roads shall have their outer edge (i.e. behind the kerb) paved with 80 millimetres deep concrete pavements to a width of 0.7 metres and this paving shall extend to

Part 2 Specific Requirements

---

the limit of the radii of the roundabouts and roundabout entry and exit roads.

- (iv) Roundabout central islands shall have 80 millimetre deep concrete pavements to a width of 2.0 metres. The Design shall include chevron block pavements as per diagram 515.2 of the Traffic Signs Regulations and General Directions 2002.
- (v) The central reserve on new Trunk Roads shall consist of 20mm single size chippings, to a minimum depth of 100mm and shall incorporate a vegetation repressing membrane. The chippings shall be light grey in colour.

#### 1.8.4 Hard Landscaping Requirements for areas around Traffic Scotland Equipment (TSE), Lighting Pillars and Traffic Signal Pillars.

- (i) The Company shall provide hard landscaping around each TSE site or group of sites, lighting control pillars and traffic signal control pillars. The typical layout for hard landscaping at these locations is shown in the NDX Drawings as listed in Appendix 0/4 to the Specification in Schedule 2, part 3.
- (ii) Hard landscaping shall comprise but shall not be limited to access paths and steps, pedestrian handrails and vehicle hard standings and any necessary structures and retaining walls. The hard landscaping shall ensure safe use of and maintenance of all equipment
- (iii) Paving around each TSE site shall be standardised but detailed to suit each equipment site.
- (iv) The Company shall ensure that the hard landscaping for each site enables future maintenance works to be undertaken without presenting a hazard to maintenance personnel or damage to adjacent slopes or landscaping.
- (v) Where more than one item of equipment is located at the site the paving shall be installed to create an integrated site preventing the need for soft landscaping maintenance to be undertaken within the grouping of equipment.
- (vi) Paths and steps shall be provided from the location where maintenance personnel will park their vehicle to the paving around the equipment without any detrimental effect on the operation of the network and the need for traffic management. Paths and steps shall have a minimum clear width of one metre. The combined length of the path and steps shall be a maximum of 50 metres unless otherwise agreed by the Contracting Authority.
- (vii) A vehicle hard standing shall be provided at the edge of the carriageway at each TSE VMS Site to enable maintenance personnel to park and access their vehicle safely off the carriageway. The vehicle hard standing surface shall be concrete cellular grassed paving except for areas where pedestrians may walk. A typical layout is shown on NDX drawing number 1072 as listed in Appendix 0/4 to the Specification in Schedule 2, Part 3.
- (viii) Retaining walls shall be permitted as required to enable the installation of an equipment site and any associated hard landscaping.

## Part 2 Specific Requirements

- (ix) A paved area of not less than two square metres shall be provided to give a working area in front of each Traffic Equipment Distribution Pillar (TEDP) and TP.
- (x) Hard landscaping shall include, as necessary, pedestrian handrails to prevent any user or maintenance personnel falling

## 1.9 Traffic Signs, Road Markings and Studs

### 1.9.1 General

- (i) The Design, construction and completion of traffic signs, road markings and studs shall be in accordance with:
  - (a) The Traffic Signs Regulations and General Directions 2002;
  - (b) Traffic Signs Manual Chapter 1 (1982) - Introduction;
  - (c) Traffic Signs Manual Chapter 2 – Determination of x-height;
  - (d) Traffic Signs Manual Chapter 3 (2008) – Regulatory Signs;
  - (e) Traffic Signs Manual Chapter 4 (2013) – Warning Signs;
  - (f) Traffic Signs Manual Chapter 5 (2003) – Road Markings;
  - (g) Traffic Signs Manual Chapter 7 (2013) – The Design of Traffic Signs;
  - (h) Traffic Signs Manual Chapter 8 (Part 1) (2009) – Road Works and Temporary Situations – Design;
  - (i) Traffic Signs Manual Chapter 8 (Part 2) (2009) – Road Works and Temporary Situations – Operations;
  - (j) The DMRB; and
  - (k) Local transport Note 1/94.
- (ii) With particular regard to X-height the Company shall comply with the requirements of the Traffic Sign Manual Chapter 2 – Determination of X-height. When considering a reduction in X-height, the Company shall be required to gain written approval of the Contracting Authority for such a proposal, including where site space is limited or where there are special amenity considerations.
- (iii) With regard to the details for the provision of traffic signs, road markings and studs for Trunk Roads and Side Roads, the Company shall consult and comply with the requirements of:
  - (a) Transport Scotland Trunk Road and Bus Operation Directorate;
  - (b) Aberdeen City Council; and
  - (c) Aberdeenshire Council.as appropriate.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (iv) The Company shall consult and comply with the requirements of:
  - (a) Transport Scotland Trunk Road and Bus Operations Directorate;
  - (b) Aberdeen City Council; and

## Part 2 Specific Requirements

(c) Aberdeenshire Council.

as appropriate, with regard to maintaining existing sign information during construction of the New Works.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (v) The Company shall allow at least 12 weeks for the making and publication of any temporary amendments to the existing local authority traffic orders required as a part of the Design.
- (vi) The Company shall allow at least 9 months for the making and publication of any permanent amendments to the existing local authority traffic orders required as a part of the Design.
- (vii) Tourist facilities shall be signed from the Trunk Road in accordance with the Scottish Office Development Department Circular 27/1995 and the "Trunk Road and Motorway Tourist Sign Posting Policy" May 1998 published by Scottish Office Development Department.
- (viii) New traffic sign faces, poles and foundations shall be provided in the Design for all roads described in Table 1 of Schedule 19 of the Agreement.
- (ix) All permanent traffic sign faces shall be designed in accordance with BS EN 12899-1 and shall be constructed from microprismatic retroreflective material, in accordance with the requirements of BS 8408, with dew resistant coatings.
- (x) Traffic signs manufactured using a proprietary planking system shall not be permitted in the Design.
- (xi) The Design shall ensure that where traffic signs require to be illuminated as described in Column 2 of Schedule 17 of the Traffic Signs Regulations and General Directions 2002, they shall be either externally or internally illuminated, with the exception of traffic bollards which shall be internally illuminated where possible.
- (xii) All bollards and signs in the Design that shall require to be lit shall be switched via the road lighting system as described in Section 1.10 below. On Aberdeenshire Council Side Roads the luminaires shall be LED type.
- (xiii) "New Road Layout Ahead" signs shall be provided on all approaches to the New Works Site immediately prior to opening any roads to traffic as described in Table 1 of Schedule 19 of the Agreement.
- (xiv) The signs and associated posts shall be removed by the Company after six months following the issue of the appropriate Permit to Use or Third Party Road Completion Certificate, as appropriate.
- (xv) The signing Design shall include signs appropriate to cycle routes. Cycle markings shall also be required in the Design at appropriate locations on combined footway/cycle tracks.

The Company shall consult and comply with the requirements of:

- (a) Aberdeen City Council; and
- (b) Aberdeenshire Council.

as appropriate with regard to the signing and marking of cycle facilities.

## Part 2 Specific Requirements

---

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (xvi) The Design shall ensure that all signs within 50 metres of existing and/or proposed systems of road lighting shall be illuminated.
- (xvii) The Design shall ensure that chevron signing shall be provided at all roundabouts in addition to the requirements of 1.8.3 (iv).
- (xviii) The Company shall amend/replace all existing signs within and up to a distance of 100 metres beyond the New Works Site and where required as a result of comments made by the Road Safety Auditor to ensure their compliance with the new road layout, revision of the route numbers, and revision of the junction names and numbers.
- (xix) The Design shall include the provision of advance direction signing and “No Entry” signs to ensure that there is no confusion to Users between merge and diverge slip roads at junctions.
- (xx) Where the area and/or height of the sign face is such that determination of the required support size and spacing is out-with the scope of the nomograms in the Traffic Signs Manual, the support system shall be treated as a Structure with regard to its Design and to the requirement for provision of Design and Check Certificates in accordance with the Certification Procedure.
- (xxi) The power supply for illuminated traffic signs shall be procured, commissioned and provided by the Company for both Trunk Road signing and for Side Road signs.
- (xxii) Separate circuits shall be provided for the signs of Side Roads within the local authority boundaries for Side Roads and for Trunk Roads. The traffic signs Design shall ensure that power to signs and circuits are provided for signs and that any feeder pillars required are located within the relevant Scottish Ministers and local authority boundaries. The locations for the feeder pillars shall be selected to allow safe and easy access for future maintenance purposes.

The Company shall consult and comply with:

- (a) Transport Scotland
- (b) Aberdeen City Council; and
- (c) Aberdeenshire Council;

as appropriate with regard to the provision, location and lighting of traffic signs.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (xxiii) Existing signs on redundant stretches of road shall be relocated to the appropriate verge, where suitable, or replaced by new signs where required by the Design.
- (xxiv) The traffic sign Design shall ensure that all posts shall be hot-dipped galvanised as defined in BS EN 40-5 Annex A.
- (xxv) On Balmedie-Tipperty, as part of the Balmedie – Belhelvie cyclepath works, there are works required to Keir Farm Access as shown on drawing P246600/02/01/SK269 Rev B. Associated works include the provision of

## Part 2 Specific Requirements

passing bays for vehicles, and appropriate road signs and markings. The existing underpass shall be coated in an anti-graffiti paint.

- (xxvi) On the Balmedie-Tipperty section, the Mill Road Realignment shall incorporate warning signs and road markings shown on drawing P246600/02/01/SK353.
- (xxvii) A "Pedestrians in road ahead" sign to diagram 544.1 of the Traffic Signs Regulations and General Directions 2002 shall be erected at a suitable location agreed with the Contracting Authority on Milltimber Brae Overbridge road, to indicate shared use of Station Road by vehicles and pedestrians.
- (xxviii) Right turn lane shall be provided at the entrance to Kippie Lodge from the A93 including road markings to diagram 1044 of the Traffic Signs Regulations and General Directions 2002, in accordance with the Joint Statement between Transport Scotland and Aberdeen Petroleum Club in relation to the Aberdeen Western Peripheral Route dated 14<sup>th</sup> November 2008.

#### 1.9.2 Scheme Information and Publicity Sign Boards

- (i) The Company shall provide and erect scheme information boards to the detail in Appendix 1/21 to Part 4 of these New Works Requirements.

The signs and associated posts shall be removed by the Company after six months following the issue of the appropriate Permit to Use.

- (ii) The Company shall provide and display information on twelve publicity boards at locations to be agreed by the Contracting Authority, pertaining to the scope of the works and their progress.

The Company shall provide and display information on not less than twelve existing community boards at locations to be agreed by the Contracting Authority, pertaining to the scope of the works and their progress. The progress information shall be updated on a monthly basis throughout the period for the construction of the New Works.

The publicity board shall consist of a weather tight board which shall be suitable for displaying a minimum of four A3 size pages.

The publicity board shall be removed upon the Final Completion.

- (iii) The exact location for the information and publicity boards shall be agreed by the Contracting Authority, but the publicity boards shall be situated on or adjacent to existing footways or their diversions to enable the public to read them in safety.

#### 1.9.3 Traffic Bollards

- (i) Internally illuminated bollards shall be provided on the approaching corners of splitter and deflection islands to highlight their presence for traffic entering and leaving illuminated junctions.

#### 1.9.4 Marker Posts

- (i) The Company shall consult and comply with the requirements of the Transport Scotland Trunk Road and Bus Operations with regard to the exact location of the new distance marker posts and the detail of the location information to be displayed on the new distance marker posts.

Part 2 Specific Requirements

---

## 1.9.5 Road Markings

- (i) The Design shall ensure that all road markings shall be 'extruded' thermoplastic material.
- (ii) Notwithstanding the other requirements of this Agreement, where kerbs shall be provided in the Design, continuous white edge lines shall also be provided, except at Roundabouts.
- (iii) Any transitions in the offsets of white lines to be provided on the roads described in Table 1 of Schedule 19 of the Agreement and existing carriageways shall be applied at a rate of 1:100.
- (iv) On the low side of carriageways, gaps shall be provided at adequate, regular intervals in the raised rib road markings for drainage purposes.
- (v) The Design shall ensure that all Side Road markings are replaced or remarked as appropriate throughout the period stated in Clause 12.1.5 when less than 70 per cent remains due to wear, or where the luminance factor shall be less than 45 per cent, as estimated by visual inspection or measurement.  
  
Notwithstanding the above requirement, replacement of worn or otherwise defective road markings shall be carried out when the criteria set out in TD 26 of the DMRB have been determined as being met or exceeded either by visual inspection or test.
- (vi) Notwithstanding the other requirements of this Agreement, the Design shall ensure that all Side Road road markings shall be renewed during the last 12 months of the period stated in Clause 12.1.5 by remarking with sprayed thermoplastic material.

## 1.9.6 Road Studs

- (i) The Company shall consult and comply with the requirements of:
  - (a) Aberdeen City Council; and
  - (b) Aberdeenshire Council;as appropriate with regard to the provision of road studs on Side Roads.  
  
The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (ii) The Company shall consult and comply with the requirements of Transport Scotland Trunk Road and Bus Operations regarding the locations for the CHART node and section markers.  
  
The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (iii) The Company shall provide the necessary CHART link and section node markers within the New Works to enable suitably co-ordinated Integrated Road Information System (IRIS) survey information to be recorded.

## 1.9.7 Traffic Signals

## 1.9.7.1 General

- (i) Traffic signals shall be provided at the following locations:
  - (a) A90 Stonehaven Junction

## Part 2 Specific Requirements

- 
- (i) All arms of the junction between the B979, Stonehaven Junction southbound diverge slip road and Stonehaven Junction southbound merge slip road.
  - (b) A956 Charleston Junction
    - (i) All arms of the junction between the A956, Charleston Junction northbound diverge slip road and Charleston Junction northbound merge slip road.
    - (ii) All arms of the junction between the A956, Charleston Junction southbound diverge slip road and Charleston Junction southbound merge slip road.
  - (c) A93/B979 (Milltimber) Junction
    - (i) All arms of the junction between the A93 and the B979
  - (d) A944 South Kingswells Junction
    - (i) NMU crossings of the South Kingswells Junction northbound merge slip road and the South Kingswells Junction southbound diverge slip road.
  - (e) A96 / Craibstone Junction
    - (i) All arms of the junction between the Craibstone Junction Link Road, Craibstone Junction northbound diverge slip road and Craibstone Junction northbound merge slip road.
    - (ii) All arms of the junction between the Craibstone Junction Link Road, Craibstone Junction southbound diverge slip road and Craibstone Junction southbound merge slip road.
    - (iii) All arms of the junction between the A96, Craibstone Junction Link Road and Kirkhill Industrial Estate Access Road.
    - (iv) All arms of the junction between the A96, Dyce Drive and Craibstone College Access Road.
  - (f) Goval Junction
    - (i) The junction between Goval (West) Roundabout to A947 Link Road (2) and the new A947 Aberdeen to Oldmeldrum to Turriff Road.
    - (ii) The junction between the new B977 Echt to Balmeddie Road (2), the new A947 Aberdeen to Oldmeldrum to Turriff Road and the new B977 Echt to Balmeddie Road (3).
  - (g) Blackdog Junction
    - (i) NMU crossings of the Blackdog Junction northbound diverge slip road, northbound merge slip road, southbound diverge slip road and southbound merge slip road.
  - (ii) In addition to the signal installations noted above, the Company shall provide sufficient ducts to permit future installation of traffic signals at other
-

## Part 2 Specific Requirements

locations in a manner which shall not require carriageway excavation. The locations at which this provision shall be made are all junctions of trunk road main carriageway, and trunk road slip roads at which signal installations are not installed in compliance with paragraph 1.9.7.1 (i).

- (iii) The Company shall consult and comply with the requirements of
- (a) Aberdeen City Council;
  - (b) Aberdeenshire Council;
  - (c) The Scottish Ministers Trunk Road North East Management Unit;
  - (d) Transport Scotland.
- as appropriate with regards to the layout, installation and testing of:
- (a) traffic signals;
  - (b) pedestrian crossings; and
  - (c) combined pedestrian / cycle crossing installations.
- within their respective boundaries. The design requirements for traffic signals are provided in Appendix 12/5 to the Specification.
- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- (iv) The Company shall consult with the parties listed in Section 1.9.7.1 to identify the traffic signal systems currently in use and to ensure that any traffic signal and Urban Traffic Control (“UTC”) or Outstation Monitoring Unit (“OMU”) equipment to be installed shall be compatible with these existing systems.
- (v) The Company shall design, supply, install and commission all traffic signal equipment, UTC and OMU equipment and related ancillary items. All traffic signal UTC and OMU equipment supplied by the Company shall be Urban Traffic Management and Control (“UTMC”) compatible.
- (vi) The Company shall be responsible for the provision of the power supply associated with the traffic signal equipment.
- (vii) Full requirements for the design of traffic signals are detailed in Appendix 12/5 to the Specification and the design shall include, but not be limited to, the following:-
- (a) Detailed drawings at 1:500 scale for each traffic signal controlled junction, signalised pedestrian crossing and signalised pedestrian / cycle crossing;
  - (b) TR2500A Configuration Forms; and
  - (c) MOVA Datasets (as applicable).
- (viii) The design shall provide pedestrian crossings and facilities for cyclists at traffic signal installations. Controlled crossings shall be designed (without limitation) in accordance with the Transport Scotland Disability Discrimination Act Good Practice Guide for Roads (Transport Scotland). Puffin crossings and toucan crossings shall be used.
- (ix) The design of traffic signal installations shall ensure integrated operation with the existing UTC, Remote Monitoring system(s) operated by the Scottish Ministers and the relevant local authorities, where applicable,

Part 2 Specific Requirements

---

within their respective boundaries. The design shall allow the equipment to be monitored remotely. The traffic signals shall be controlled using fixed-time plans, UTC / Split Cycle Offset Optimisation Technique (“SCOOT”) or MOVA based adaptive traffic control strategies to ensure that the traffic signals operate at their optimum efficiency and can adapt to changes in traffic demand and changes in operation that may be implemented. The Company shall consult and comply with Transport Scotland and the relevant local authority in this regard.

- (x) The Company shall prepare fixed time plans, SCOOT plans, MOVA Datasets, OMU Configurations and TR2500 forms to the satisfaction of the Contracting Authority. The Company shall configure accordingly within the UTC / SCOOT database or Remote Monitoring System (“RMS”).
- (xi) The Company shall undertake on-street validation and fine-tuning of the signals / systems to the satisfaction of the Contracting Authority. The Company shall provide appropriate certification, to the satisfaction of the Contracting Authority, recording the validation measurements and parameters used in the initial system configuration.
- (xii) The Company shall be responsible for setting up all MOVA, UTC / SCOOT system databases and their configuration to the satisfaction of the Contracting Authority. This shall include but not be limited to Outstation Transmission Unit (“OTU”) data, controller data, SCOOT network data, SCOOT link data, plan data, timetable data and MOVA data. All data shall be submitted to the Contracting Authority for approval prior to being configured in the respective systems. The Company shall provide Configuration Forms to the Contracting Authority at least 9 months prior to the Company’s proposed installation date to allow adequate time for the Contracting Authority to review the UTC system information accordingly.

#### 1.9.7.2 Below Ground Traffic Signal Equipment

- (i) The Company shall supply and install proprietary traffic signal pole retention sockets. The Company’s proposed pole retention system shall be subject to the approval of the Contracting Authority. Traffic Signal Poles shall be installed in a 360 degree cast iron swivel duct foot bend retention socket. Retention sockets shall be modular in construction and shall be manufactured from ductile iron to BS2789 500-7(GGG50-Din 1693). A bottom cable entry bend shall have a rotation through 360 degrees to permit cable access from any direction.
- (ii) The Company shall be responsible for the design of the detection system and the provision of all associated below ground detection equipment. Where inductance loops are used, the Company shall supply and install Carriageway Loop Boxes (CLB’s) and the detection loop feeder ducts. These ducts shall carry the loop feeder cables from the traffic controller cabinets to the appropriate chamber at the location of the traffic detection loops provided to facilitate the operation of the traffic signals. Loop feeder cables shall not be installed by slot cutting into the carriageway.

#### 1.9.7.3 Power Supply and Termination

- (i) The Company shall be responsible for the design, supply and installation of all the equipment cabinets required for the traffic signal equipment, including any related UTC, MOVA equipment, and their associated power supplies. The Company shall also arrange for the provision of an

Part 2 Specific Requirements

---

independent power supply to the electrical termination pillars to all traffic signal equipment with the Electricity Supply Company.

- (ii) The power termination pillars shall be located adjacent to the traffic signal controller cabinet and at the back of the footway. They shall be capable of remote isolation.

#### 1.9.7.4 Communications Supply

- (i) The Company shall design, supply and install the communications system and associated cabinetry for the traffic signal equipment and MOVA, UTC equipment. The Company shall consult and comply with Transport Scotland and the relevant local authority with regard to the proposed communications solution and compatibility with the existing systems' telecommunications.
- (ii) The Company shall liaise with the relevant Service Providers as necessary with regards to the provision of communications.
- (iii) Communications cabinets, if required, shall be located adjacent to the traffic signal controller cabinet at the heel of the footway where possible.

#### 1.9.8 Duct System

1.9.8.1 All cabling shall be fully ducted and provided with inspection chambers and pole retention sockets such that cable can be installed or removed. Drawn bends shall not be incorporated in the duct runs without the prior approval of the Contracting Authority. All carriageway crossings for traffic signal cables shall incorporate 100 millimetre internal diameter ducts and shall terminate to the inspection chambers, which shall be installed within adjacent footpaths or verges.

1.9.8.2 The Company shall design, supply and install the traffic signal duct network. Traffic signal ducting shall be provided in accordance with Appendix 12/5 to the Specification.

1.9.8.3 Where inductance loops are used, this shall include the supply and installation of detection loop feeder ducts to carry loop feeder cables from the traffic controller cabinets to an appropriate chamber, sited at the location of any traffic detection loops required for the operation of the traffic signals. Loop feeder cables shall be ducted and shall not be installed by slot cutting into the carriageway. Loop feeder cables may share any traffic signal ducting provided and with agreement, communication ducting, where there is a direct and continuous route.

1.9.8.4 Where electrical mains cable is to be installed, it shall be installed in separate ducting and not share traffic signal chambers.

1.9.8.5 All completed duct routes shall be tested by drawing through an appropriate mandrel. The Company shall supply a mandrel test certificate for each duct length prior to the commencement of cable installation. Following cable installation, a replacement draw cord shall be installed so that a serviceable cord is available at all times.

#### 1.9.8.6 Duct Access Chambers

- (i) The Company shall design, supply and install duct access chambers for the traffic signal ducts, the communication ducts, the power supply ducts and the loop feeder ducts. Traffic signal ducting shall be provided in accordance with Appendix 12/5 to the Specification. These access chambers shall be the appropriate size for the number of ducts / cables and also for the depth of installation of the ducts (i.e. road crossings shall

Part 2 Specific Requirements

---

- be a minimum of 600 millimetres by 600 millimetres due to the depth of the road crossing). The Company shall consult and comply with the requirements of the Transport Scotland and where appropriate, the relevant local authority in this regard.
- (ii) The Company shall ensure provision of duct access chambers for the relevant communication Service Provider's communication ducts. The Company shall liaise with the relevant communication Service Provider to arrange the installation of such chambers.
  - (iii) The design of the Works shall include access chambers at the following general locations:
    - (a) at every change in the horizontal and vertical direction of the ducts;
    - (b) at every junction of ducts;
    - (c) at every traffic signal controller;
    - (d) at the end of each duct run; and
    - (e) at each end of each road crossing
  - (iv) The chamber spacing shall be no greater than 40 metres in any direction.
  - (v) The use of combined access chambers for the traffic signals ducts, the communication ducts, and the power supply ducts shall not be permitted. Loop feeder ducts may use communications chambers and traffic signal chambers.
  - (vi) Ducts and duct access chambers employed to accommodate cabling for traffic signals and associated works shall not be employed for any other use. For the avoidance of doubt, this shall include lighting and the like.
  - (vii) Where the design requires new ducted cables within the existing footways, the Company shall where possible use existing duct chambers. The Company shall carefully break into the chamber making the minimum size of hole necessary to install the duct. The duct shall be bedded and the interior surfaces and exterior render made good using designation one mortar.
- 1.9.8.7 Above-ground traffic and pedestrian signal equipment, detection equipment, electrical equipment and associated items, and the communications Service Provider cabinets.
- (i) The Company shall supply, install and commission all above-ground traffic signal equipment, detection equipment, electrical equipment, isolation equipment and associated items, and the communications Service Provider cabinets required by the design.
  - (ii) Above-ground traffic signal equipment shall include, but not be limited to, poles, LED signal heads, LED pedestrian heads/nearside units, LED cyclist heads/ nearside units, push button equipment, tactile cone units and audible units.
  - (iii) Traffic detection shall include, but not be limited to, above-ground detectors, VA, SA, SDE, SCOOT / MOVA loop detection and hurry-call loop detection.

Part 2 Specific Requirements

---

- (iv) Electrical equipment and associated items shall include, but not be limited to, controllers, auxillary cabinets, electrical termination pillars, traffic signal cables, power supply cabling, communications cabling, etc.
- (v) The Company shall be responsible for all traffic management associated with the traffic signal works specified in this Section 1.9.7.

**1.9.8.8 Urban Traffic Control Equipment**

- (i) The Company shall supply, install and commission all UTC equipment including outstation transmission units, control units, adaptive control detection and communications equipment and other equipment required by the design.
- (ii) The Company shall allow for the communication equipment, configuration and testing as required for the traffic signal equipment linking to existing remote monitoring or UTC systems. The Company shall provide certification, to the satisfaction of the Contracting Authority, recording completed and successful test data to ensure the in-station and outstation data compatibility. This shall include the interface with the in-station system and the communications from the outstation to in-station equipment.
- (iii) UTC equipment shall include, but not be limited to, control system outstations, communications equipment, loop / above ground detection, feeder cable, loop / above ground sensors and detectors, and specialist detection equipment.
- (iv) Adaptive control systems shall be used to maximise the efficiency of the traffic signal operation.
- (v) The Company shall consult and comply with the requirements of the Transport Scotland with regard to the specification and type of Traffic Signal Controller to be procured.

**1.9.8.9 Traffic Signal Posts**

- (i) All traffic signal posts provided on New Slip Roads and Trunk Roads, shall be passively safe in accordance with Volume 2 part 2 TA 89/08 of the DMRB.
- (ii) Traffic signal posts on Local Authority Roads shall be passively safe unless otherwise agreed with the relevant local authority as part of the consult and comply process.

**1.10 Road Lighting, Electrical Works For Road Lighting and Intelligent Lighting Control System (ILCS)****1.10.1 General**

- (i) The Company shall be required to provide a lighting and electrical design which satisfies the requirements of this Section 1.10 of the New Works Requirements and the associated Specification referenced as Part 4 of the New Works Requirements.

The road lighting and electrical works designs shall provide for the alteration of any existing road lighting and electrical works together with provision of new road lighting and electrical works.

## Part 2 Specific Requirements

The Company shall provide, install and commission lighting, electrical and ILCS systems in accordance with the design section 1.10 and the contract documents.

- (ii) The Company shall carry out an assessment of all new proposed lighting arrangements and alterations to existing lighting which shall appraise and detail the environmental, ecological, safety, reduced energy consumption and whole life cost of ownership. The preferred solution shall be based on the outcome of this appraisal. The report shall appraise and identify proposals for:

- (a) New Special Roads and New Trunk Roads; and  
 (b) Individual local authority roads including New Side Roads and New Roundabouts,

The Company shall consult and comply with:

- (a) Transport Scotland;  
 (b) Aberdeen City Council; and  
 (c) Aberdeenshire Council;

as appropriate with regard to the lighting design within the respective boundaries identified above.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- (iii) New road lighting shall be provided as follows:
- (a) at the locations detailed in Table 2 and where Reference Points are prescribed, with reference to drawings B1033200/CD/REF//001-071.
- (b) to lighting levels in accordance with BS5489-1:2013 and BS EN 13201-2 as detailed in Table 2; and
- (c) responsible authority as detailed in Table 2

**Table 2 New Road Lighting**

| Road Description                   | Lighting classes to BS 5489-1, BS5489-2 & BS EN 13201-2 | Responsible Authority <sup>1</sup> |
|------------------------------------|---------------------------------------------------------|------------------------------------|
| New Stonehaven Roundabout          | CE3                                                     | The Company                        |

Note 1 to Table 2:

TS TRBO = operated by Transport Scotland Trunk Road and Bus Operations

ACC = Aberdeen City Council operated

ASC = Aberdeenshire Council operated

The Company = The Company operated

- (iv) The Company shall interface the new lighting installation with the existing lighting and shall consult and comply with the requirements of the relevant road authorities as required to agree the level of provision of new lighting columns at and around the interface reference points.
- (v) The Company shall consult and comply with the requirements of the following bodies regarding all aspects of lighting design and approvals, including those sections of existing lighting that the Company proposes to incorporate into the New Works:
  - (a) for the Special Road and Trunk Road lighting design, Transport Scotland;
  - (b) for Side Road lighting Design:
    - (i) Aberdeen City Council; and
    - (ii) Aberdeenshire Council
 as appropriate, within their respective boundaries.
- (vi) The Company shall be responsible for the design, provision, management and installation of the permanent power supply, feeder pillars, chambers, columns and the like for all road and pedestrian lighting as well as trenching and laying of ducts.
- (vii) The Company shall liaise with the Electricity Supply Company regarding the provision of power supplies, the upgrading of existing power supplies

## Part 2 Specific Requirements

and requirements for their provision. For Trunk Roads, the electricity Supplies to roadside electrical assets and lighting shall be in accordance with LDS8006. For Side Roads, the Company shall consult and comply with the Local Authorities regarding their specific requirements.

- (viii) Road lighting and electrical works shall be in accordance with the latest DMRB TD 34, including provision of permanent power supplies at locations to be agreed in consultation with the following:
  - (a) for Special Road and Trunk Road lighting Design, Transport Scotland;
  - (b) for local authority road lighting Design:
    - (i) Aberdeen City Council; and
    - (ii) Aberdeenshire Councilas appropriate, within their respective boundaries.
- (ix) The road lighting and electrical works Design shall provide for the alteration of any existing road lighting and electrical works together with provision of new road lighting and electrical works.
- (x) The lighting Design for new lighting installations shall comply with the following criteria:
  - (a) design factors relative to the loading of lighting columns shall be applied in accordance with BSEN 40-6: 2002;
  - (b) a cleaning interval of five years shall be assumed to coincide with maintenance requirements and electrical testing (lamp replacement, etc.) for LED light sources and luminaires;
  - (c) for all lighting columns, a Terrain Category of Class one shall be applied in accordance with BSEN 40-3-1:2000; and
  - (d) luminaires shall be IP66 rated with lighting outputs in compliance with BSEN 13201-2 Table 1a, Table 2, Table 3 and Table A.1 or any specific requirements.
- (xi) Building Information Modelling (BIM) Level 2 to be incorporated as part of the design process.

#### 1.10.2 Columns, Brackets & Lanterns

- (i) Unless protected by a Vehicle Restraint System (VRS) lighting columns shall be designated Passive Safe or otherwise located so as to require no protection in accordance with the latest TD 19 of the DMRB unless agreed otherwise with the Contracting Authority. Where passively safe columns are used they shall conform to the requirements of BS EN12767 in terms of passive classification and electrical disconnection. For all new installations lighting columns, whether passively safe or not, shall be continuous taper and be manufactured from aluminium.

The column root shall be protected by an inner and outer polymer thermally bonded sheath to a height of 250mm above the finished ground level.
- (ii) Typical column mounting heights are as follows:
  - (a) 12m for Special and Trunk Roads
  - (b) 10m or 12m for Side Roads excluding residential accesses

Part 2 Specific Requirements

---

- (c) 8m for residential access type roads
- (iii) All lighting columns that are not passively safe shall be manufactured from aluminium in accordance with the requirements of BS EN 40. Where columns are designed as passively safe the columns shall be designed and constructed from aluminium in accordance with BS EN 12767.
- (iv) All columns shall have a non-hygroscopic back-board, not less than 15mm thick and of a sufficient size to accept the selected cut-out, positioned in the base compartment opposite the access door. The back-board shall be securely fixed to the inside of the column. All fixings used for the attachment of equipment and components to this back-board shall be of stainless steel.
- (v) Lighting column access doors shall be retained by stainless steel chain or braided stainless steel wire. Such retaining chain or wire shall be compatible with the column material and be held captive by fixings similarly manufactured from compatible material. Chains shall be a minimum gauge of four millimetres and be long enough to allow the column access door to be rested completely on the ground whilst removed.
- (vi) All removable access doors shall be interchangeable with access doors of similar columns without the need for adjustment.
- (vii) Lighting columns and access doors shall be permanently earth bonded, via an earth link cable of the flexible braid type, and secured to brass earthing terminals fitted on both the column and its access door. The terminations shall be distinctly and durably marked with a metal label bearing the wording "Safety Electrical Connection – Do Not Remove".
- (viii) The column cable entry slot, which shall be positioned on the face to the right of the column access door opening, shall have minimum dimensions of 150mm by 75mm with the lower edge of the slot 600mm below ground level. The cable entry slot shall be free from irregularities and burrs.
- (ix) Each column shall be fitted with an eight millimetre (minimum) diameter earth terminal complete with two plain washers, one full nut and one locking nut. These items shall be corrosion resistant and compatible with the column material. Earth terminals shall be readily accessible through the door opening and located such as to minimise the risk of injury to persons accessing them while undertaking installation and maintenance.
- (x) All verge located lighting columns shall be installed such that the door is facing away from the oncoming traffic allowing maintenance personnel to access the door while facing the traffic.
- (xi) The flush fitting weatherproof single access door shall provide protection no less than IP33 and shall be free from any irregularities, burrs or sharp edges likely to cause injury. Unless specifically required by the Agreement each column access door shall have two locks using a triangular type key. The number of column door keys which shall be supplied shall be ten per cent of the number of columns erected subject to a minimum of three keys. All column access door keys shall be manufactured from metal and be of an adequate size for physical handling.
- (xii) On completion of the installation, all door locking components shall be coated with an application of suitable corrosion inhibitor grease providing lubrication and protection from seizure and general deterioration.

Part 2 Specific Requirements

---

- (xiii) New lighting column base compartment, cableways and compartment doors shall comply with the requirements of BS 5649 part 5.
- (xiv) On Trunk Roads lighting columns shall be provided with integral bracket arms with an outreach no greater than 0.5m, except for at A90 Stonehaven Junction between reference points B10-B09 where the bracket outreach shall be no greater than 2m, lanterns to have an inclination of zero degrees and to be kept horizontal irrespective of bracket inclination, unless otherwise agreed with the Contracting Authority. All brackets shall have a five degree inclination.
- (xv) On Side Roads lighting columns shall not have bracket arms.
- (xvi) Lighting columns shall be root mounted except where mounted on structures or where the ground conditions do not allow the full column installation depth as detailed by the manufacturers data sheets to be achieved. Where root mounted columns cannot be used, the Company shall consult and comply with the Contracting Authority to develop an alternative arrangement.
- (xvii) Where columns are mounted on structures and behind parapets, the access doors shall be positioned such that the access opening is fully accessible above the upper height of the protective parapet and facing the maintenance personnel.
- (xviii) Where Flange plate columns are required they shall be set vertical on the foundation bases prepared for them. To ensure the column is set vertical compatible metal shims shall be used if required. Once the tightening of the nuts and exposed bolts has been completed to the torque level specified in the Design they shall be coated with protective paste and tape. All fixings shall be compatible with the column material.
- (xix) Where the column flange is not in accordance with BS EN 40-2 the Company shall liaise with the Contracting Authority and agree details of the flange sizes and fixing centres. The Company shall implement a design based upon the agreed flange fixing and provide the design to the column manufacturer.
- (xx) Where wall brackets and associated service boxes are installed they shall, where applicable, match existing items.

### 1.10.3 Luminaires

- (i) Unless otherwise agreed with the Contracting Authority, the Designs of the New Works shall utilise LED luminaires. The lighting design of the New Works shall have a minimum G4 Glare Classification.
- (ii) All luminaires shall be supplied with electronic LED drivers rated up to and including 52 klm and shall be suitable for operation over the input voltage range of 210-250 volts. Electronic LED drivers shall incorporate over-temperature protection and have a power factor of 0.99 or greater. Prior to delivery of any luminaire using electronic LED driver, the Company shall provide the Contracting Authority with a statement of compatibility from the supplier, detailing and confirming that the electronic LED driver being supplied is capable of operating over the temperature and voltage range to which it will be exposed in use within the luminaire housing and that the lamp and electronic LED driver are fully compatible with each other.

Part 2 Specific Requirements

---

- (iii) All combinations of luminaires, lamps and electronic LED drivers , shall be included in Elexon's list of approved equipment and be allocated a valid Unmetered Supplies ("UMS") charge code and should be CE marked.
- (iv) LED lanterns to be provided with a manufacturer backed long term guarantee of at least 20 years that will be transferred by novation to the relevant road authority on transfer of maintenance responsibility for the lanterns concerned. Such guarantee shall be based on a free issue replacement luminaires by the manufacturer based on L80, F10 of 80,000 hours.
- (v) All luminaires shall be supplied as compatible with the relevant road authority's Intelligent Lighting Control System ("ILCS") without impact upon either the luminaire or ILCS manufacturer's guarantee.
- (vi) All new luminaires shall have an Ingress Protection rating of no less than IP 66 for the Electronic LED driver and lamp compartments. All luminaire glazing shall be manufactured from Toughened Glass.
- (vii) Lamp to be typically Light Emitting Diode (LED) for all luminaires including illuminated signs and bollards. LED colour temperature to be no greater than 4000K.
- (viii) All LED type luminaires shall be installed such that they are horizontal;
- (ix) Non-Motorised User (NMU) underpass lighting control to be angled so that it does not detect small mammals entering the underpass.

## 1.10.4 Feeder Pillars

- (i) Dedicated separate feeder pillars shall be provided for the lighting of roads operated and maintained by The Company, roads operated and maintained by Aberdeen City Council, roads operated and maintained by Aberdeenshire Council and roads operated and maintained by Transport Scotland TRBO.
- (ii) The feeder pillars and circuits for lighting installations shall be located within the boundaries of the relevant authority.
- (iii) The locations of the feeder pillars shall allow safe and easy access for future maintenance. A person access hard standing area shall be allowed for in front of the feeder pillar to facilitate ease of maintenance.
- (iv) The feeder pillars shall have a 'typical' cabinet specification as defined in Specification referenced as Part 4 of the New Works Requirements. The Company shall consult and comply with the relevant road authority to develop the feeder pillar arrangement.
- (v) The Company shall arrange for all Distribution Network Operator (DNO) electrical supply connection works to be undertaken. Where the Company needs to organise a new / transfer of an existing DNO connection then the individual metering requirements are to be clarified in advance of the ordering of works.
- (vi) The Company shall consult and comply with all requirements of the relevant road authority in terms of the equipment to be installed and construction methods utilised in advance of undertaking their detailed design selection and extents evaluation and ensure that their design and supporting documentation and calculations meet with the requirements of the relevant road authority. Following completion of the Works, Operating

## Part 2 Specific Requirements

and Maintenance documents including as-built drawings, compliance test records and electrical tests and completions certificates shall be forwarded to the relevant road authority prior to the road lighting and associated electrical Works being accepted.

- (vii) Should distribution equipment within a feeder pillar be made live prior to the lighting installation being made live, a suitable 'Permit to Work' system shall be put in place to ensure that all recommended safety precautions are adhered to and hazards identified.
- (viii) Single phase supplies shall be utilised unless otherwise agreed in writing with the relevant road authority. Where a three phase supply to feeder pillars has been provided by the DNO, the individual outgoing distribution circuits via the electrical switchgear shall be single phase.
- (ix) All electrical works for new installations shall comply with IET Wiring Regulations 17th Edition: BS 7671:2008 Incorporating all amendments and updates, and the Electricity at Work Regulations 1989.
- (x) The electrical installation shall be tested in accordance with IET Wiring Regulations 17th Edition: BS 7671:2008 Incorporating all amendments and updates, and copies of the completed certificates shall be forwarded to the relevant road authority within seven working days of the tests being undertaken.

## 1.10.5 Wiring

- (i) All new road lighting installations shall be wired in XLPE or MDPE / PVC / SWA / PVC cables. The size of cable shall be either 16mm sq.3 core or 25mm sq. 3 core.
- (ii) All new traffic signs and bollard installations shall be wired in XLPE or MDPE / PVC / SWA / PVC cables. The minimum size of cable shall be 10mm sq.3 core.
- (iii) Longitudinal distribution (from feeder pillar to feeder pillar connections) cables shall be a minimum core size of 25mm<sup>2</sup>.
- (iv) The cable shall have BASEC or HAR approval in all respects other than the oversheath colour which shall be purple for all parties.
- (v) The electrical supply to the luminaire shall be via a 2.5mm sq. 3 core Blue Arctic Grade flexible cable.
- (vi) Cables shall not be subjected to an internal bending radius of less than 12 times the external diameter of the cable or less than the radius recommended by the manufacturer, whichever is greater.
- (vii) All cable sheathing shall be Chlorine Free.

## 1.10.6 Earthing

- (i) An earth rod shall be installed at each control pillar, complete with rod, inspection pit and cover. The connection between the earth rod and the pillar shall be made with an earth cable of no less than 16 mm<sup>2</sup> in diameter with resistance to ground of 20 ohms or less.
- (ii) An earth rod shall be connected to the last or penultimate column for each circuit.

Part 2 Specific Requirements

---

- (iii) The designer shall fully address issues in relation to the risks associated with simultaneous touch of adjacent conductive parts which are fed from different supplies throughout a distributed electrical installation. Supplementary bonding shall be in accordance with BS7671: 2008 including updates Regulation 542.1.3.3.

## 1.10.7 Ducting and Cabling

- (i) All new road lighting cabling for supply to lighting columns shall be installed in not less than two purple UPVC walled high density polypropylene with smooth bore of 100 millimetres internal diameter to BS EN 50086-2-4 on Local Authority roads and 150mm diameter millimetres to BS EN 50086-2-4 on the Trunk Road network. All ducts will be imprinted with the words "STREET LIGHTING" at intervals of not more than one metre throughout their length.
- (ii) The ducting shall be laid in such a manner to:
  - (a) Prevent the cable from being subjected to the bending radius described in C.1.10.5(iv).
  - (b) Prevent the duct alignment, where it differs from the trench, from exceeding a 1:30 transition from the vertical or horizontal.
- (iii) All new road crossings for lighting cables shall consist of not less than four UPVC walled high density polypropylene ducts. The ducts shall have a minimum cover of 750mm and shall be protected by a concrete surround of mix ST2 concrete to BS8500-2. All ducts shall be smooth bore, 100mm internal diameter on the local authority roads and 150mm diameter on the Trunk Road network to BS EN 50086-2-4 to facilitate the crossing of the carriageway. The purple ducts shall be imprinted with the words "STREET LIGHTING" at intervals of not more than one metre throughout their length.
- (iv) Cable ducts in the verge or central reserve shall consist of not less than two ducts and shall be HDPE with smooth bore of 100 millimetre internal diameter to BS EN 50086-2-4 on Local Authority and 150mm diameter to BS EN 50086-2-4 on Trunk Roads, purple in colour and imprinted with the words "STREET LIGHTING" at intervals of not more than one metre throughout their length. A minimum cover of 650 millimetres shall be provided.
- (v) Metallic trace marker tape shall be laid above the duct to permit cable detection by electronic route tracing equipment. This shall be yellow, self-coloured polyethylene tape for cable marking shall be laid approximately 250 mm above any duct carrying electrical supply/distribution cable. The tape shall be not less than 0.1 mm thick and 150 mm wide with the wording "Street Lighting Cables Below" printed in black along the full length so as to occupy not less than 75% of its available length and occurring at least at 1m intervals. Where several street lighting ducts are laid in one trench, only one line of marker tape need to be installed.
- (vi) Ducts shall be impervious to water, capable of being laid in temperature down to -10 degrees Celsius and be sufficiently flexible to follow undulation in a trench bottom.
- (vii) At least 75mm clearance shall be given between the cable duct and the sides of the trench and between ducts sharing the same trench.

## Part 2 Specific Requirements

- (viii) Unless agreed otherwise with the Contracting Authority, at least 500mm clearance shall be given between cable ducts and services pipes belonging to Statutory Undertakers. The Company shall consult and comply with the relevant road authorities regarding their specific requirements.
- (ix) Trenches in verges and trenches crossing below the carriageways shall be 600mm wide and not more than 1.5m deep for the laying of ducts.
- (x) All ducting shall be Chlorine Free polyethylene.
- (xi) 1000mm by 1000mm distribution chambers shall be used at Special Road and Trunk Road crossings with a distribution chamber located in each verge with a minimum of four ducts 150mm minimum internal diameter ducts running between chambers. Chambers shall be covered with extra heavy duty covers.
- (xii) 450mm by 450mm distribution chambers shall be used at non-Special Road and non-Trunk Road crossings with a distribution chamber located in each verge with a minimum of four 100mm minimum internal diameter ducts running between chambers. Chambers shall be covered with heavy duty covers.
- (xiii) The location of all distribution chambers and ducts shall be recorded on as-built drawings with an accuracy of +/-100mm. Location measurements shall be taken from the nearest edge of the carriageway or fence line. Offsets of ducts shall be recorded at 20m intervals along their line. Offsets shall be defined longitudinally by distance from a permanent highway feature i.e. a marker post or other suitable feature. The Company shall record and store in a format compatible with Transport Scotland's Asset Management System (IRIS).
- (xiv) Under no circumstances shall cables enter a column, post, bollard or pillar base without the protection of ducting. Such ducts shall continue into the base and terminate at a suitable height to allow a seal to be formed using expanding foam sealant or similar.

## 1.10.8 Illuminated Signs and Bollards

- (i) The lighting design of the New Works shall include for the energising and illumination of relevant illuminated signs and bollards.
- (ii) All new lit bollards shall be internally illuminated by LEDs with a cast aluminium base lit arrangement and a minimum Ingress Protection rating of IP67, in accordance with BS EN 12899.
- (iii) All bollard external fastenings shall be manufactured from stainless steel.
- (iv) Signing within 50m of a lighting column that requires to be illuminated shall have a mean luminance in accordance with the requirements of BS EN 12899. Illuminated Traffic Sign luminaires shall use LED type lanterns complete with associated electronic LED drivers.
- (v) All signs and bollards that require to be illuminated shall be switched via the Intelligent Lighting Control System (ILCS).

## 1.10.9 Cut-outs

- (i) All street lighting and sign column cut-outs shall comply with BS7654.

Part 2 Specific Requirements

---

- (ii) All single phase road lighting cut-outs shall be double-pole ensuring both phase and neutral are broken by the removal of the fuse carrier. An earth terminal shall be provided within the cut-out enclosure. The continuity of the earth path shall not be broken by the removal of the cut-out fuse carrier.
- (iii) The cut-out gland plates shall be an integral part of the cut-out and be capable of terminating XLPE or MDPE / PVC / SWA / PVC cables up to 25 mm<sup>2</sup> and have the capacity for looping in-out. The brass gland plate shall typically accommodate up to three cables. Additional armoured cable termination, cut-out capacity and isolation devices shall be provided at multi-headed columns and at locations where spur supplies are provided.

## 1.10.10 Joints

- (i) All electrical and similar joints made onto the column structural aluminium and column access door shall be such as to eliminate or protect against corrosion resulting from contact between dissimilar metals. The Company shall adhere to such aspects of the guidance provided in PD6484 as it relates to dissimilar metals in contact with aluminium. The selection of electrical earthing components shall also comply in this and other respects with the requirements of BS 7430.
- (ii) Underground cable joints shall not be permitted for cables supplying road lighting. Lighting installations shall be designed to employ a loop in - out arrangement without joints. The Company shall repair damaged cables by replacing the full length of the damaged cable.

## 1.10.11 Labelling

- (i) In compliance with the DMRB, Transport Scotland operates a lighting inventory system. For newly installed equipment the Company shall provide all information in an agreed electronic format, in accordance with the table of attributes contained within Transport Scotland Trunk Road Inspection and Inventory Manuals as required to correctly populate the inventory system. Identification labels shall be attached to all pillars, columns, signs and similar electrically energised roadside assets. For Trunk Roads, the identification labels shall be in accordance with document LDS 8001. For Special Roads the identification labels shall be vinyl, 45mm x 60mm, black on white, with a 50mm letter/number, the font is Swiss 721 BT (bold) and these labels shall be affixed facing the road at 2.5m. The numbering schedule will be provided based on "as built". The numbering used on such labels shall identify the assets in the inventory and similar collected information. The Company shall consult and comply with Transport Scotland regarding the agreed format for the collected information. The Company shall consult and comply with the Local Authorities regarding their labelling requirements.

## 1.10.12 Temporary Lighting

- (i) Temporary lighting may be required at any part of the New Works Site where works shall be undertaken. All temporary lighting shall be provided in accordance with the applicable standards. The installation of temporary lighting shall comply with the relevant Acts and Regulations – for example (without limitation), the Electricity at Work Regulations 1989 and IET Wiring Regulations 17th Edition: BS 7671:2008 incorporating amendments and

Part 2 Specific Requirements

---

updates. It shall not form a hazard to Users. No existing street lighting shall be disconnected until it has been replaced by either the new permanent lighting arrangement or a temporary lighting system provided to the satisfaction of the Contracting Authority. The temporary lighting shall remain operational until the new permanent lighting arrangement is brought into use. Temporary lighting arrangements shall require the approval of the Contracting Authority prior to the commencement of works in the affected area.

## 1.10.13 Lighting Design Documents

- (i) A non-exhaustive list of relevant design documents in respect of the Works includes:
- (a) Electricity at Work Regulations 1989;
  - (b) Electricity Safety, Quality and Continuity Regulations 2002 (amended 2006,2009);
  - (c) Waste Electronic and Electrical Equipment (amendment) Regulations 2006;
  - (d) Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment Regulations 2008;
  - (e) IET Wiring Regulations 17th Edition: BS 7671:2008 incorporating amendments and updates (f) BS 7430: Code of practice for earthing;
  - (f) BS 7430: Code of practice for earthing
  - (g) BS EN 50110 Part one & 2: Operation of Electrical Installations;
  - (h) HSE Publication HSR25: Memorandum of Guidance on the Electricity at Work Regulations 1989;

## 1.10.14 Intelligent Lighting Control System (ILCS)

- (i) The Company shall procure, install and commission three number of separate Intelligent Lighting Control Systems ("ILCS") infrastructure for Transport Scotland, Aberdeenshire Council and Aberdeen City Council, which shall provide intelligent lighting control and monitoring capability. These shall allow for operation of road lighting in a manner consistent with Transport Scotland's guidance documentation on relevant roads, including operation of road lighting by the Company on O&M Roads  

All road lighting assets including illuminated signs and bollards supplied, installed, modified or amended which are part of the works undertaken under this contract shall be controlled and monitored by the ILCS systems.
- (ii) The Company shall consult and comply with the relevant road authorities regarding the procurement of the ILCS to ensure compatibility with any ILCS operating outside of the scheme extents, and to align with the three authorities' existing operating practices, policies and future aspirations.
- (iii) The Company shall agree the operational regimes and lighting levels to be applied through the ILCS with the relevant road authority, taking cognisance of the obligations to operate effectively and efficiently the illuminated assets on the Trunk Road Network including the Contracting Authority's reduction targets regarding carbon dioxide emissions.
- (iv) The ILCS used to control Transport Scotland's road lighting consists of several components. Such ILCS components located at the roadside shall be illuminated assets mounted to provide a reasonable level of protection against tampering and vandalism. The ILCS nominally consists of the following components:
  - (a) LED drivers or ballasts compatible with the ILCS. The LED drivers or ballasts shall be of electronic type. Communications between the LED driver or ballast and the lantern communications module (LCM) shall be in accordance with an accepted industry standard;
  - (b) Illuminated asset mounted LCM shall communicate wirelessly with the lantern group communications module (LGCM), and shall be directly powered from the LED driver/ballast;
  - (c) Illuminated asset mounted LGCM shall communicate wirelessly with both the LCM and the ILCS host server, and shall be directly powered from the LED driver/ballast;

Part 2 Specific Requirements

---

- (i) The wireless communications between the LGCM and the ILCS central host server shall utilise the UK mobile phone network;
  - (ii) The Company shall be responsible for all aspects of setting up and maintaining, and all on-going costs of the communications network to support the ILCS;
  - (iii) The LGCM shall incorporate an ambient light monitoring to provide resilience in the form of dusk to dawn switching, in the event of loss of communications between the roadside ILCS equipment and the ILCS host server.
- (d) An ILCS hardware hosted server shall be dedicated to Transport Scotland's ILCS, which shall be maintained and located as part of the Company's agreement with the ILCS supplier.
- (e) Access to the ILCS host server shall be through a web based portal, accessible using industry standard software. The Company shall be responsible for any costs associated with the provision of this web based access including ILCS hosting costs.
- (v) The ILCS used to control road lighting on Trunk Roads shall as a minimum be capable of:
  - (a) dimming, trimming, variable lighting, monitoring and remotely switching the road lighting;
  - (b) remote defect monitoring and reporting on the road lighting assets;
  - (c) maintaining the appropriate lighting levels in the event of a loss of communications between any of the component parts of the ILCS;
  - (d) predictive lamp life monitoring; and
  - (e) operate appropriate lamp maintenance factoring.
- (vi) The ILCS used to control road lighting on Trunk Roads shall have the following functionalities and features:
  - (a) TALQ Compliant;
  - (b) all ILCS components shall be capable of self-identification back to the ILCS host server;
  - (c) incorporate custom definable reporting functionality;
  - (d) full open protocol;
  - (e) 1% resolution for variable lighting changes;
  - (f) all ILCS components shall have appropriate technical and mechanical interface compatibility and approvals with all major luminaire manufacturers;
  - (g) ILCS shall incorporate Hyper Text Transfer Protocol Secure (HTTPS) link security.
  - (h) ILCS shall be Elexon approved;
  - (i) all ILCS components shall be CE approved;

Part 2 Specific Requirements

---

- (j) all ILCS components shall be designed to the relevant industry standards for compatibility with their operating environment;
  - (k) LGCM to be lantern mounted, and
  - (l) all ILCS components shall be mechanically and electrically robust and resilient.
- (vii) The user interface of the ILCS used to control road lighting on Trunk Roads shall typically provide the following functionalities and features:
- (a) precise control of variable lighting levels;
  - (b) switching and dimming event library;
  - (c) energy saving by fine tuning burning hours ('trimming');
  - (d) switching for local circumstances and events;
  - (e) issuing an override of any of the pre-programmed or automated functions;
  - (f) monitoring the operation and performance of street lighting and sign lighting lanterns;
  - (g) capable of being set to generate alarms when pre-set remotely configured monitoring threshold conditions are met; and
  - (h) web portal user interface.
- (viii) The Company procured ILCS used to control road lighting on Trunk Roads shall be future proofed to a reasonable extent by ensuring full compatibility and interoperability with at least one other readily available ILCS from another system.
- (ix) The Company shall consult and comply with Transport Scotland in respect of suitable provision of access to the ILCS host server by Transport Scotland.
- (x) The Company shall consult and comply with Aberdeen City Council and Aberdeenshire Council in respect of the degree of integration and operability of their ILCS with their respective asset management systems. The company shall be responsible for all costs and associated development work required to integrate their ILCS with Aberdeen City Council and Aberdeenshire Council's asset management systems.
- (xi) The ILCS used to control road lighting on Trunk Roads shall be integrated with other Transport Scotland systems, as a minimum these are:
- (a) Integration with the Transport Scotland's asset management system, which is currently Integrated Road Information System (IRIS) supplied by WDM and operated by Transport Scotland. The Company shall consult and comply with Transport Scotland to fully ascertain the functionality expected from the integration, but shall as a minimum include:
    - (i) automatic synchronisation at least twice daily of the inventories held in both the ILCS and IRIS systems;
    - (ii) automatic status synchronisation at least twice daily of the following attributes:-
      1. lamp failure,

Part 2 Specific Requirements

---

2. predictive lamp failure (for High Intensity Discharge (HID) lamps ),
  3. lamp condition (for HID lamps),
  4. lamp cycling (for HID lamps),
  5. day burning lamps,
  6. lamp switching times,
  7. lamp burning hours,
  8. ballast or driver faults/failures,
  9. individual lantern lamp burning hours,
  10. energy consumption, total and individual luminaire consumption,
  11. full system diagnostics, and
  12. communication failures;
- (iii) the Company shall be responsible for all associated development work required to integrate the ILCS with Transport Scotland's asset management system. Such integration shall include liaison with Transport Scotland's asset management system provider as required, and the responsibility for all associated costs to fully develop, deploy, and commission full functionality. This integration may include software developments of both the ILCS and Transport Scotland's asset management system. The Company shall consult and comply with Transport Scotland in relation to development and integration of this functionality;
- (iv) interface links between the ILCS and IRIS shall be to an agreed security level. The Company shall agree and implement through dialogue with Transport Scotland's asset management system provider (WDM) the required security protocols;
- (v) IRIS to provide Transport Scotland with energy management, inventory and asset performance services.
- b) Integration with the Traffic Scotland system, which is used to manage Intelligent Transport Systems infrastructure across the Trunk Road Network. Part of the Traffic Scotland system is remote dynamic lighting control system (RDLCS) which, based upon the Highways Agency Motorway Road Lighting Control System (MoRLiCS), uses traffic data to vary lighting levels across the Trunk Road Network. Such integration shall include liaison with the Traffic Scotland providers as required, and the responsibility for all associated costs

## Part 2 Specific Requirements

to fully develop, deploy and commission full functionality. The Company shall consult and comply with Transport Scotland in relation to the development and integration of this functionality.

- (i) Interface links between the ILCS and the Traffic Scotland system must be to an agreed security level. The Company shall agree and implement through dialogue with the Transport Scotland's Traffic Scotland system provider the required security protocols.
- c) RDLCs is subject to Transport Scotland's operational strategy and the associated responsibilities as required.

#### 1.10.15 Transport Scotland Supplementary Guidance Documents

The Company shall take cognisance of the following Transport Scotland guidance documents in their design and provision of road lighting and electrical Works.

- (i) LDS8001 07 – Roadside Electrical Assets and Lighting Identification System;
- (ii) LDS8004 09 – Roadside Electrical Assets and Lighting Health & Safety File Requirements with Model Forms;
- (iii) LDS8005 09 – Electrical Inspection and Testing of Lighting and Associated Electrical Assets and Installations with Model Forms;
- (iv) LDS8006 09 – Electricity Supplies to Roadside Electrical Assets and Lighting;
- (v) LDS8009 09 – Electrical Inspection and Testing of Lighting and Associated Electrical Assets and Installations with Model Forms
- (vi) LDS8013 09 – Guidance on making Roadside Electrical Assets obsolete, redundant or derelict;
- (vii) LDS8014 09 – Competency Requirements Relating to Work on Transport Scotland's Roadside Electrical Assets and Lighting;
- (viii) LDS8017 09 – Special Requirements for Local Authority Roadside Electrical Assets;
- (ix) LDS8018 09 – Guidance on Sustainability in Relation to Roadside Electrical Assets and Lighting;
- (x) LDS8023 09 – Electrical Maintenance Guidelines;
- (xi) LDS8025 09 – Typical Drawings for Roadside Electrical Assets.

## 1.11 Weather Stations and Historical Weather Reference Locations

### 1.11.1 Scope of Works

- (i) The Company shall be responsible for the overall design, supply, procurement, delivery, infrastructure, installation, testing, commissioning, liaison, and the works and services required for the operation of Weather Stations. The Company shall submit for the Contracting Authority's written acceptance design proposals including drawings indicating the exact

**Part 2 Specific Requirements**

---

physical positions of the individual Weather Stations, prior to undertaking any site works associated with these facilities.

- (ii) The Company shall co-locate the facilities with ITS roadside infrastructure where possible.

#### 1.11.2 Locations and Type of Weather Stations

- (i) The Company shall provide six Weather Stations, each comprising sets of meteorological sensors with their respective outstations, at the locations as detailed in Table 3.

## Part 2 Specific Requirements

Table 3 – Weather Station Locations

| Weather Station | Location                       | Chainage                  |
|-----------------|--------------------------------|---------------------------|
| <b>MET1</b>     | Fastlink                       | To Be Agreed with TS TRBO |
| <b>MET2</b>     | Cleanhill to Charleston        | To Be Agreed with TS TRBO |
| <b>MET3</b>     | Cleanhill to South Kingswells  | To Be Agreed with TS TRBO |
| <b>MET4</b>     | South Kingswells to Craibstone | To Be Agreed with TS TRBO |
| <b>MET5</b>     | Craibstone to Blackdog         | To Be Agreed with TS TRBO |
| <b>MET6</b>     | Balmedie-Tipperty              | To Be Agreed with TS TRBO |

- (ii) The Company shall provide at each of the Weather Station locations the following provisions:
- (a) one pair of infra-red (IR) cameras;
  - (b) sensor to measure road surface temperature;
  - (c) sensor to measure temperature at 300 millimetres below the road surface;
  - (d) sensor to measure air temperature;
  - (e) sensor to measure relative humidity / dew point temperature;
  - (f) sensor to measure precipitation;
  - (g) sensor to measure road surface states: dry, wet, moist, ice, frost, snow, and slushy;
  - (h) sensor to measure water layer thickness from 10 microns to two millimetres;
  - (i) sensor to measure ice layer thickness from 10 microns to two millimetres;
  - (j) sensor to measure frost / snow layer thickness from 10 microns to two millimetres;
  - (k) GPRS modem or equivalent at instation and outstation with connection to PSTN;
  - (l) multi-channel data logger;
  - (m) outstation with respective cabinet / enclosure; and
  - (n) the required supporting provisions including but not be limited to the infrastructure and mounting supports for the installation of meteorological measuring facilities, wiring, power supply, maintenance facilities, and data communications facilities.
- (iii) The meteorological measurement facilities provided shall be rated to operate continuously in the climate typically experienced at their respective locations throughout the year.

Part 2 Specific Requirements

---

- (iv) The Company shall provide a hard landscaping for each facility in according with Schedule 2, Part 4 Section 1g Hard Landscaping Requirements for Traffic Scotland.

## 1.11.3 Infra-Red (IR) Camera Requirements

- (i) A camera mounting pole with cross-arm at the top for mounting of the two IR cameras shall be provided at each of the meteorological measurement locations. The cameras shall be mounted on the cross-arm at a minimum height of 3 metres above the carriageway. The design of the mounting pole shall allow servicing and maintenance to be done without the need for high level access. The Company shall take cognisance of the obstruction free space required by the pole in its folded down position.
- (ii) The IR camera shall be able to automatically switch to day mode, generating colour images without distortion in day time. The camera shall also automatically switch to night mode, turning on the infrared illuminator to generate infrared images during the night time and in poor ambient light conditions. Images shall be generated at frequency of one or more every ten minutes.
- (iii) The camera images shall have the following information stamped along their top edge:
  - (a) date / time (local e.g.: British Summer Time / Greenwich Mean Time);
  - (b) site name and road number; and
  - (c) the direction being viewed (e.g. view from north).The information shall be in text format and shall be legible in colour images during day time or in monochrome images when ambient light is poor.
- (iv) The format and communication protocol of the camera shall conform to open or public domain standards including the Department for Transport developed TR2020 protocol, where applicable, allowing them to be interfaced, read, edited, archived off-line, and presented on internet web page.

## 1.11.4 Data Logging and Communication Requirements

- (i) At each of the Weather Stations the Company shall provide multi-channel data loggers to capture all measurement outputs from the meteorological sensors and BT telephone socket complete with detectable telephone signal.
- (ii) The data loggers shall be weather and water / moisture resistant able to operate continuously under the climate normally experienced in a roadside cabinet in Scotland throughout the year.
- (iii) Data stored in the data loggers shall be retained for a minimum of 120 hours in the event of external power failure.
- (iv) The channel range and resolution of data loggers shall match or exceed the accuracy of meteorological sensors.
- (v) To allow data transmission and configuration, the data logger shall have built-in electronic interface and communication ports conforming to one or more of the following standards: USB, RS-232, and ethernet.

Part 2 Specific Requirements

---

- (vi) The data loggers shall also be provided with full version of application software enabling system set up, calibration, diagnostics, data management functions such as sensor scan rate, scaling, log interval and data output format.
- (vii) The format and communication protocol of the data logger shall conform to open or public domain standards including the Department for Transport developed TR2020 protocol, where applicable, allowing them to be interfaced, read, edited, archived off-line, and presented on internet web page.

## 1.11.5 Roadside Cabinet Requirements

- (i) The Company shall provide a roadside cabinet at each of the Weather Station locations. The Company shall provide complete infrastructure required by the roadside cabinet including but not be limited to the following:
  - (a) cable containment system;
  - (b) cable chambers;
  - (c) power supply;
  - (d) civil structure openings;
  - (e) cabinet plinth; and
  - (f) other provisions or structure required to complete the works.
- (ii) The roadside cabinet provided shall meet IP65 against ingress of water and dust. The roadside cabinet shall be sized and fitted to house data logger, data communication equipment, BT telephone socket, provisions required for the functioning of meteorological sensors, power supply, and a 13 amp maintenance power socket.
- (iii) The Company shall consult and comply with the Contracting Authority regarding the lock-and-key set, labelling of the equipment, and labelling of the exterior surface of the roadside cabinet.
- (iv) The roadside cabinet shall be made of sheet steel and shall be hot dip galvanized to BS 1461 and treated and painted to RAL number 7015.

## 1.11.6 Historical Weather References

- (i) The Company may acquire historical weather information via the Met Office web site: [www.metoffice.gov.uk](http://www.metoffice.gov.uk).

**This page is blank**

## 2 Structures General Requirements

### 2.1 General

- 2.1.1 The Design of all Structures shall, as a minimum, be in accordance with the requirements of Eurocodes, the DMRB and Transport Scotland Interim Amendments.
- 2.1.2 All Structures shall undergo a Category 3 design check as defined by BD2 Technical Approval of Highway Structures. The design checking of all Structures shall be in accordance with the requirements of Eurocodes, the DMRB and Transport Scotland Interim Amendments.
- 2.1.3 For the purposes of these New Works Requirements, in addition to Structures listed in Appendix H, culvert headwalls, mammal underpasses, pier protection, closed circuit television (“**CCTV**”) supports and variable message sign (“**VMS**”) substructures and superstructures shall be regarded as Structures. The use of steel support plinths for MS3 VMS, and MS4 VMS shall not be permitted.
- 2.1.4 In addition to the requirements of Section 2.1.1 the design of the New Works for all Structures over or adjacent to railway lines shall be in accordance with the relevant European and National standards, statutory and Health and Safety Executive (“**HSE**”) / Office of Rail Regulation (“**ORR**”) requirements, and the relevant Network Rail Group and Line Standards. The Company shall consult and comply with the requirements of Network Rail and / or any other relevant railway Statutory Undertaker or owner / operator.
- 2.1.5 The Company shall ensure that the design of the New Works shall comply with the requirements of Network Rail and / or any other relevant railway undertaker or owner / operator. It is envisaged that construction and / or modification of all Structures over railway lines will be undertaken using ‘Rules of the Route’ possessions for Network Rail lines or other agreed possessions for lines owned / operated by others. The Contracting Authority understands (without guarantee or warranty) that it is the policy of Network Rail to allow disruptive possessions only when it has been demonstrated that the work cannot be completed using non-disruptive possessions. No disruptive possessions have been pre-booked.
- 2.1.6 The Company shall consult and comply with the requirements of the Scottish Environment Protection Agency (SEPA) with regard to the design, execution, completion and maintenance of all Structures adjacent to watercourses. The Company shall provide the Contracting Authority with the completed Consultation Certificate, in accordance with Section 8 of PART 5 of these New Works Requirements.
- 2.1.7 The Company shall consult and comply with the requirements of Statutory Undertakers and owners of Private Apparatus including, but not limited to:
- (i) Scottish Water;
  - (ii) Scottish and Southern Energy Transmission
  - (iii) Scottish and Southern Energy Distribution;
  - (iv) Scotland Gas Networks;
  - (v) BT;

**Part 2 Specific Requirements**

---

- (vi) Trafficmaster;
- (vii) Cable and Wireless;
- (viii) BP; and
- (ix) Shell.

in relation to the design for the layout and location of apparatus, over, through and adjacent to Structures and the method of access to such apparatus. The Company shall provide the Contracting Authority with the completed Consultation Certificate in accordance with Section 8 of PART 5 of these New Works Requirements.

**2.2 Location and Description of Structures**

- 2.2.1 The approximate locations and brief descriptions of the principal Structures in the design of the New Works shall be as described in Appendix H.
- 2.2.2 The Additional Requirements for Particular Structures are set out in Section 3 of this Schedule 2 Part 2.
- 2.2.3 In the event that an alternative arrangement is proposed for any Structure, which is considered by the Contracting Authority at their sole discretion to be otherwise compliant with the requirements of the Agreement and to provide a similar or better level of performance, then the alternative arrangement may be considered acceptable by the Contracting Authority. The Company shall be required to consult and comply with the requirements of the Contracting Authority in respect of appropriate alternative design and other parameters for such an alternative arrangement.

**2.3 Design Loading**

- 2.3.1 The design loading for all Structures shall be as described in Appendix H.

**2.4 Design Headroom**

- 2.4.1 The design of Structures shall provide the minimum headroom stated in Appendix H as defined in Table 6-1 of TD27 in the DMRB.

**2.5 Road Cross Section at Structures**

- 2.5.1 Carriageway and verge widths at Structures shall be as described in Appendix H.

**2.6 Parapets and Environmental Barriers**

- 2.6.1 All parapets and other road restraint systems on Structures including vehicle parapets, pedestrian parapets and pedestrian protection at headwalls, wingwalls and retaining walls shall be in accordance with Series 400 of the Specification, BS EN 1317 and TD 19 of the DMRB, as described by Transport Scotland Interim Amendment No. 39 (TS IA 39).
- 2.6.2 Vehicle parapets shall be compatible with the vehicle restraint systems to which they are, or shall be, connected in accordance with Schedule 2 Part 2 of this Agreement.

## Part 2 Specific Requirements

- 
- 2.6.3 New vehicle parapets shall extend at least two panels or six metres, whichever is the greater, beyond the top of the slope intersecting line.
- 2.6.4 Unless otherwise stated, steel parapets shall be unpainted and galvanised with a minimum coating finish of 100 microns. If painting of steel parapets is required, prior to painting they shall receive appropriate treatment to aid paint adhesion as stated in the Specification, Table 19/1. The colour of the paint protection system shall be BS 18B17.
- 2.6.5 Unless otherwise stated, vehicle containment parapets and pedestrian parapets of aluminium, concrete or combined metal and concrete construction shall not be permitted on Structures.
- 2.6.6 Where stainless steel parapets or handrails are required, these should be designed to be vandal and theft proof to the satisfaction of the Contracting Authority.
- 2.6.7 Environmental barriers, including noise barriers, and lighting columns, shall be mounted outwith the working width of parapets. Steel brackets shall not be permitted and concrete blisters will only be permitted to support lighting columns.
- 2.6.8 Parapets on all Structures over the AWPR/B-T shall have mesh infilling which shall have apertures with a perimeter not exceeding 175 mm and with no opening dimension greater than 50mm.

## 2.7 Structural Form

- 2.7.1 New Structures shall be such that a consistency of materials and finishes shall be achieved throughout the New Works, giving the appearance of a 'family' of Structures.
- 2.7.2 Unless otherwise permitted in Section 3, bridges shall have a constant superstructure thickness.
- 2.7.3 For the purposes of the design of the New Works, half height abutments shall be abutments where the exposed height of the front face of the abutment is half of the vertical distance between the back of verge level and the bridge deck soffit.
- 2.7.4 For the purposes of the design of the New Works, three-quarter-height abutments shall be abutments where the exposed height of the front face of the abutment is three-quarters of the vertical distance between the back of verge level and the bridge deck soffit.
- 2.7.5 Unless otherwise specified, for new Structures, the design of the New Works shall provide deck edges with cantilevers, which shall be a constant dimension over the length of the superstructure. The minimum widths of cantilevers shall be as noted below, where the span lengths shall be measured along the skewed length where the structure is skewed:
- (i) 500mm where the superstructure is an insitu concrete slab with a span between 10m and 15m
  - (ii) 1000mm where the superstructure is an insitu concrete slab with a span between 15m and 25m
  - (iii) 2000mm where the superstructure is an insitu concrete slab with a span in excess of 25m

Part 2 Specific Requirements

---

- (iv) 500mm where the superstructure is precast beam and insitu concrete slab with a span below 15m
  - (v) 1000mm where the superstructure is precast beam and insitu concrete slab with a span of 15m and above
  - (vi) 500mm where the superstructure is composite steel girders with an insitu concrete slab with a span between 10m and 15m
  - (vii) 1000mm where the superstructure is composite steel girders with an insitu concrete slab with a span between 15m and 25m
  - (viii) 2000mm where the superstructure is composite steel girders with an insitu concrete slab with a span in excess of 25m
- 2.7.6 For structures with multiple spans the minimum cantilever width shall be as defined in Section 2.7.5 using the longest of the multiple spans.
- 2.7.7 Cantilevers are not required where the superstructure is an in-situ concrete slab with a span below 10m.
- 2.7.8 For composite steel girder and in-situ concrete slab superstructures the cantilever width shall be measured from the outside edge of the parapet edge beam to the outer face of the outer girder web.
- 2.7.9 All concrete wingwalls and retaining walls with a patterned profile finish shall have a cantilevered cope. The minimum width of the cantilever shall be 250mm.
- 2.7.10 Where deck edges and cantilevers of existing Structures are to be reconstructed, the existing cantilever width shall not be reduced.
- 2.7.11 All wingwalls, retaining walls and bridge decks shall have copes with a constant inward 2.5 per cent crossfall.
- 2.7.12 The use of leaf piers shall not be adopted unless otherwise permitted in Section 3 of Schedule 2 Part 2 of this Agreement.
- 2.7.13 Unless otherwise stated, intermediate piers at Overbridges shall be circular columns which have a maximum diameter of 1.2 metres and a minimum distance of 4 metres between centres.
- 2.7.14 Where the design of the New Works includes prefabricated elements including, but not limited to, precast concrete beams or steel girders as main members in deck construction, the deck shall be made structurally continuous over intermediate piers.
- 2.7.15 Where the design of the New Works includes a transverse diaphragm over intermediate piers, it shall be formed within the depth of the deck with no extension below the deck soffit.
- 2.7.16 The use of a pier crosshead beam in the design shall not be permitted.
- 2.7.17 The use of gabions shall not be permitted in the Design of the New Works.

## Part 2 Specific Requirements

**2.7.18 Overbridges**

- 2.7.18.1 Overbridges are Structures identified as such in Appendix H, and are typically new Structures which span over Trunk Roads to be constructed as part of the New Works.
- 2.7.18.2 The acceptable forms of Overbridges shall be as defined on drawings B1033200/CD/DEF/ST/001 and B1033200/CD/DEF/ST/002.
- 2.7.18.3 Where there are multiple main spans over Trunk Roads to be constructed as part of the New Works they shall be of equal length unless the road geometry below prevents it due to the presence of slip roads. Where this is the case the acceptable difference in span length shall be the width created by the slip road at the structure location.
- 2.7.18.4 Both abutments shall take the same form and shall be either:
- (i) no greater than half height abutments provided no other supports are located in the adjacent earthwork slopes or;
  - (ii) completely buried bank seat type abutments either with or without a single line of supports in the adjacent earthwork slopes.
- 2.7.18.5 Unless otherwise stated, wingwalls to Overbridges shall be parallel to the road above.
- 2.7.18.6 Where the superstructure of an Overbridge is inclined at an angle of more than 2.2 degrees to the horizontal, measured across the full longitudinal length of the Structure, a bank seat type abutment with a single line of supports in the adjacent slopes shall not be permitted at the low end of the Structure. Both abutment types stated in clause 2.7.18.4 shall be permitted at the high end of the Structure..
- 2.7.18.7 Where the slope of the earthworks from the back of the verge up to the bridge deck soffit is greater than 30 degrees a bank seat type abutment with a single line of supports in the adjacent earthwork slopes shall not be permitted.
- 2.7.18.8 Where concrete plinths are used in place of a central reserve road restraint system at Overbridge pier locations, the top of the plinth shall align with the top of the adjacent road restraint system. If the adjacent road restraint system is a concrete barrier then the profile of the traffic face of the concrete barrier shall be continued along the traffic face of the plinth.
- 2.7.18.9 Adequate working width shall be provided from the front face of concrete plinths to structural supports.
- 2.7.18.10 Where steel girders are used for all Overbridges they shall be painted with the colour RAL 7046.
- 2.7.18.11 Where steel girders are used for some Overbridges, and concrete is used for other Overbridges, the steel girders shall be painted with the colour RAL 9002.

**2.7.19 Underbridges**

- 2.7.19.1 Underbridges are Structures identified as such in Appendix H, and are typically Structures which span over obstacles crossed by the Trunk Roads to be constructed as part of the New Works. Where Underbridges span over roads they shall be considered as either Junction Underbridges or Side Road Underbridges, as identified in Appendix H.
- 2.7.19.2 Unless otherwise stated, the form of the Junction Underbridges shall be single span structures with no greater than half-height abutments.

---

**Part 2 Specific Requirements**

---

- 2.7.19.3 The form of the Side Road Underbridges shall be single span structures with no greater than three-quarter-height abutments.
- 2.7.19.4 Unless otherwise stated, wingwalls to Junction Underbridges and Side Road Underbridges shall be parallel to the road above.
- 2.7.19.5 Where the superstructure is composite steel girders with an insitu concrete slab for all Junction Underbridges and Side Road Underbridges they shall be painted with the colour RAL 7046.
- 2.7.19.6 Where the superstructure is composite steel girders with an insitu concrete slab for some Junction Underbridges, and Side Road Underbridges, and the superstructure is an insitu concrete slab or precast beam and insitu concrete slab for other Junction Underbridges and Side Road Underbridges, the steel girders shall be painted with the colour RAL 9002.
- 2.7.19.7 Lighting below Underbridges shall be soffit mounted, and shall be between beams where a beam and slab deck is provided. Lighting columns shall not be permitted.

**2.7.20 Underpasses**

- 2.7.20.1 Underpasses are those Structures identified as such in Appendix H and are typically Structures which span over pedestrian or agricultural routes crossed by the Trunk Roads to be constructed as part of the New Works. Where an Underpass is identified as a Farm Underpass in Appendix H the requirements of Section 2.12.2.21 shall apply.
- 2.7.20.2 Unless otherwise stated, wingwalls to Underpasses shall be parallel to the road above.
- 2.7.20.3 All exposed internal and external walls of all NMU Underpasses identified as such in Appendix H shall have a proprietary anti-graffiti coating applied to their full area including any stone masonry facing.

**2.7.21 Structures Over Watercourses**

- 2.7.21.1 The design of the Structures listed below shall ensure that the ratio of the overall length of the longest abutment divided by the mean height from the watercourse bank to the soffit shall be no greater than 10:
- (i) PS02 - Limpet Burn Underbridge
  - (ii) PS06 - Burn of Muchalls Underbridge
  - (iii) PS11 - Blaikiewell Burn Underbridge
  - (iv) PS41A – Bogenjoss Burn Underbridge
  - (v) PS48 - Goval Burn Underbridge 1 (B977 West)
  - (vi) PS50 - Mill Lade Underbridge (A947)
  - (vii) PS51 - Goval Burn Underbridge 2 (A947)
  - (viii) PS54 - Goval Burn Underbridge 3 (A90)
- 2.7.21.2 For the Structures listed in 2.7.21.1 above wingwalls shall be either parallel to the road over the structure or played at up to 45° to the road over the structure.
- 2.7.21.3 For the purposes of the design of the New Works, spate shall be assumed to be the flood flow for a storm with a return period of 25 years.

Part 2 Specific Requirements

---

- 2.7.21.4 Where the watercourse is subject to tidal influence, spate flow levels shall be the peak flow levels which would occur during a storm with a return period of 25 years simultaneous with a tidal event with a high water level of mean high water springs.
- 2.7.21.5 Manholes shall be provided to culverts at locations along the length of the culvert at spacings of not more than 50 times the diameter or clear span of such culvert, subject to a maximum spacing of 90 metres. Manholes shall not be coincident with any part of the carriageway above the culverts.
- 2.7.21.6 The design of the watercourse Structures and the like shall make provision for safe access for inspection and maintenance purposes.
- 2.7.21.7 The design and selection of clear span for watercourse Structures shall be such that the land adjacent and upstream of the Structures shall not suffer inundation under design flood conditions.
- 2.7.21.8 The Structure for the watercourse shall be designed to accommodate the flood flow for a storm with a return period of 200 years with a minimum freeboard of 300mm.
- 2.7.21.9 The Design for all watercourse Structures shall in addition be in conformance with the New Works Guidance Booklet: *River Crossings and Migratory Fish - A Consultation Paper* produced by the Scottish Executive (April 2000).
- 2.7.21.10 Where it is proposed to modify existing watercourse Structures, including extending watercourse Structures, the Design shall ensure that the existing cross-section is maintained.
- 2.7.21.11 The minimum span of each new Structure shall not be less than any existing Structure it is replacing.
- 2.7.21.12 Where an Underpass is combined with a watercourse crossing, the Underpass shall be separated from the watercourse using a 1.5m high parapet.

**2.7.22 Post-Tensioned Construction**

- 2.7.22.1 Where the Company proposes to use post-tensioned construction they shall consult and comply with the requirements of Transport Scotland (Bridges Branch). The Company shall provide Consultation Certificates in accordance the Certification Procedure in respect of this requirement.
- 2.7.22.2 The design of the New Works and construction of post-tensioned concrete shall comply with the requirements and recommendations provided in the latest edition of Concrete Society Technical Report No 72 Durable Post-Tensioned Concrete Structures unless stipulated otherwise in these New Works Requirements.
- 2.7.22.3 The Company shall ensure that the supplier and installer of prestressing tendons shall be fully certified in accordance with the UK Certification Authority for Reinforcing Steels ("CARES") Certification Scheme for the supply and Installation of Post-tensioning Systems in Concrete Structures, in accordance with CARES Appendix 2a(i) or equivalent.
- 2.7.22.4 To avoid second order effects due to beam deflections between points where the tendons are fixed, external tendons shall be restrained transversely relative to the concrete section at centres not exceeding 12 times the minimum depth of the beam between the fixing points.
- 2.7.22.5 In the absence of test results or other investigation justifying smaller values, the radius of curvature of external tendons in the deviators shall not be less than the following values:

## Part 2 Specific Requirements

**Tendon (strand number – size) Minimum radius (metres)**

|                        |     |
|------------------------|-----|
| 19 -13mm and 12 – 15mm | 2.5 |
| 31 -13mm and 19 – 15mm | 3.0 |
| 55 -13mm and 37 – 15mm | 5.0 |

- 2.7.22.6 Where precast segmental construction is adopted, the tendons shall be external and replaceable without damage to either the tendons or the Structure. In addition, adequate provision shall be made for inspection and maintenance of the tendons.
- 2.7.22.7 The Company shall ensure that the supplier and installer of grouting for post-tensioning systems shall be fully certified in accordance with the CARES Certification Scheme for Void Grouting of Post-tensioning System in Concrete Structures in accordance with CARES Appendix PT2 (a) v or equivalent.
- 2.7.22.8 For insitu construction using bonded tendons the Company shall carry out a full-scale grout trial in accordance with the Specification and the latest edition of the Concrete Society Technical Report No 72 Durable Post-Tensioned Concrete Structures, prior to construction of any in situ post tensioned bridges.
- 2.7.22.9 For insitu construction using bonded tendons a full-scale grout trial shall be to the profile of a typical tendon in each Structure and shall be over the full length of the tendon contained in each Structure design.
- 2.7.22.10 Insitu construction using unbonded internal tendons shall not be permitted in the Design.

**2.8 Structural Finish**

- 2.8.1 Finishes to Structures shall be such that a consistency is achieved throughout the New Works.
- 2.8.2 With the exception of Overbridge piers which shall comply with the requirements of Section 2.8.7 all exposed in situ structural concrete constituents shall provide a consistency of colour and exposure.
- 2.8.3 Plain concrete finishes shall not be permitted for large areas of exposed vertical surfaces except for the interior and wingwalls of culverts.
- 2.8.4 Unless otherwise stated all exposed vertical concrete surfaces on reinforced concrete wingwalls, abutment walls, retaining walls and interior surfaces of underpasses, shall have a patterned profile type finish which shall be consistent throughout the scheme.
- 2.8.5 Unless otherwise stated the patterned profile type finish shall be rectilinear panels defined by recessed chamfered joints and recessed equally spaced tie holes as shown on drawing B1033200/CD/DEF/ST/003. Dimensions for this type of finish shall be rectilinear panels 1170 vertically x 2390mm horizontally, formed with recessed chamfered joints 50mm wide x 20mm deep horizontally and 50mm wide x 10mm deep vertically. Recessed equally spaced tie holes shall be 50mm diameter x 20mm deep located 200 x 200mm from each corner. The concrete face shall have an F4 finish.
- 2.8.6 Rectilinear panels to wing walls shall be set out from the top corner where the top of the wing wall meets the abutment. Panels on the front face of the abutment shall be set out from the centre of the abutment.

## Part 2 Specific Requirements

- 2.8.7 Unless otherwise stated, all concrete Overbridge piers shall comprise a dark grey coloured concrete comprising 5% black iron oxide (or similar) and exposed 10mm silver grey coloured granite aggregate finish. Samples of the required finish are available for viewing at the Glasgow office of Jacobs U.K. Limited (95 Bothwell Street, Glasgow, G2 7HX, UK) contact [REDACTED].
- 2.8.8 Prior to commencement of the Works the Company shall provide samples of the bridge pier finish to the satisfaction of the Contracting Authority. This shall be used as the datum for achieving a consistency of colour and exposure for all Overbridge piers.
- 2.8.9 All concrete Overbridge piers shall have horizontal recessed joints provided at 1.0 metre centres set out from deck soffit level. All joints shall be formed by 2 No. 25mm x 25mm chamfers with a maximum of 10mm between.
- 2.8.10 Concrete finish class F1 and F2 as defined in the Specification shall not be permitted on any exposed concrete surface.
- 2.8.11 Exposed concrete arises shall be finished with a 25 millimetre by 25 millimetre chamfer unless otherwise specified.
- 2.8.12 Where steel universal beam, plate girder or box construction is adopted:
- (i) splices, where provided in internal spans, shall be positioned symmetrically about the centre line of the span;
  - (ii) splices, where provided in end spans, shall be positioned a distance from the adjacent pier proportional to the distance from the pier to a splice, if provided in the adjacent internal span, in the ratio of the end span to adjacent internal span. Where no splice is provided in the adjacent internal span, the splice in the end span shall be positioned to suit the design of the end span;
  - (iii) with the exception of bearing stiffeners, intermediate stiffeners shall not be permitted on the outer face of steel universal beam and plate girders at the edge of the deck;
  - (iv) where steel box construction is adopted the external surfaces of the boxes shall be free of both intermediate stiffeners and / or bearing stiffeners; and
  - (v) the use of bolted splices on external members shall not be permitted. Only full strength butt welds shall be allowed.
- 2.8.13 The interior surfaces of accessible steel box sections shall be painted. The paint colour code shall be BS 10C33.

## 2.9 Service Ducts

- 2.9.1 The design of the New Works shall include the services and service duct requirements specified in Appendix H.
- 2.9.2 The design of all service ducts shall make due allowance for anticipated settlement of embankments and structural elements.
- 2.9.3 Service ducts, pipes and the like shall not be exposed in the finished Structure.

Part 2 Specific Requirements

---

- 2.9.4 Wherever possible, service ducts shall be accommodated within the raised verges across the bridge superstructure and shall be surrounded with Class C28/35 fibre reinforced air entrained concrete as defined in Section 2.12.
- 2.9.5 Where service ducts are accommodated in raised verges across the bridge superstructure, the minimum depth of concrete cover over the duct shall be 75 millimetres and the minimum width of concrete between ducts shall be 50 millimetres.
- 2.9.6 Where the design of the New Works requires the use of service troughs, the troughs shall be fully waterproofed, inspectable and positively drained. In addition, sufficient space around services shall be agreed with the service authority to enable future inspection, maintenance and replacement of the service.
- 2.9.7 Ducts shall be suitably sleeved at any expansion joints to prevent the ingress of water.
- 2.9.8 All ducts and sleeves shall be capable of carrying accidental actions from vehicles on the bridge in accordance with Eurocode BS EN 1991-2.
- 2.9.9 Ducts, whether empty or containing services, shall be sealed to prevent the ingress of water.
- 2.9.10 All apparatus carried by bridge decks shall be replaceable without disruption to, or removal of the structural concrete or the waterproofing system.
- 2.9.11 Notwithstanding any other provisions of the Agreement, ducts within bridge decks shall be of a minimum 100 millimetres diameter.
- 2.9.12 The location of apparatus through or adjacent to Structures shall meet the requirements of the Statutory Undertakers.
- 2.9.13 Access chambers shall be provided at each end of each Structure carrying apparatus and shall be so designed to curtail passage of water along ducts.
- 2.9.14 Each service duct chamber shall be suitably drained. Covers and frames for service duct access chambers shall conform with Class D400 and Class B125 to BS EN 124, be watertight and have a strength class appropriate to their location.

**2.10 Structural Drainage**

- 2.10.1 The design of all drainage shall make due allowance for anticipated settlement of embankments and deflection of structural elements.
- 2.10.2 Unless stated otherwise, sub-surface road drainage shall not be contained within or suspended below bridge superstructures.
- 2.10.3 Systems for the drainage of surface water from the superstructure shall be so designed that water shall not be allowed to fall freely from the superstructure.
- 2.10.4 Drainage pipes shall not be exposed in the finished Structure.

Part 2 Specific Requirements

---

- 2.10.5 Drainage systems shall not contain details which shall be integral with either the superstructure or sub-structure of any Structure, such as downpipes cast into abutments.
- 2.10.6 Bridge decks shall be provided with an adequate surface water drainage system, minimum diameter 100 millimetres, which shall be capable of being rodded from both ends. The maximum distance between rodding points and access points in combined kerb and drainage units shall be 40 metres.
- 2.10.7 Drainage pipes shall be suitably sleeved at any expansion joints to prevent the egress of water.
- 2.10.8 Holes shall be provided to drain the voids of superstructures. The holes shall be formed such as to prevent passage of water along the underside of the superstructure and shall discharge to an area remote from the carriageway.
- 2.10.9 A positive drainage system shall be provided to drain any water which may reach the deck waterproofing.
- 2.10.10 All Structures drainage outfalls shall be fitted with a suitable vermin cover.
- 2.10.11 The top surfaces of bridge superstructures shall have adequate falls to prevent ponding thereon.
- 2.10.12 Manholes shall be provided at each end of each Structure. Covers and frames shall conform with Class D400 of BS EN 124 and be watertight.
- 2.10.13 Drainage water from the superstructure of any Structure shall not be discharged into the drainage layer behind the sub-structure. Openings through the superstructure to allow the passage of surface water drainage shall not be permitted.
- 2.10.14 All Structures shall incorporate a permeable backing layer in accordance with Clause 513 of the Specification for Highway Works to vertical earth faces. A continuous system of porous or perforated drain pipes not less than 150mm diameter shall be provided below the permeable backing layer in order to collect and dispose of any water percolating through the permeable backing layer. Facilities shall be included for rodding the whole length of the system from inspection manholes positioned at both ends. Weep holes located above ground level shall be provided in the Structure as a visual check that the system is functioning correctly, and limit the rise in water level in the event of a drainage failure. The system shall be connected to a suitable drainage system via a manhole or catchpit or discharged to a suitable outfall. Permeable backing and drainpipes are not required to culverts subject to the culvert being designed for hydrostatic loads.
- 2.10.15 Positive drainage shall be provided to all underpasses in accordance with TD 36 of the DMRB.
- 2.10.16 Drainage systems shall be sufficiently robust to withstand damage during cleaning and shall be resistant to all commonly occurring chemical spillages.
- 2.10.17 Bridge superstructures shall project beyond the substructure such as to prevent water from running down piers and abutments.

## Part 2 Specific Requirements

- 
- 2.10.18 Suitable drip checks shall be provided at all copings, parapet cantilevers, soffit edges, edge beams, superstructure ends over abutments and elsewhere to prevent runoff to the underside of Structures and adjacent vertical faces.
- 2.10.19 Concrete drip checks shall take the form of 100 to 150 millimetres wide by 75 millimetres deep projections below the adjacent soffit.
- 2.10.20 Groove type checks at the edge of bridge decks shall not be permitted.

**2.11 Verges, Side Slopes and Paved Areas**

- 2.11.1 Raised verge construction across bridge superstructures shall continue to the end of any wing walls, return walls, parapet extensions or retaining walls which are returned parallel to the carriageway related to the verge under consideration.
- 2.11.2 Verges shall be designed to provide a smooth transition between the Structures and embankments.
- 2.11.3 Raised verge construction across bridge decks shall consist of Class C28/35 fibre reinforced air entrained concrete as defined in Section 2.12. The surface finish shall be hot rolled asphalt, subject to compliance with Schedule 2 Part 2 of this Agreement, or have a brushed concrete surface finish to give a non-slip surface.
- 2.11.4 The minimum verge crossfall towards the carriageway shall be 2.5 per cent and any widened verges shall be adequately drained.
- 2.11.5 Bridge decks shall be kerbed. Kerb upstands across bridge decks shall be in accordance with TD 27 of the DMRB for Trunk Roads or in accordance with the Relevant Authorities requirements for Side Roads.
- 2.11.6 Where Overbridges are located in a full height rock cutting the exposed natural rock beneath the plan area of the Overbridge shall be retained where possible to act as the apron.
- 2.11.7 Side slopes below the plan area of Overbridges in part height rock cuttings shall retain the natural rock beneath where possible with the remaining area filled with rock fill. Rock fill shall be such that no individual rock shall pass a BS 125mm sieve. Rock fill shall be laid to form a minimum 450mm thick layer placed on a geotextile separator and lightly compacted to form a stable slope which shall match the colour and texture of the exposed rock in the adjacent part of the cutting . The plan arrangement shall include the width of the bridge deck and shall splay at an angle between 30 and 45 degrees to the line of the cope from the point where the cope meets the top of the earthworks slope down to the exposed rock cut.
- 2.11.8 Side slopes below all Junction Underbridges, Side Road Underbridges and Overbridges not in full height or part height rock cuttings shall have a stone masonry apron constructed in accordance with BS 5628, SHW Series 2400 and the following:
- (i) the colour, size, shape, type and texture of the stones used shall match that of stone masonry walls in the local area;
  - (ii) stones shall be laid flat to the slope of the adjacent earthworks;

## Part 2 Specific Requirements

- (iii) stones shall be laid in a random rubble arrangement of either coursed or un-coursed construction to match the pattern of stone masonry walls in the local area;
  - (iv) joints shall be mortar joints not exceeding 15mm in width and shall be finished flush with exposed stone masonry faces;
  - (v) the full perimeter of the aprons shall incorporate a border constructed from a single line of stones 400mm wide; and
  - (vi) stones shall be bedded in such a way that prevents them being removed or dislodged as a result of vandalism.
- 2.11.9 Before commencing construction of the stone masonry aprons sample panels shall be prepared of a suitable size to demonstrate to the satisfaction of the Contracting Authority that the required finish shall be achieved by the materials and methods proposed.
- 2.11.10 The stone masonry apron below the plan area of all Junction Underbridges and Side Road Underbridges shall match the width of the bridge deck above measured from outside face of parapet cope to outside face of parapet cope.
- 2.11.11 Stone masonry aprons beneath Overbridges shall be shaped as defined in drawing B1033200/CD/DEF/ST/004 unless, where intermediate column supports are provided, it is not possible to contain all of the intermediate column supports within the stone masonry apron. Where this is the case the apron will take the form as described in Section 2.11.10.
- 2.11.12 For all bridges other than Overbridges, the stone masonry apron shall continue to the front of the verges.
- 2.11.13 Where Trunk Road verges beneath Overbridges have a plan length of 15m or less, measured from the outside face of parapet cope to outside face of parapet cope, the verge treatment shall be continuous with the verge treatment on either side of the Overbridge. Where Trunk Road verges beneath Overbridges have a plan length greater than 15m measured from the outside face of parapet cope to outside face of parapet cope, the length of verge defined on drawing B1033200/CD/DEF/ST/004 shall be surfaced with a stone masonry apron with the treatment of the remaining length of verge continuous with the verge treatment on either side of the Overbridge.
- 2.11.14 Central reserves (excluding hard strips) below the plan area of all bridges shall be surfaced in accordance with Section 1.8 of Schedule 2 Part 2 of this Agreement.
- 2.11.15 Carriageway surfacing over Structures shall be a minimum thickness of 120 millimetres including any additional protective layer to the waterproofing system in accordance with Transport Scotland Interim Amendment Number 24. An additional protective layer of sand asphalt shall only be provided when required by the individual waterproofing system.

## 2.12 Durability

### 2.12.1 General

- 2.12.1.1 Annex C1 of Transport Scotland Interim Amendment Number 39 in reference to BD 57, Design for Durability, and Transport Scotland Interim Amendment Number 23

## Part 2 Specific Requirements

shall be taken to be requirements for the design, execution and completion of all Structures.

- 2.12.1.2 Bridges with lengths not exceeding 60 metres and skews not exceeding 30 degrees shall be of integral construction and earth pressures shall be determined in accordance with the PD 6694 Part 1. All bridges shall be designed with a continuous superstructure.
- 2.12.1.3 Integral abutments which include bearings shall not be permitted.
- 2.12.1.4 In-span discontinuities, generally referred to as half joints, shall not be permitted in bridge superstructures.
- 2.12.1.5 The use of concrete hinges of the type described in BE 5/75 and BA 93/09 shall not be permitted.

## 2.12.2 Concrete

- 2.12.2.1 All structural concrete shall be designed concrete in accordance with BS EN 206-1 and BS 8500, subject to the requirements of these New Works Requirements and Transport Scotland Interim Amendment Number 23.
- 2.12.2.2 Unless otherwise stated, all exposed concrete surfaces in the New Works except internal faces of culverts carrying watercourses and drainage, shall be impregnated in accordance with the requirements of BD 43 of the DMRB. This shall include all surfaces of reinforced or prestressed concrete which shall be exposed to the atmosphere in the completed New Works. Exposed concrete surfaces of existing structures shall be impregnated, as stipulated in accordance with the requirements of BD 43.
- 2.12.2.3 Any curing agents used shall be compatible with the surface impregnant.
- 2.12.2.4 All structural concrete shall have a minimum cement / combination content of 360 kilograms per cubic metre.
- 2.12.2.5 All structural concrete shall have a maximum water / cement ratio of 0.45.
- 2.12.2.6 All structural concrete above ground level, other than for precast prestressed concrete bridge beams, shall be air entrained as follows:

| <b>Maximum aggregate size</b> | <b>Minimum air content</b> |
|-------------------------------|----------------------------|
| 20 millimetres                | 3.5 per cent               |
| 14 millimetres                | 4.5 per cent               |
| 10 millimetres                | 5.5 per cent               |

- 2.12.2.7 Other than where it is required for factory precast prestressed concrete bridge beams, structural concrete strength class C50/60 shall be permitted above ground level only if it is required for structural purposes. In such circumstances, concrete strength class C50/60 shall only be permitted subject to the prior approval of Transport Scotland (Bridges Branch).
- 2.12.2.8 The design of all structural concrete for buried components, and any additional protective measures that may be required, shall ensure durability taking into account the design chemical class appropriate to the chemical composition of the soil and groundwater in addition to the stated strength requirements. Sulfate-resisting Portland cement may be required for the most aggressive design chemical classes.

## Part 2 Specific Requirements

2.12.2.9 Footway / verge infill concrete shall be placed such that shrinkage cracking is minimised. This shall require either restricting the length of pours or the introduction of crack inducers at discrete intervals for longer pours.

2.12.2.10 Notwithstanding the requirements of Table 1 of Transport Scotland Interim Amendment No 23 the following strength classes and cement / combinations shall apply to structural concrete for the locations indicated in Table 4 below:

**Table 4 Permissible Cement Combinations and Minimum Strength Requirements**

| TS Application                                                                                  | Minimum Strength Class | TS Permitted Cement Combinations (refer to Table A.6 of BS 8500-1:2006) |      |       |                      |                         |                          |       |
|-------------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------|------|-------|----------------------|-------------------------|--------------------------|-------|
|                                                                                                 |                        | CEM I                                                                   | II A | IIB-S | IIB-V<br>IIB +<br>SR | IIIA<br>+<br>IIIA<br>SR | IIIB<br>+<br>IIIB<br>+SR | IVB-V |
| Footway/Verge Infill Concrete                                                                   | C28/35AF               |                                                                         | ✓    | ✓     | ✓                    | ✓                       | †                        | ✓     |
| In situ reinforced concrete above ground                                                        | C32/40 a.e. or C40/50  |                                                                         | ✓    | ✓     | ✓                    | ✓                       | †                        | ✓     |
| Site cast precast reinforced concrete above ground                                              | C32/40 a.e. or C40/50  |                                                                         | ✓    | ✓     | ✓                    | ✓                       | †                        | ✓     |
| Factory cast precast rc elements, e.g. box culverts, reinforced soil retaining wall panels etc. | C32/40 a.e. or C40/50  | ✓<br>(C40/50 only)                                                      | ✓    | ✓     | ✓                    | ✓                       | †                        | ✓     |

AF Air Entrained, Fibre Reinforced

a.e. Air Entrained

2.12.2.11 Minimum concrete cover to reinforcement shall be appropriate to the most onerous exposure class at any particular location within a Structure for an intended working life of at least 100 years. Tolerance  $\Delta c$  between the minimum cover and the

## Part 2 Specific Requirements

nominal cover to allow for fixing precision shall be in accordance with Transport Scotland Interim Amendment Number 23.

- 2.12.2.12 To ensure that the designed minimum cover to reinforcement shall be achieved, the Company shall carry out a cover meter survey to finished concrete sections in accordance with Clause 1714 of the Specification within one day of removal of formwork and shall submit the results to the Contracting Authority within one further day.
- 2.12.2.13 The use of paint systems or the equivalent to reduce the minimum cover shall not be permitted.
- 2.12.2.14 The Company shall put in place curing procedures which shall include effective methods of monitoring the temperature differences within the concrete members.
- 2.12.2.15 The methods of curing and their duration shall be such that the concrete shall have satisfactory durability and strength and the member shall suffer a minimum of distortion, be free of excessive efflorescence and shall not cause, by its shrinkage, undue cracking in the Structure in excess of the acceptable flexural and early thermal cracking limits.
- 2.12.2.16 Reinforced concrete sections shall be designed such that they comply with the flexural and early thermal crack limits required by Eurocode BS EN 1992-2 for the relevant exposure conditions.
- 2.12.2.17 Exposed or debonded tendons at the ends of precast prestressed beams shall be protected against corrosion.
- 2.12.2.18 If voided concrete slab construction is adopted, then during the placement of concrete, the difference in level of the placed concrete on either side of the void formers shall be controlled to avoid movement of the formers and shall not exceed 150 millimetres.
- 2.12.2.19 Provision shall be made for compacting the concrete below void formers and for drainage of the formed voids. The drainage shall be formed in such a manner as to prevent passage of water along the underside of the deck and shall discharge to an area remote from the carriageway.
- 2.12.2.20 All formed buried concrete surfaces shall be treated with two coats of bitumen paint as specified in Clause 2004 of the Specification.
- 2.12.2.21 Accommodation / farm underpasses shall incorporate sacrificial concrete protection against diesel spillage, abrasion and animal fouling in accordance with the following:
- (i) a sacrificial concrete invert which is separate from the structural base slab of the underpass shall be provided across the full width of the floor to the following criteria:
    - (a) surface finish and grade shall comprise of:
      - (i) 300 millimetres thick Type 1 sub-base to Clause 803 of the Specification
      - (ii) 150 millimetres thick concrete surfacing to BS 8500 with expansion joints at 40 metre centres and contraction joints at four metre centres (see Drawings C1, C2 and C3 in Volume 3 of the MCHW). The surface finish shall be tamped or brushed.
    - (b) sufficient crossfall and longitudinal gradient shall be provided to minimise the risk of icing during winter;

## Part 2 Specific Requirements

- (ii) sacrificial concrete shall be provided on the internal walls of underpasses extending from the structural base slab of the underpass to one third of the height of the underpass above the sacrificial concrete invert. In the case of reinforced concrete underpasses this may be provided as an additional 50 millimetres cover to the reinforcement and may be provided as part of a profiled patterned finish. A stepped profile will not be acceptable at a third height. In this case an additional 50mm cover shall be provided over the full height;
- (iii) the requirement for sacrificial concrete protection in a(i) and a(ii) above shall be taken into account in the design of the New Works for the span and height of the underpass.

### 2.12.3 Steelwork

2.12.3.1 Structural steelwork shall be protected using a paint system appropriate to an 'Inland' environment and 'Difficult' access in accordance with Series 1900 of the Specification and shall meet the following minimum durability requirements:

- (i) no maintenance up to 12 years
- (ii) minor maintenance from 12 years
- (iii) major maintenance after 20 years.

2.12.3.2 The Company shall consult and comply with Transport Scotland (Bridges Branch) in respect of proposed paint systems, including in respect of completed Specification Appendices, prior to execution of any relevant part of the New Works. The Company shall not commence any painting Works before Consultation Certificates in accordance the Certification Procedure have been provided to the Contracting Authority in respect of this requirement.

2.12.3.3 All paint systems shall comply with the requirements of current Environmental and Health & Safety regulations and legislation.

2.12.3.4 The use of weathering steel shall be permitted. Where weathering steel is used a coloured paint system shall be specified to the outer faces of the outer members as a minimum.

2.12.3.5 Intermittent fillet welds shall not be permitted outwith areas that are completely protected from the adverse effects of weather.

2.12.3.6 The design of steelwork shall ensure the prevention of the accumulation of water, dirt and debris.

2.12.3.7 Exposed structural steelwork shall not be used in the substructures of Structures.

2.12.3.8 Where the design of the New Works includes transition slabs, stainless steel reinforcement, grade 1.4436 or 1.4462 to BS EN 10088 shall be used in connecting a transition slab to an abutment.

2.12.3.9 Transition slabs shall be treated as part of the superstructure with regard to application of the waterproofing system and the provision of either articulation or movement joints.

2.12.3.10 Reinforcement bridging joints, or items penetrating the concrete surface, and also subject to chloride contamination (e.g. dowel bars) shall be stainless steel Grade 1.4436 or 1.4462.

2.12.3.11 Any mechanical bearings, where permitted, shall be either steel with protection of steelwork against corrosion, or stainless steel with the following minimum grades:

Part 2 Specific Requirements

---

- (i) plates and flats shall be 1.4436 or 1.4462;
  - (ii) sliding surfaces shall be 1.4436 or 1.4462; and
  - (iii) fasteners shall have mechanical properties and dimensions that comply with grade A4-70 or A5-80. Chemical composition shall comply with grade 1.4436 or 1.4462.
- 2.12.3.12 Anchorages, including threaded anchorages, cast into concrete for attachments to Structures shall be stainless steel grade 1.4362, 1.4436 or 1.4462.
- 2.12.3.13 Fasteners for parapet anchorages shall be stainless steel with the following minimum grades:
- (i) holding down bolts, studs and nuts shall have mechanical properties and dimensions that comply with grade A4-80. Chemical composition shall comply with grade 1.4436 or 1.4462; and
  - (ii) washers shall be grade 1.4436 or 1.4462.
- 2.12.3.14 Provision shall be made to prevent electrolytic corrosion of dissimilar metals.
- 2.12.3.15 Temporary works shall not be attached to any part of the permanent Structure.
- 2.12.4 Qualifications of Parties Involved in Steelwork
- 2.12.4.1 Parties employed to fabricate structural steelwork shall have the necessary technical capability and competence for the type and value of the work to be undertaken. These requirements will be satisfied by the party being registered and audited through a scheme such as the Register of Qualified Steelwork Contractors Scheme for Bridgeworks (RQSC) to the levels appropriate for the value and technical complexity of the structural steelwork.
- (See <http://www.steelconstruction.org/resources/quality/rqsc-bridgeworks.html>) Similarly, where a party is responsible for the design and erection of steelwork, the above requirement shall apply to the relevant categories and value of the works.
- 2.12.5 Quality Management Schemes - Execution of steelwork
- 2.12.5.1 Parties involved in steelwork shall have an independently certified quality management system complying with EN ISO 9001 in place for all structural steelwork executed in accordance with Series 1800. This requirement will be satisfied by the party being registered to National Highway Sector Scheme 20 "The Execution of Steelwork in Transportation Infrastructure Assets" by a relevant UKAS accredited Certification body.
- 2.12.6 Waterproofing
- 2.12.6.1 Bridge deck waterproofing systems shall be in accordance with Transport Scotland Interim Amendment Number 24, shall have a current British Board of Agrément (BBA) Roads and Bridges Agrément Certificate and shall be capable of being non-destructively tested.
- 2.12.6.2 Waterproofing systems shall be independently tested in accordance with the Specification.
- 2.12.6.3 The independent testing organisation shall have current third party quality assurance certification.
- 2.12.6.4 The whole width of the bridge deck slab between parapet upstands and the parapet upstands to a height of 100 millimetres minimum above the adjacent deck slab shall be waterproofed.

Part 2 Specific Requirements

---

2.12.6.5 In addition to those surfaces specified in the DMRB and elsewhere, the following concrete surfaces shall be waterproofed:

- (i) pier and abutment bearing shelves;
- (ii) inaccessible areas which may be subject to leakage;
- (iii) all internal faces of abutment galleries;
- (iv) vertical faces at deck ends; and
- (v) where buried box sections are proposed in the design including accommodation underpasses, the top surface of the bottom slab. This requirement shall not apply to water carrying Structures e.g. culverts.

2.12.6.6 Further to the testing requirements of the Specification, Holiday testing as defined in the DMRB shall be carried out on the completed waterproofing to check for any discontinuity in the coating and for any thickness less than that specified by the manufacturer.

2.12.7 Resin anchors

2.12.7.1 Chemical Anchorages, including threaded anchorages, dowels and reinforcement bars secured into concrete, rock, stone, masonry or brickwork shall be secured using proprietary resins. The choice of resin shall be appropriate for the substrate material and its preparation, hole orientation, load type(s) and installation and exposure conditions. Polyester resins shall not be used on permanent works and in situations where holes contain or are under water without the written permission of the Contracting Authority.

## **2.13 Maintenance and Inspection**

2.13.1 Provision shall be made for future inspection and maintenance of all Structures. All requirements of Health and Safety Legislation and other relevant requirements shall be observed in such provisions. Standards in excess of the minimum requirements shall be provided where possible.

2.13.2 Where bridge bearings are used they shall be replaceable without requiring the removal of any structural concrete or modification of structural steelwork.

2.13.3 Provisions shall be made to allow for jacking from the substructure during bearing replacement.

2.13.4 Replacement of bearings shall be possible whilst maintaining traffic flows over the Structure in accordance with the requirements of 2171AR of Schedule 2 Part 4 of this Agreement.

2.13.5 Provision for access at Structures shall be made for the following purposes:

- (i) cleaning and painting;
- (ii) maintenance and inspection;
- (iii) jacking, removal / replacement of bearings;
- (iv) removal / replacement of movement joints; and
- (v) inspection of closed cell and box members.

2.13.6 The design for all steel and concrete interfaces on a Structure shall permit ease of access for inspection and maintenance.

## Part 2 Specific Requirements

- 2.13.7 Where voided elements of bridge Structures, e.g. box girder decks, voided piers, voided abutment stems, inspection galleries and the like are provided and are of sufficient size to allow internal inspection, access shall be provided in accordance with the following:
- (i) access to the voids shall, where practicable, be from the underside of the bridge;
  - (ii) access points shall be placed in such positions as to give convenient access, and where their use would not cause interference to traffic;
  - (iii) all access points and access ways within the voids shall be suitably sized and designed to allow for the evacuation of a casualty on a stretcher and the like if necessary;
  - (iv) specific emergency routes and exits shall be identified clearly by signs and shall be provided with lighting;
  - (v) access points to the voids, where provided, shall be carefully located and detailed so as to minimise their visibility to passing traffic;
  - (vi) access points to the voids shall not be permitted on surfaces visible on the main bridge elevation, with the exception of access doors and ancillary arrangements for accessing abutment inspection galleries;
  - (vii) all permanent services, equipment and the like shall be capable of withstanding the prevailing environmental conditions including ingress of dust and water and the natural movement of the Structure;
  - (viii) permanent access ladders or steps, as appropriate, shall be provided at changes in level within the voids;
  - (ix) access ladders and steps shall be provided with guardrails;
  - (x) all walking surfaces shall be provided with a non-slip surface coating compatible with any waterproofing or paint system and shall avoid details which create a risk of tripping and shall be self-draining;
  - (xi) permanent lighting with permanent power supply shall be provided for access routes and access chambers;
  - (xii) lighting levels shall be a minimum of 30 lux. Additional emergency lighting shall be provided in the Structure along emergency routes having a minimum intensity of 0.2 lux and having a separate battery operated power supply and warning notices and signs shall be provided to all mains power boards, valves and the like where the operation may affect the safety of persons using the voids of any such Structure;
  - (xiii) all access points to galleries and voids and the like shall be secured from unauthorized access by provision of lockable steel doors or grills;
  - (xiv) public access to any facilities provided for bridge inspection or maintenance shall be prevented by means of suitable barriers, covers and the like and colonisation of accessible areas by plants, animals or birds shall be prevented by the application of suitable measures to be agreed with the Contracting Authority; and
  - (xv) areas shall be provided in front of abutments to Overbridges for non-integral Structures in accordance with the requirements of, CIRIA C543 *Bridge Detailing Guide* or similar detail, proposals for which shall be submitted to the Contracting Authority in accordance with the Certification Procedure.

---

**Part 2 Specific Requirements**

---

2.13.8 The Design shall ensure that the layout of and access to publicly and privately owned services and supplies shall meet the requirements of the relevant statutory bodies, Undertakers and any other companies as well as the requirements of these New Works Requirements.

**2.14 Reinforced Soil**

2.14.1 The Company shall consult and comply with the requirements of Transport Scotland (Bridges Branch) with respect to the design of reinforced soil Structures (i.e. having a face greater than 70 degrees to the horizontal).

2.14.2 Precast concrete facing panels associated with reinforced soil Structures in the New Works shall be replaceable in the event of damage and shall have a patterned profile finish. The Company shall consult and comply with the requirements of Transport Scotland (Bridges Branch) with respect to such works. The Company shall provide the Contracting Authority with the completed Consultation Certificate in accordance with Section 8 of Part 5 of these New Works Requirements.

2.14.3 Precast concrete facing panels shall comprise square or rectangular panels; cruciform units shall not be permitted.

2.14.4 The top edge of precast concrete facing units shall be finished with a continuous cope.

2.14.5 In the design of reinforced soil Structures, the Company shall take due cognisance of factors including, but not limited to:

- (i) durability;
- (ii) vibration from road traffic;
- (iii) floods;
- (iv) water flows;
- (v) replacement of facing panels; and
- (vi) stability following a vehicular fire and the like.

2.14.6 Where used in conjunction with a parapet, the precast concrete facing panels shall extend to the underside of the parapet cope.

2.14.7 Reinforced soil abutments shall not be permitted.

2.14.8 The dimensional tolerances on completion of erection of reinforced soil Structures shall comply with the limitations given in Appendix L of these New Works Requirements. The design tolerances used shall be stated in the Structures Design Statement for each reinforced earth Structure.

2.14.9 Permanent reference points shall be provided on reinforced soil Structures to enable the extent of deformations which occur following completion of the New Works to be monitored.

2.14.10 Reinforced soil slopes (i.e. having a face not exceeding 70 degrees to the horizontal) shall be so finished that they are capable of supporting vegetation.

## **2.15 Corrugated Steel Buried Structures**

- 2.15.1 Corrugated steel buried structures shall not be permitted for Structures on Side Roads.
- 2.15.2 The use of corrugated steel buried Structures to provide access for vehicular traffic through the Structure shall not be permitted.
- 2.15.3 The minimum durability requirement for corrugated steel buried Structures shall be for an aggressive environment.
- 2.15.4 All corrugated steel buried Structures shall have a sacrificial concrete invert protection. The invert shall extend across the full width of the floor and a third of the way up the sides of the Underpasses. This requirement shall be taken into account in the Design of the span and height of the Structure.
- 2.15.5 The ends of all corrugated steel buried Structure type culverts shall be provided with a structural headwall or a concrete ring beam of 300 millimetres minimum thickness. The concrete ring beam shall follow and finish flush with the slope of the adjacent earthworks.
- 2.15.6 Corrugated steel buried Structures shall be designed in accordance with BD 12 of the DMRB.
- 2.15.7 Corrugated steel buried Structures shall have a secondary protective coating system applied to permanently accessible surfaces, with a life to first maintenance of six years.
- 2.15.8 It shall be certified in accordance with BD 12 of the DMRB and shall have a life to major maintenance of 20 years.
- 2.15.9 The secondary protective system shall not be taken into account in determining the sacrificial steel thickness,

## **2.16 Fill to Structures**

- 2.16.1 With reference to HD 35/04, the use of Spent Oil Shale (Blaise) is not permitted as selected granular fill to structures.

## **2.17 Existing Structures**

- 2.17.1 Where it shall be proposed by the Company to incorporate any part of an existing Structure into the design of the New Works, it shall be the Company's responsibility to ensure the adequacy of such Structure within the design of the New Works and carry out all remedial works and strengthening required such that it meets all the necessary standards and certification requirements as set out in the Agreement.
- 2.17.2 The following durability and serviceability limit state criteria defined within the DMRB and Eurocodes for new Structures shall not apply to existing structures or parts of existing Structures incorporated within the design of the New Works:
- (i) stress limitations in concrete and reinforcement;
  - (ii) cover to reinforcement;
  - (iii) minimum reinforcement areas; and

Part 2 Specific Requirements

---

- (iv) crack widths.
- 2.17.3 All existing Structures to be retained shall be assessed and, if required, strengthened in accordance with the assessment procedure detailed in Appendix J. In respect of bridge bearings, provided there is no evidence of cracking, structural failure or other instability, a qualitative assessment shall be acceptable. In respect of free-standing piers, a quantitative assessment shall be required. The contents of the assessment reports required in accordance with Appendix J shall be based on the requirements of Annex C of BD 101 of the DMRB.
- 2.17.4 Defects in existing Structures to be retained shall be repaired by the Company in accordance with the Particular Requirements of Section 3.
- 2.17.5 Where the parapets of existing Structures are to be replaced, the replacement parapets shall extend at least two panels or six metres, whichever is the greater, beyond the top of the slope intersecting line.
- 2.17.6 Where an existing Structure is to be extended or amended, the extended or amended Structure form and finishes shall match the existing Structure. The requirements for the extended or amended portions of the existing Structures shall be as for new Structures. Extensions to existing crib walling shall not be permitted; any extension of such structures shall be designed as a new Structure in accordance with these New Works Requirements.
- 2.17.7 Existing Structures that are to be abandoned or made redundant within the Site shall be demolished and removed by the Company.
- 2.17.8 Where an existing Structure shall be demolished, it shall be demolished to a minimum of one metre below finished ground level unless otherwise agreed with the Contracting Authority.
- 2.17.9 If an existing Structure shall be modified, the modifications shall be designed in accordance with these New Works Requirements.
- 2.17.10 The existing elements of an existing Structure to be retained shall be assessed in accordance with the Standards in Section 4 to Volume 3 of the DMRB with the exception of loading requirements which shall be as described in Appendix J.
- 2.17.11 Modifications to existing Structures shall not replicate detailing that is not compliant with the DMRB unless otherwise agreed with Transport Scotland (Bridges Branch).
- 2.17.12 Where existing Structures are to be modified the interaction between the modified section and the existing Structure shall not adversely affect the short and long term integrity of both elements. Items to be considered shall include, but not be limited to:
- (i) differential settlement;
  - (ii) creep;
  - (iii) shrinkage;
  - (iv) differential deflection;
  - (v) early thermal cracking; and
  - (vi) traffic induced vibrations, deflection and stresses.

Part 2 Specific Requirements

---

- 2.17.13 Where maintenance painting of existing Structural steelwork shall be carried out, Structural steelwork shall be protected using a paint system appropriate to an 'Inland' environment and 'Difficult' access in accordance with Series 5000 of the Specification and shall meet the following minimum durability requirements:
- (i) no maintenance up to 15 years;
  - (ii) minor maintenance from 15 years; and
  - (iii) no major maintenance up to 20 years.
- 2.17.14 Maintenance painting of existing Structures shall be carried out in accordance with the requirements of BD 87 of the DMRB. As a minimum, existing structures which undergo maintenance painting shall receive a finishing (top) coat in accordance with Table 50/2 of Series 5000 of the Specification for Highway Works to all exposed surfaces of existing steelwork to ensure a consistent appearance over the structure.
- 2.17.15 The colour of the final paint coat on existing structures on which maintenance painting is carried out shall be RAL 9002.
- 2.17.16 The Company's proposed paint systems, including completed Specification Appendices shall be submitted to the Contracting Authority in accordance with the Certification Procedure prior to execution of any relevant part of the New Works.
- 2.17.17 Where a maintenance painting strategy is to be prepared in accordance with Section 3, the Strategy shall include but not be limited to the following:
- (i) health & safety and environmental considerations;
  - (ii) pre-specification overall survey including steel bearings where present;
  - (iii) categories of failure of the existing paint systems;
  - (iv) requirement for feasibility trials for proposed methods of surface preparation and proposed paint systems; and
  - (v) requirement selection and duties of painting inspection firm.
- 2.17.18 Where bearings and movement joints are to be replaced in a Structure the design of such replacement items shall be in accordance with the Eurocodes. In the design of such replacement items, an additional allowance of +2 degrees Celsius shall be made for climate change.
- 2.17.19 Where bearings are to be replaced in a Structure the Company shall consult and comply with Transport Scotland (Bridges Branch) in respect of the live load regime during the replacement of bearings when the Structure is supported on temporary jacks taking account of the Company's specific traffic management proposals during bearing replacement. The Company shall not commence any bearing replacement Works before Consultation Certificates in accordance with the Certification Procedure have been provided to the Contracting Authority in respect of this requirement.

## **2.18 Removal and Replacement of Existing Waterproofing**

- 2.18.1 Surfaces exposed after the removal of existing waterproofing shall be inspected for either spalling or reinforcement corrosion and repaired in accordance with the Specification.

---

**Part 2 Specific Requirements**

---

2.18.2 Areas contaminated with oil or grease or residue from the removed waterproofing system shall be cleaned with a suitable detergent.

**2.19 Construction Tolerances in Structural Concrete**

2.19.1 The tolerances stated in Clause 1770AR of Appendix 0/1 to the Specification shall be adopted in the design, execution and completion of the New Works.

**2.20 Road Lighting**

2.20.1 Where the design of the New Works incorporates road lighting columns on bridge superstructures the Company shall ensure that the design of such columns ensures that they are located behind the traffic face of the bridge parapet at a minimum distance of the working width of the parapet.

2.20.2 Lighting columns shall not be located directly opposite bridge parapet posts.

2.20.3 The attachment of lighting columns to bridge superstructures by means of bracketed steel fixings shall not be permitted.

2.20.4 Wherever possible, street lighting columns shall be provided in line with columns or other intermediate substructures supporting the bridge superstructure.

2.20.5 The layout of street lighting columns on bridge superstructures shall be symmetrical when viewed on the bridge elevation.

2.20.6 The Company shall consult and comply with the requirements of the local authorities, as appropriate, in connection with the design of road lighting on Side Road Structures in their respective boundaries.

2.20.7 All lighting provided at Underpasses shall be vandal proof. All lighting provided at pedestrian/cycleway Underpasses shall provide a level of illumination in accordance with the recommendations of BS 5489: Part 1.

**2.21 Structures Design Statement**

2.21.1 Prior to the commencement of the design of each structure, the Company shall submit a completed Structures Design Statement, including a completed Annex E Choices and Options table, fully defining the design assumptions and parameters to be used in the design of each Structure.

2.21.2 A proforma Structures Design Statement for Structures is provided in Appendix K.

2.21.3 Following completion of the design a final version of the Structures Design Statement (for Construction) shall be submitted with the Design Certificate and Design Check Certificate, which shall be updated to record, in the Choices and Options table provided as an Appendix to the Structures Design Statement, all decisions made by the Designer that affect the standard of the design of the New Works.

2.21.4 The Company shall consult and comply with the requirements of the Relevant Roads Authority regarding the Structures Design Statement for Structures which shall become the responsibility of the Relevant Roads Authority upon Final

Completion. The Company shall provide Consultation Certificates in accordance the Certification Procedure in respect of this requirement.

## **2.22 As Built Records**

- 2.22.1 As built records shall comply with the requirements of BD 62 of the DMRB. In addition, reference shall be made to the document "Transport Scotland Inspection Manual, Principal Inspections of Trunk Road Structures & Location System – March 2009".
- 2.22.2 A Structures Management System Datasheet shall be compiled for each structure and provided to Transport Scotland (Bridges Branch) one month prior to Final Completion.

### **3 Additional Requirements for Particular Structures**

#### **3.1 Structure PS01 – B979 Netherley Road Overbridge**

3.1.1 The Design for Structure PS01 shall ensure compliance with the following:

- (i) If piers are provided they shall be a plain concrete F3 finish with no horizontal recessed joints.

#### **3.2 Structure PS03 – U89K Auquorthies to Ury Road NMU Underpass**

3.2.1 The Design for Structure PS03 shall ensure compliance with the following:

- (i) The internal abutment walls and external wingwalls shall have a stone masonry facing 2.3m in height over their full length. The stone masonry facing shall be constructed in accordance with BS 5628 and SHW Series 2400. The colour, size and shape, type and texture of the stones used shall match that of stone masonry walls in the local area. Stones shall be laid in a random rubble arrangement of un-coursed construction.
- (ii) The remaining exposed areas of concrete to the abutments and wingwalls shall be finished in accordance with Sections 2.8.5 and 2.8.6.
- (iii) Lighting shall be by means of luminaries positioned at ground level and at the top of the internal stone masonry facing.
- (iv) The footway finish through the underpass shall be a light silver grey granite colour.
- (v) The Company shall consult and comply with Aberdeenshire Council on the lighting and footway make-up requirements.

#### **3.3 Structure PS11 – Blaikiewell Burn Underbridge**

3.3.1 The Design for Structure PS11 shall ensure compliance with the following:

- (i) The north east wing wall of PS11 shall be screened by landscaped earthworks such that the exposed height of wall above ground level shall be no greater than 5m. It shall be permitted to splay the lower part of the north east wing wall up to 90 degrees to the road passing over the structure to retain the landscaped earthworks.

#### **3.4 Structure PS13 – Kingcausie Wildlife Overbridge**

3.4.1 The Design for Structure PS13 shall ensure compliance with the following:

- (i) The form of the structure shall adopt one of the acceptable Overbridge forms described in Section 2.7.18.2.
- (ii) The plan arrangement of the landscaping shall be one of the acceptable plan arrangements shown on drawing B1033200/CD/DEF/ST/005.
- (iii) The arrangement of the landscaping shall be one that provides a meandering pathway across the bridge by varying the profile of the topsoil across the bridge.
- (iv) Below the topsoil a suitable arrangement shall be provided to maintain the growth of the landscaping. Below this, a root barrier system is required to protect the waterproofing membrane and structure.

## Part 2 Specific Requirements

- (v) Hardened outer verges 0.6m wide shall be provided between the edges of the landscaping and the bridge parapets.
- (vi) The bridge parapets shall be 1800mm high with solid infill panels 800mm high at the base with an open appearance above with mesh infill complying with Section 2.6.8. Parapets shall extend at least two panels or six metres, whichever is the greater, beyond the top of the slope intersecting line

### 3.5 Structure PS15 – River Dee Crossing

3.5.1 The Design for Structure PS15 shall ensure compliance with the following:

- (i) the commitments set out within the Report to Inform the Appropriate Assessment, prepared in respect of the River Dee Special Area of Conservation, which is an Environmental Assessment Document listed in Schedule 8
- (ii) the form defined on drawings B1033200/CD/DEF/ST/006, B1033200/CD/DEF/ST/007, B1033200/CD/DEF/ST/008, B1033200/CD/DEF/ST/021 and B1033200/CD/DEF/ST/022.
- (iii) The superstructure shall be of concrete construction.
- (iv) The finish to all exposed vertical faces to the piers and abutments shall be to the same requirements for Overbridge piers with the exception of joint positions which shall be as defined on drawings B1033200/CD/DEF/ST/006, B1033200/CD/DEF/ST/007 and B1033200/CD/DEF/ST/008.
- (v) The parapets shall be H4a containment and shall be an open steel parapet of post and rail type.
- (vi) Transparent noise barriers shall be used for noise attenuation and shall be supported by vertical posts and bottom rail only and a top rail shall not be permitted. The top of the noise barrier may be cranked to provide rigidity if required.
- (vii) The noise barrier posts shall have a colour finish to match the parapets.
- (viii) Stainless steel reinforcement shall be provided in the parapet cope over the full length of the structure to remove the requirement for this area to be impregnated in accordance with the requirements of BD 43 of the DMRB.
- (ix) The underside and inclined faces of the box and cantilever soffits of the central span between pier centres shall be excluded from the requirement to be impregnated in accordance with the requirements of BD 43 of the DMRB.
- (x) It shall be permitted to carry the road drainage system within the superstructure. Suitable detailing shall be provided to ensure the drainage system is robust and to prevent leakage and any movement joints shall be located out with the structure. Measures shall be provided to allow any drainage water to escape from the superstructure in the event of a leakage and shall be such that the drainage water does not outfall to the SAC.

### 3.6 Structure PS16 – Milltimber Brae Overbridge

3.6.1 The Design for Structure PS16 shall ensure compliance with the following:

Part 2 Specific Requirements

---

- (i) The parapets and noise barriers shall take the form as defined on drawing B1033200/CD/DEF/ST/009.
- (ii) Transparent noise barriers shall be supported by vertical posts and bottom rail only and a top rail shall not be permitted.
- (iii) The parapet detail on the bridge shall continue round the radii at the ends of the bridge and shall integrate with adjacent boundary fencing / walls / barriers to Approved details.
- (iv) A pedestrian guardrail shall be provided between the south footpath / cyclepath and the carriageway on the overbridge.
- (v) All the other Requirements of Section 2.7.18 shall apply to this structure.

### **3.7 Structure RW01 – Milltimber Retaining Wall**

3.7.1 The Design for Structure RW01 shall ensure compliance with the following:

- (i) The retaining wall shall be positioned at the top of the AWPR cutting a minimum of 3.0m away from the existing property boundary.
- (ii) The exposed height of the wall shall not exceed 3.5m.
- (iii) The exposed concrete face shall have a finish as defined in Section 2.8.5.
- (iv) Landscape planting shall be provided in front of the wall to screen the wall from the AWPR.

### **3.8 Structure RW02 – Kippie Lodge Retaining Wall**

3.8.1 The Design for Structure RW02 shall ensure compliance with the following:

- (i) The wall shall follow the line of the existing property boundary with a grassed slope between the exposed face of the wall and the back of the verge.
- (ii) The wall shall have a stone masonry facing over its full exposed height. The stone masonry facing shall be constructed in accordance with BS 5628 and SHW Series 2400. The colour, size and shape, type and texture of the stones used shall match that of stone masonry walls in the local area. Stones shall be laid in a random rubble arrangement of either coursed or un-coursed construction to match that of stone masonry walls in the local area.

### **3.9 Structure PS21 – C127K Wester Ord to Blacktop Road Underbridge**

3.9.1 The Design for Structure PS21 shall ensure compliance with the following:

- (i) Bridge parapets of concrete construction shall be permitted and shall take the form defined on drawing B1033200/CD/DEF/ST/010.

### **3.10 Structure PS33 – North Kingswells Junction Underbridge**

3.10.1 The design for Structure PS33 shall ensure compliance with the following:

- (i) The use of full height abutments shall be permitted for this structure.

### **3.11 Structure PS38 – BP Pipeline Protection Structure**

- 3.11.1 The Design for Structure PS38 shall ensure compliance with the following:
- (i) The Company shall consult and comply with the requirements of BP.
  - (ii) The Company shall consider the effects of any adjacent cathodic protection systems in the BP apparatus on the structure and shall ensure that suitable measures are provided to prevent accelerated corrosion of the New Works structural elements.
  - (iii) Bridge parapets of concrete construction shall be permitted and shall take the form defined on drawing B1033200/CD/DEF/ST/010.
  - (iv) A bituminous footway construction, for New Access Road/Tracks and Accommodation Works Access Tracks as detailed in Schedule 2 Part 2 of this Agreement, shall be provided through the structure.

### **3.12 Structure PS39 – Shell Pipeline Protection and NMU Underpass**

- 3.12.1 The Design for Structure PS39 shall ensure compliance with the following:
- (i) The Company shall consult and comply with the requirements of Shell.
  - (ii) The Company shall consider the effects of any adjacent cathodic protection systems in the Shell apparatus on the structure and shall ensure that suitable measures are provided to prevent accelerated corrosion of the structural elements. .
  - (iii) The wingwalls shall be parallel to the road above.
  - (iv) Bridge parapets of concrete construction shall be permitted and shall take the form defined on drawing B1033200/CD/DEF/ST/010.
  - (v) A bituminous footway construction, for New Access Road/Tracks and Accommodation Works Access Tracks as detailed in Schedule 2 Part 2 of this Agreement, shall be provided through the structure. The footway material shall be a light silver grey granite colour.

### **3.13 Structure PS40 – Kirkhill Wildlife Overbridge**

- 3.13.1 The Design for Structure PS40 shall ensure compliance with the following:
- (i) The form of the structure shall adopt one of the acceptable Overbridge forms described in Section 2.7.18.2.
  - (ii) The plan arrangement of the landscaping shall be one of the acceptable plan arrangements shown on drawing B1033200/CD/DEF/ST/005.
  - (iii) The arrangement of the landscaping shall be one that provides a meandering pathway across the bridge by varying the profile of the topsoil across the bridge.
  - (iv) Below the topsoil a suitable arrangement shall be provided to maintain the growth of the landscaping. Below this, a root barrier system is required to protect the waterproofing membrane and structure.
  - (v) Hardened outer verges 0.6m wide shall be provided between the edges of the landscaping and the bridge parapets.
  - (vi) The bridge parapets shall be 1800mm high with solid infill panels 800mm high at the base with an open appearance above with mesh infill complying

with Section 2.6.8. Parapets shall extend at least two panels or six metres, whichever is the greater, beyond the top of the slope intersecting line.

### **3.14 Structure PS41 – Kirkhill Overbridge**

3.14.1 The Design for Structure PS41 shall ensure compliance with the following:

- (i) The form of the structure shall adopt one of the acceptable Overbridge forms described in Section 2.7.18.2.
- (ii) The structure shall be landscaped as per drawing B1033200/CD/DEF/ST/005.
- (iii) The arrangement of the landscaping shall be one that provides a meandering pathway across the bridge by varying the profile of the topsoil across the bridge.
- (iv) Below the topsoil a suitable arrangement shall be provided to maintain the growth of the landscaping. Below this, a root barrier system is required to protect the waterproofing membrane and structure.
- (v) The bridge parapets shall be 1800mm high with solid infill panels 800mm high at the base with an open appearance above with mesh infill complying with Section 2.6.8. Parapets shall extend at least two panels or six metres, whichever is the greater, beyond the top of the slope intersecting line

### **3.15 Structure PS41A – Bogenjoss Burn Underbridge**

3.15.1 The Design for Structure PS41A shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of SNH to ensure that the form of the structure allows sufficient ecological connectivity below the bridge.

### **3.16 Structure PS43 – Shell Pipeline Protection and Farm Underpass**

3.16.1 The Design for Structure PS43 shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of Shell.
- (ii) The Company shall consider the effects of any adjacent cathodic protection systems in the Shell apparatus on the structure and shall ensure that suitable measures are provided to prevent accelerated corrosion of the structural elements.
- (iii) The embankment between PS43 - Shell Pipeline Protection and Farm Underpass and PS44 - C55C Pitmedden Road Underbridge on the south side of the AWPR shall be retained in the design and appropriately landscaped.
- (iv) The wingwalls shall be parallel to the road over with the exception of the south west and north west wing walls. The north west wingwall shall continue to the edge of the farm access track and shall retain landscaped earthworks to provide visual screening to the structure. The farm access track shall be positioned as close to Pitmedden Road as possible.
- (v) Bridge parapets of concrete construction shall be permitted and shall take the form defined on drawing B1033200/CD/DEF/ST/010.

- (vi) A bituminous footway construction, for New Access Road/Tracks and Accommodation Works Access Tracks as detailed in Schedule 2 Part 2 of this Agreement, shall be provided through the structure and shall extend for a distance of 5 metres from the structure opening.
- (vii) The requirements of clause 2.12.2.21 a) shall not be applied to this Structure.

### **3.17 Structure PS44 – C55C Pitmedden Road Underbridge**

3.17.1 The Design for Structure PS44 shall ensure compliance with the following:

- (i) Bridge parapets of concrete construction shall be permitted and shall take the form defined on drawing B1033200/CD/DEF/ST/010.
- (ii) The slope and stone masonry apron beneath the structure shall be shaped locally at a gradient no steeper than 1v:2h at the north west corner of the structure such that the apron does not extend beyond the plan area of the deck above.

### **3.18 Structure PS45 – Aberdeen to Inverness Railway Underbridge**

3.18.1 The Design for Structure PS45 shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of Network Rail.
- (ii) Provision is to be made in the structure design for a future double track electrified railway, as directed by Network Rail.
- (iii) Bridge parapets of concrete construction shall be permitted and shall take the form defined on drawing B1033200/CD/DEF/ST/010.

### **3.19 Structure PS46 – River Don Crossing**

3.19.1 The design for Structure PS46 shall ensure compliance with the following:

- (i) The structure shall either take the form of a 5-span structure as defined in drawings B1033200/CD/DEF/ST/011, B1033200/CD/DEF/ST/012, B1033200/CD/DEF/ST/013 and B1033200/CD/DEF/ST/014 or a 3-span structure as defined in drawings B1033200/CD/DEF/ST/015, B1033200/CD/DEF/ST/016, B1033200/CD/DEF/ST/017, B1033200/CD/DEF/ST/023 and B1033200/CD/DEF/ST/024.
- (ii) The superstructure shall be of concrete construction.
- (iii) The parapets shall be H4a containment and shall be open steel post and rail type.
- (iv) Stainless steel reinforcement shall be provided in the parapet cope over the full length of the structure to remove the requirement for this area to be impregnated in accordance with the requirements of BD 43 of the DMRB.
- (v) The underside and inclined faces of the box and cantilever soffits of the central span between pier centres shall be excluded from the requirement to be impregnated in accordance with the requirements of BD 43 of the DMRB.
- (vi) The Company shall consider the effects of any adjacent cathodic protection systems in the BP apparatus on the structure and shall ensure

that suitable measures are provided to prevent accelerated corrosion of the structural elements.

### **3.20 Structure PS49 – Parkhill Aqueduct**

3.20.1 The Design for Structure PS49 shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of Historic Scotland.
- (ii) The structure shall take the form defined in drawing B1033200/CD/DEF/ST/018.
- (iii) The requirements of Section 2.7.6 do not apply to this structure.
- (iv) The structure shall be designed as a 'lightweight structure' in accordance with Eurocodes.
- (v) Suitable detailing and waterproofing shall be provided to prevent leakage from the water channel.
- (vi) Parapets shall extend at least two panels or six metres, whichever is the greater, beyond the top of the slope intersecting line

### **3.21 Structure PS52 – Formartine and Buchan Way NMU Underpass 1 (A947)**

3.21.1 The Design for Structure PS52 shall ensure compliance with the following:

- (i) The structure shall make provision for the re-opening of the disused railway as a single track electrified railway with NMU provision.
- (ii) Retaining walls with stone masonry facing shall be provided at the entrances to the structure in the arrangement defined on drawing B1033200/CD/DEF/ST/019. The stone masonry facing to the external retaining walls shall continue as stone masonry facing to the internal abutment walls 2.3m in height for the full length of the underpass. The stone masonry facing shall be constructed in accordance with BS 5628 and SHW Series 2400. The colour, size and shape, type and texture of the stones used shall match that of stone masonry walls in the local area. Stones shall be laid in a random rubble arrangement of either coursed or un-coursed construction to match that of stone masonry walls in the local area.
- (iii) The remaining exposed areas of concrete to the abutments and wingwalls shall be finished in accordance with Sections 2.8.5 and 2.8.6.
- (iv) Lighting shall be by means of uplighter luminaries positioned at ground level and at the top of the internal stone masonry facing.
- (v) The footway finish through the underpass shall be a light silver grey granite colour. Light silver grey granite colour gravel chippings shall be provided between footways and in the verges.
- (vi) The Company shall consult and comply with Aberdeenshire Council on the lighting and footway make-up requirements.

### **3.22 Structure PS55 – Formartine and Buchan Way NMU Underpass 2 (A90)**

3.22.1 The Design for Structure PS55 shall ensure compliance with the following:

Part 2 Specific Requirements

---

- (i) The structure shall make provision for the re-opening of the disused railway as a single track electrified railway with NMU provision.
- (ii) Retaining walls with stone masonry facing shall be provided at the entrances to the structure in the arrangement defined on drawing B1033200/CD/DEF/ST/020. The stone masonry facing to the external retaining walls shall continue as stone masonry facing to the internal abutment walls 2.3m in height for the full length of the underpass. The stone masonry facing shall be constructed in accordance with BS 5628 and SHW Series 2400. The colour, size and shape, type and texture of the stones used shall match that of stone masonry walls in the local area. Stones shall be laid in a random rubble arrangement of either coursed or un-coursed construction to match that of stone masonry walls in the local area.
- (iii) The remaining exposed areas of concrete to the abutments and wingwalls shall be finished in accordance with Sections 2.8.5 and 2.8.6.
- (iv) Lighting shall be by means of uplighter luminaires positioned at ground level and at the top of the internal stone masonry facing.
- (v) The footway finish through the underpass shall be a light silver grey granite colour. Light silver grey granite colour gravel chippings shall be provided between footways and in the verges.
- (vi) The Company shall consult and comply with Aberdeenshire Council on the footway make-up requirements.

**3.23 Structure PS58 – Lochgreens Access Road Overbridge**

3.23.1 The design for Structure PS58 shall ensure compliance with the following:

- (i) If intermediate pier columns are used for this structure they shall have a minimum distance of 2.5m between centres.

**3.24 Structure PS63 – Blameddie Junction Underbridge**

3.24.1 The design for Structure PS63 shall ensure compliance with the following:

- (i) The use of full height abutments shall be permitted for this structure.
- (ii) The wing walls for this structure may be parallel to the road over or splayed at 45 degrees.

**3.25 Structure PS64 – Kier Farm Underpass**

3.25.1 The design for Structure PS64 shall ensure compliance with the following:

- (i) The wing walls for this structure may be parallel to the road over or splayed at 45 degrees.
- (ii) The structure shall be treated as a farm underpass with respect to clause 2.12.2.21.

**3.26 Structure PS65 – South Orrock Farm Underpass**

3.26.1 The design for Structure PS65 shall ensure compliance with the following:

- (i) The wing walls for this structure may be parallel to the road over or splayed at 45 degrees.
- (ii) The structure shall be treated as a farm underpass with respect to clause 2.12.2.21.

### **3.27 Structure PS66 – Orrock Road Overbridge**

3.27.1 The design for Structure PS66 shall ensure compliance with the following:

- (i) The design of the structure shall make provision for the future widening of the carriageway over the structure from 5.5m to 7.3m wide. The widening of the carriageway shall be achieved by a reduction in both verge widths from 2.9m to 2.0m.

### **3.28 Structure PS67 – Dabrae Farm Underpass**

3.28.1 The design for Structure PS67 shall ensure compliance with the following:

- (i) The wing walls for this structure may be parallel to the road over or splayed at 45 degrees.

### **3.29 Structure PS68 – Aikenshill Farm Underpass**

3.29.1 The design for Structure PS68 shall ensure compliance with the following:

- (i) The wing walls for this structure may be parallel to the road over or splayed at 45 degrees.
- (ii) The structure shall be treated as a farm underpass with respect to clause 2.12.2.21.

### **3.30 Structure PS69A – Foveran Burn Underbridge**

3.30.1 The design for Structure PS69A shall ensure compliance with the following:

- (i) The wing walls for this structure may be parallel to the road over or splayed at 45 degrees.

### **3.31 Structure PS73 – Shell Pipeline Crossing Mainline**

3.31.1 The design for Structure PS73 shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of Shell.
- (ii) The Company shall consider the effects of any adjacent cathodic protection systems in the BP apparatus on the structure and shall ensure that suitable measures are provided to prevent accelerated corrosion of the structural elements.

### **3.32 Structure PS74 – Shell Pipeline Crossing Access Track**

3.32.1 The design for Structure PS74 shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of Shell.
- (ii) The Company shall consider the effects of any adjacent cathodic protection systems in the BP apparatus on the structure and shall ensure

that suitable measures are provided to prevent accelerated corrosion of the structural elements.

### **3.33 Structure PS75 – BP Pipeline Crossing Bridgend Access**

3.33.1 The design for Structure PS75 shall ensure compliance with the following:

- (i) The Company shall consult and comply with the requirements of BP.
- (ii) The Company shall consider the effects of any adjacent cathodic protection systems in the BP apparatus on the structure and shall ensure that suitable measures are provided to prevent accelerated corrosion of the structural elements.

**4 Not Used**

**This page is blank**

## Part 2 Specific Requirements

**5 Settlement****5.1 Design**

- 5.1.1 The Design shall pay due regard to the effects of settlement or heave.
- 5.1.2 Measures shall require to be taken by the Company to ensure that settlement and heave of embankments shall either be prevented or shall be substantially complete before the road pavement shall have been constructed. The Company shall demonstrate to the Contracting Authority's satisfaction that settlement of the founding stratum is substantially complete before the road pavement is constructed.
- 5.1.3 The following criteria shall apply:
- (i) Within 10 metres of the interface between Structures and adjacent embankments, the differential settlement or heave between any two points at any time within 60 months of Final Completion shall be no greater than;
    - (a) For any two points less than 1 metre apart, 5 millimetres;
    - (b) For any two points greater than 1 metre but less than 3 metres apart, 10 millimetres;
    - (c) For any two points greater than 3 metres but less than 6 metres apart, 15 millimetres;
    - (d) For any two points greater than 6 metres but less than 8 metres apart, 20 millimetres; and
    - (e) For any two points greater than 8 metres apart, 25 millimetres.
- 5.1.4 Over a distance of 50 metres back from any Structure the maximum permitted change in gradient, from the Design gradient monitored in accordance with Section 5.2 shall be 0.1 percent.
- 5.1.5 Where new construction imposes loads on existing embankments, pavements or Structures, appropriate measures shall be taken by the Company to prevent differential settlement or damage.
- 5.1.6 Differential settlements which adversely affect carriageway drainage shall not be acceptable in the New Works.
- 5.1.7 Notwithstanding the other provisions of this Section at any time within 60 months of Final Completion, the maximum permitted change in gradient from the Design gradient shall be 0.5 percent except for Accommodation Works Access Tracks where the maximum permitted change in gradient from the Design Gradient shall be 1.0 percent.
- 5.1.8 For the purposes of analysis the gradient shall be calculated using surveyed levels of the adjacent equally spaced control points.

**5.2 Instrumentation**

- 5.2.1 To monitor the settlement control points shall be attached to the pavement by the Company and levelled by them immediately after construction of the pavement and thereafter monthly for an initial period of six months.

Part 2 Specific Requirements

---

The Company shall continue to monitor settlement on a monthly basis until such time as settlement trends have been established and significant movements have ceased.

- 5.2.2 The control points shall be installed at the following locations, referenced to Ordnance Survey datum, and appropriate Design chainages:
- (i) all embankments of height greater than 3 metres: control points shall be installed in the pavement at 10 metre intervals on both edges of the carriageway and on the centreline;
  - (ii) within 10 metres of the interface between Structures and approach embankments: control points shall be installed in the pavement at 10 metres intervals on both edges of the carriageway and on the centre line;
  - (iii) behind Structures: control points shall be installed in the pavement at 5 metre intervals on both edges of the carriageway and on the centre line, over a distance of 50 metres.
  - (iv) where new construction crosses ground where ground improvement has been carried out: control points shall be installed in the pavement at five metre intervals on both edges of the carriageway and on the centre line, over a distance of the ground improvement works plus 50 metres.
  - (v) where new construction incorporates soil reinforcement, including geogrid: control points shall be installed in the pavement at five metre intervals on both edges of the carriageway and on the centre line, over a distance of the soil reinforcement works plus 50 metres.
- 5.2.3 The centreline control points shall be levelled until the carriageway is opened, and thereafter only when the edge control points indicate significant level changes, or as otherwise directed by the Contracting Authority.
- 5.2.4 The Company shall submit to the Contracting Authority the results of the monitoring within one week of the measurements having been taken.
- 5.2.5 Notwithstanding the requirements of paragraph 5.2.1, the Company shall take all measures to identify the area over which any remedial measures are required due to unacceptable differential settlements.
- 5.2.6 To demonstrate substantial completion of the founding stratum prior to construction of the road pavement, the Company shall install and monitor control points on earthworks at equivalent locations to those noted in paragraph 5.2.2.

## **6 Environment, Landscape and Ecology**

### **6.1 Design and Mitigation: General**

- 6.1.1 The Company shall ensure that the New Works are designed and constructed to mitigate and/or minimise adverse environmental impacts such that in the opinion of the Contracting Authority they are clearly and demonstrably not greater than those identified in the Environmental Assessment Documents contained in Schedule 8 to the Agreement
- 6.1.2 The Environmental Assessment Documents contained in Schedule 8 to the Agreement also include background surveys, reports and assessments which the Company shall take full account of in the Design, construction and completion of the New Works.
- 6.1.3 Subject to the other provisions of this Agreement, the Design shall include environmental, landscape and ecology mitigation measures in accordance with these New Works Requirements. In carrying out the Design, construction and completion of the New Works the Company shall note that the documents which form the Environmental Assessment Documents have been produced over a period of time in response to a particular highway design and policy current at the time of publication, and in response to additional information becoming available. The requirements in the Environmental Assessment Documents may not therefore satisfy current best practice. In the event of a conflict between the Environmental Assessment Documents and this Part 2 of these New Works Requirements, the New Works Requirements shall prevail.
- 6.1.4 The Company shall employ suitably qualified and experienced specialist environmental personnel to undertake all necessary environmental activities. These activities shall include, but not be limited to:
- (i) Coordination of environmental issues associated with all aspects of the Design, construction and completion of the New Works;
  - (ii) Integration of environmental Design and environmental mitigation measures as appropriate in the Design, construction and completion of the New Works, including preparation of method statements for construction works; and
  - (iii) Undertaking consultation with statutory and non-statutory consultees as appropriate in respect of environmental issues related to the Design, construction and completion of the New Works.

### **6.2 Design and Mitigation: Methodologies**

- 6.2.1 The Design shall ensure that all measures shall be taken to protect the environment and control pollution in accordance with all statutory requirements and those of this Agreement. Environmental mitigation measures and the landscape Design shall be in accordance with Legislation and current good practice guidelines within Scotland.

### **6.3 Environmental Liaison Group (“ELG”)**

- 6.3.1 The Company shall form an Environmental Liaison Group (“ELG”) for the project which shall include representatives from the Contracting Authority, SNH, SEPA, Historic Scotland, Aberdeen City Council, Aberdeenshire Council and other relevant

---

**Part 2 Specific Requirements**

---

organisations. The Company shall advise the members of the ELG as to future construction activities and compliance with Environmental Assessment Documents. The Contracting Authority shall chair the meetings and the ELG shall meet at monthly intervals as a minimum, with more frequent meetings being held as required to discuss specific issues.

- 6.3.2 The Company shall prepare the agenda for the ELG meetings, which shall be submitted to the Contracting Authority for approval at least seven days prior to the ELG meeting taking place.
- 6.3.3 The Company shall supply formal minutes of all discussions and actions arising from the ELG meetings, for agreement with Contracting Authority, within 48 hours of the relevant meeting having taken place. The Company shall issue a copy of the agreed minutes to the ELG for review at its next meeting.

## **6.4 Cultural Heritage**

- 6.4.1 The Company shall consult and comply with the requirements of Historic Scotland in respect of any sites of archaeological interest or archaeological remains which are likely to be affected by the New Works, including the landscape Design.

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- 6.4.2 The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to minimising disturbance to cultural heritage interests in accordance with these New Works Requirements and the Environmental Assessment Documents.
- 6.4.3 The Company shall ensure that scheduled monuments, listed buildings, and archaeological sites and any other sites of archaeological interest or archaeological remains identified as requiring protection by Historic Scotland within the vicinity of the New Works Site shall not be adversely affected by the Design, construction and completion of the New Works without written consent from Historic Scotland.
- 6.4.4 The Company shall undertake an archaeological watching brief and all archaeological works relating to the New Works including but not limited to, fieldwork, post-excavation work, mitigation design and implementation, reporting, archiving and publication.

Part 2 Specific Requirements

---

- 6.4.5 The archaeological watching brief shall be undertaken during the removal of topsoil, soil or any other overburden which may obscure archaeological remains within the New Works Site.
- 6.4.6 The purpose of the archaeological watching brief shall be to investigate and record any archaeological remains encountered.
- 6.4.7 In the event of archaeological remains being discovered during the archaeological watching brief, or at any other time during the New Works, the Company shall cease the stripping of topsoil, soil or any other overburden and otherwise or excavation work or construction work in the vicinity, erect temporary fencing around the remains, and immediately inform the Contracting Authority and Historic Scotland.
- 6.4.8 The Company shall not carry out any further works within the fenced off area until written approval to do so has been given by Historic Scotland.
- 6.4.9 Any features of possible archaeological interest discovered during the archaeological watching brief or at any other time during the New Works shall be recorded in accordance with Institute for Field Archaeologists and Historic Scotland guidelines.
- 6.4.10 Where the need for archaeological mitigation measures is identified, the Company shall submit a mitigation proposal report to the Contracting Authority and Historic Scotland detailing the mitigation proposed.
- 6.4.11 Following written agreement of such with the Contracting Authority and Historic Scotland, the Company shall undertake all mitigation measures in accordance with the requirements of Historic Scotland, including inter alia the storage of archaeological finds. The upright stones at Kirkhill and Overhill shall be relocated prior to site clearance in consultation with the Contracting Authority and Historic Scotland.
- 6.4.12 On completion of all fieldwork, the Company shall submit a brief report to Discovery and Excavation in Scotland (DES) and prepare a post-excavation assessment report. The post-excavation assessment report shall include proposals for specialist analysis, processing, conservation, storage of finds and samples and reporting.
- 6.4.13 Within twelve months of receiving written agreement from Historic Scotland for the post-excavation report the Company shall undertake specialist analysis, processing, conservation, storage of finds, samples and reporting.
- 6.4.14 The Company shall prepare a final report detailing the results of all archaeological works undertaken including all specialist reporting, post excavation analysis and conclusions shall be produced. If required the Company shall submit a separate report suitable for publication in an appropriate archaeological journal or series.
- 6.4.15 The Company shall submit a digital copy of all final and specialist reports to the National Monuments Record of Scotland within 12 months of their acceptance by Historic Scotland.
- 6.4.16 The Company shall, as soon as possible after the completion of all reporting prepare an archive and procure the deposition and long-term storage of each archive in the National Monuments Record of Scotland (NMRS).

## 6.5 Ecology and Nature Conservation

6.5.1 The Company shall implement all ecological mitigation measures identified in the Environmental Assessment Documents contained in Schedule 8 of the Agreement and as required under protected species licence conditions.

6.5.2 The Company shall consult and comply with the requirements of Scottish Natural Heritage in respect of any species or sites protected by legislation, protected species licences or scheduled for protection which are likely to be affected by the New Works, including any hard and soft landscaping.

Direct Dial [REDACTED]

[REDACTED]@snh.gov.uk

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement and shall comply with the conditions of all current licences which relate to protected species.

6.5.3 The Company shall obtain all necessary licences required in relation to species protected by legislation.

6.5.4 The Company shall be responsible for ensuring that all legislation with regard to ecology and nature conservation is strictly adhered to.

6.5.5 Before the commencement of any New Works the Company shall consult and comply with Scottish Natural Heritage and shall carry out surveys of plants and animals protected by legislation, which may be directly or indirectly affected by the New Works, in accordance with their requirements.

6.5.6 The Company shall consult and comply with Scottish Natural Heritage and shall carry out surveys for invasive plants which may directly or indirectly affected the New Works.

6.5.7 The surveys shall be undertaken by suitably qualified and experienced specialists.

6.5.8 Where surveys indicate that mitigation measures, in addition to those identified in the Environmental Assessment Documents or as part of protected species licensing conditions, are required, these shall be agreed with Scottish Natural Heritage. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

6.5.9 Following the surveys detailed in paragraphs 6.5.5 and 6.5.6 ,the Company shall provide the Contracting Authority with details of their proposals for mitigation measures which may include, but shall not be limited to:

- (i) protection during construction of features of ecological interest;

Part 2 Specific Requirements

---

- (ii) wildlife fencing, tunnels, mammal ledges in culverts or one-way gates to allow the passage of mammals including, but not limited to, badgers and otters;
  - (iii) fencing to direct fauna towards tunnels at appropriate hazardous road crossing points;
  - (iv) wildlife habitat creation, enhancement and management; and
  - (v) a programme of post works monitoring of protected species and mitigation.
- 6.5.10 If Scottish Natural Heritage requires that certain habitats and species are protected during New Works construction, the Company shall design and programme the New Works so that disturbance to the habitat of those species is avoided.
- In addition:
- (i) The Company's Construction Programme shall clearly indicate the programmed time for removal of existing vegetation and areas to be removed; and
  - (ii) the Company shall take due cognisance in the Design, construction and programming of the New Works with respect to minimising disturbance to wildlife and wildlife habitat. Particular attention shall be given to the protection of existing areas of semi-natural vegetation.
- 6.5.11 Where required by Scottish Natural Heritage the Design shall include, but shall not be limited to:
- (i) Culverts designed to allow the free passage of mammals and/or fish; and
  - (ii) Additional dry pipe crossings in locations and to layouts which shall encourage their use by mammals as far as is reasonably possible.
- 6.5.12 The Design shall include ecological impact mitigation and habitat creation associated with riparian corridors affected by the proposals.
- 6.5.13 Bats
- The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding significant negative impacts on local roosting bat populations.
- 6.5.14 Badgers
- The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to badger setts and significant negative impacts on local badger populations.
- 6.5.15 Red Squirrels
- The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to red squirrel dreys and significant negative impacts on local red squirrel populations.
- 6.5.16 Pine Martens
- The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to pine marten nests or dens and significant negative impacts on local pine marten populations.

Part 2 Specific Requirements

---

## 6.5.17 Otters

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to otter holts and significant negative impacts on local otter populations. The Company shall also comply with the requirements of paragraph 1.3.4 (ii) of this Part 2 in respect of fencing requirements around SUDS storage, attenuation or settlements ponds.

## 6.5.18 Water Voles

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to water voles, their habitat and significant negative impacts on local water vole populations.

The Company shall ensure that water vole habitat areas created as mitigation under advanced works contracts are not impacted by the New Works.

## 6.5.19 Breeding Birds

The Design, construction and completion of the New Works shall include the protection of birds during the breeding season which is typically between March 1st and August 31st but in some instances may vary.

## 6.5.20 Amphibians

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding impact on amphibians including, but not limited to great crested newts. The Design of the storage, attenuation or settlement ponds and otherwise and modification of watercourses shall take into account habitat requirements of amphibians.

The Company shall ensure that ponds created as mitigation under advanced works contracts are not impacted by the New Works.

## 6.5.21 Reptiles

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding impact on reptiles and significant negative impacts on local reptile populations.

## 6.5.22 Freshwater pearl mussels

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to freshwater pearl mussels, their habitat and significant negative impacts on their populations.

## 6.5.23 Fish and Freshwater Habitat

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to avoiding disturbance to fish, including Atlantic salmon, and freshwater habitat.

## 6.5.24 River Dee Special Area of Conservation (SAC)

The Company shall take due cognisance in the Design, construction and completion of the New Works with respect to the designation of the River Dee and certain of its tributaries as a SAC. The Company shall undertake works within the environs of the SAC in strict compliance with the requirements of:

---

**Part 2 Specific Requirements**

---

- (i) the Appropriate Assessment undertaken in respect of the implications of the proposed Aberdeen Western Peripheral Route (AWPR) upon the River Dee Special Area of Conservation (SAC);
- (ii) the advice provided by Scottish Natural Heritage (SNH) to Transport Scotland in its letter dated 8th August 2008, and as a written submission dated 12<sup>th</sup> August 2008 to the Public Local Inquiry held in respect of the Aberdeen Western Peripheral Route; and
- (iii) the Report to Inform an Appropriate Assessment for the River Dee SAC.

**6.6 Air Quality and Dust**

6.6.1 The Company shall consult and comply with the requirements of Aberdeen City Council Environmental Health Officer (Contact Tel: 01224 523737) and Aberdeenshire Council Environmental Health Officer (Contact Tel: 08456 081207) as appropriate, with respect to air quality and dust emissions.

6.6.2 The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

6.6.3 The Design shall ensure that all necessary measures shall be implemented to reduce airborne dust levels as far as is possible and to prevent damage, loss, injury or nuisance caused by dust at all times during the construction and completion of the New Works.

6.6.4 Such measures may include but shall not be restricted to:

- (i) use of water sprays;
- (ii) sheeting of vehicles carrying material which may give rise to wind blown dust;
- (iii) enforcement of speed limits on haul roads and unmade roads;
- (iv) avoiding dust generating activities in conditions likely to cause nuisance;
- (v) provision of windbreaks where appropriate;
- (vi) minimising drop heights;
- (vii) switching off machinery not in use;
- (viii) equipment and internal road maintenance;
- (ix) control of stockpiled materials;
- (x) planting over stored materials where appropriate; and
- (xi) avoiding/preventing build-up of mud on roads by measures such as wheel washing.

6.6.5 Notwithstanding any other provisions of this Agreement, the Company shall produce method statements for handling dust and preventing dust spreading to adjacent communities during the construction of the New Works.

**6.7 Water Quality and Drainage**

6.7.1 The Company shall comply with the requirements of the Water Environment (Controlled Activities) (Scotland) Regulations 2011 (CAR).

Part 2 Specific Requirements

---

The Company shall consult and comply with the requirements of SEPA regarding water quality and drainage, including drainage outfalls, culverts, pollution control measures, flood prevention and the use of herbicides and other potentially polluting chemicals in proximity to watercourses.

Contact:

[REDACTED],  
SEPA – Aberdeen Office,  
Inverdee House,  
Baxter Street,  
Torry,  
Aberdeen, AB11 9QA

Tel: 01224 266 600

Fax: 01224 896 657

The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

- 6.7.2 All culverts shall be designed in accordance with CIRIA Report C689 Culvert Design and Operation Guide (2010) and SEPA guidance Engineering in the Water Environment Good Practice Guide, River Crossings, 2<sup>nd</sup> edition (SEPA, 2010) and subject to the requirements of section 1.5.6 of this Part 2.
- 6.7.3 The design of all culverts on watercourses shall encourage use by wildlife such that all fish species and mammals associated with the watercourse may pass freely through the culvert. Culverts shall be designed to operate under sub-critical, free flow conditions. Bends, steps, changes in culvert slope and cross section shall not be permitted in the design of any culvert.
- 6.7.4 The Design shall minimise changes to the existing drainage patterns within the topography of the New Works Site.
- 6.7.5 Particular care shall be taken during construction and completion of the New Works over or adjacent to watercourses, channel habitats, and local drainage systems to ensure minimal disturbance to the banks and beds of watercourses, biological parameters including protected species and existing land drainage systems during, but not limited to, the construction of SUDS, culverts, watercourse crossings or diversions.
- 6.7.6 Subject to the other provisions of this Agreement, surface water runoff from all roads detailed in Table 1 of Schedule 19 of the Agreement, including associated cuttings and embankments, shall be carried to storage, attenuation or settlement ponds or otherwise, wherever possible.
- 6.7.7 The Design shall ensure that water tables shall be maintained, as far as possible, and shall not be artificially lowered, to ensure that the flora and fauna adjacent to the New Works Site shall not be adversely affected.
- 6.7.8 The Design shall ensure that all water (as defined in CAR) and other watercourses within and adjacent to the New Works Site are identified and monitored for quality of water, prior to any New Works and during construction and completion of the New Works. The Company shall consult with SEPA regarding water quality monitoring requirements.

## Part 2 Specific Requirements

- 
- 6.7.9 The Design shall ensure that the containment, treatment and disposal of surface water run-off from all roads detailed in Table 1 of Schedule 19 of the Agreement or groundwater produced by the New Works prevents any contaminants entering and polluting controlled waters (as defined in CAR) and the drainage system.
- 6.7.10 All detention basins, swales, trenches and the like shall be sized in accordance with CIRIA Report C697 The SUDS Manual in order to allow settlement for pollution removal purposes. The Company shall consult with SEPA regarding temporary and permanent SUDS provision.
- 6.7.11 The Design shall ensure that reasonable care shall be taken in the use and storage of potentially polluting chemicals and materials to minimise the risk of spillage or release into watercourses, ditches or surface drains.
- 6.7.12 The Design shall ensure that diversions for Undertakers and owners of private Apparatus shall be undertaken in a manner which shall minimise the risk of spillage or release into watercourses, ditches or surface drains.
- 6.7.13 Storage, attenuation or settlement ponds or otherwise, required as part of the road drainage system, shall:
- The Design shall ensure that all settlement, attenuation and storage ponds and otherwise shall
- (i) be designed to integrate with the surrounding landscape and provide habitat for wildlife;
  - (ii) be sited within naturally low lying areas and have surrounding earthworks with smooth flowing contours to integrate naturalistically with the surrounding landform, other than where SuDS ponds are specifically intended to provide a formal landscape feature;
  - (iii) avoid abrupt changes in slope, sharp angles and steep side slopes;
  - (iv) have fencing which shall be as unobtrusive as possible, with the fence type and alignment designed to minimise visual impact;
  - (v) have planting to help screen fencing, outfall and inlet structures, enhance wildlife habitat and provide visual interest;
  - (vi) have adjacent open ground around the storage, attenuation or settlement ponds or otherwise seeded with semi-natural vegetation/wildflowers to provide added wildlife habitat and visual interest; and
  - (vii) have ledges within ponds within the zone between 0m and 0.5 metres below average water level which shall be planted with native species emergent aquatic vegetation to provide wildlife habitat and visual interest and discourage public access to the water.
- 6.7.14 Outfalls to watercourses in the Works shall be designed in accordance with Engineering in the Water Environment Good Practice Guide, Intakes and outfalls (SEPA, 2008).
- 6.7.15 The Company shall ensure that run-off from any road shall not increase the risk of flooding downstream of the point of discharge.
- 6.7.16 The Company shall ensure that any excess runoff from the carriageway drainage shall be directed away from areas at risk of flooding towards areas of detention.

## Part 2 Specific Requirements

6.7.17 Where structures or embankments are to be constructed within the floodplain, the Company shall consult and comply with the requirements of SEPA

## 6.8 Private Water Supplies (PWS)

6.8.1 A number of PWS have been recorded in the proximity of the New Works which have been subject to risk screening and assessment as summarised in Appendix N.

6.8.2 As a result of the screening processes a number of PWS have been identified which will or may be affected by the New Works. However the Company shall be aware that there may be other PWS which have not been recorded or that additional PWS have been identified that may be affected by the New Works.

6.8.3 The Company shall undertake the Design, construction and completion of the New Works so as to minimise the risk of impacts to existing PWS, so far as is practicable, both during construction and following Final Completion. Prior to commencing construction the Company shall update the screening of PWS in respect of their Design and identify any changes in mitigation measures required as a consequence of the updated screening.

6.8.4 The Company shall prepare a method statement in accordance with Appendix N to describe the procedures to be implemented to ensure that a water supply is maintained. The method statement shall be submitted prior to construction commencement for approval by the Contracting Authority and shall be incorporated into the Programme for the New Works.

6.8.5 Should any impact to PWS be identified the Company shall undertake all necessary mitigation measures identified through the screening processes as detailed in Appendix N. The mitigation measures comprise:

- (i) PWS which shall be connected to a public water mains supply
- (ii) PWS for which replacement shall be attempted;
- (iii) PWS for which monitoring shall be undertaken during and after construction of the New Works and, if permanently impacted, replacement shall be attempted; and
- (iv) PWS for which monitoring shall be undertaken during and after construction of the New Works and, if permanently impacted, the PWS shall be connected to a public water mains supply.

The Company shall allow for two attempts at PWS replacement to provide a suitable and sustainable PWS. The programme and locations for PWS replacement shall minimise the requirements for temporary water supplies and minimise disruption to landowners. Should replacement not provide a suitable and sustainable PWS as compared to the 12 month pre-construction monitoring, connection to a public water mains supply shall be undertaken by the Company.

6.8.6 The Company shall have regard to the current guidance and requirements where the Company is required to obtain CAR Licences.

6.8.7 Monitoring shall be carried out by others at a number of the PWS for a period of 12 months prior to construction. This data shall be made available to the Company on completion of this period of monitoring. The Company shall take account of any additional occupancy information provided by landowners, to complement consumption recorded in the monitoring results. This pre-construction monitoring

Part 2 Specific Requirements

---

- work shall include the installation of monitoring equipment for adoption and use by the Company.
- 6.8.8 The Company shall be responsible for undertaking further monitoring at relevant PWS locations and/or relevant ground investigation locations. The arrangements for further monitoring shall be subject to approval by the Contracting Authority. This monitoring shall include hydrogeological flow and hydrogeological water quality monitoring for the periods and at the minimum number of locations detailed in Appendix N as a minimum.
- 6.8.9 The monitoring shall comprise monthly site visits to each monitoring equipment installation to download recorded data, undertake in-situ water quality testing, recover samples for analytical testing in a UKAS accredited laboratory (appointed by the Company) and check that all equipment is functioning correctly. The Company shall provide monitoring data following each event in accordance with the requirements detailed in Appendix N.
- 6.8.10 The Company shall maintain monitoring of those existing and replacement PWS locations for a minimum period of 1 year post Final Completion of the New Works. The Company shall take account of groundwater intercepted during the construction of the New Works to inform the development of PWS monitoring requirements for post Final Completion of the New Works. Within one month of the completion of this monitoring period, the Company shall prepare and issue to the Contracting Authority for approval an interpretive report detailing all monitoring undertaken, any variances to the pre-construction conditions, and any changes to conditions monitored in advance of construction of the New Works.
- 6.8.11 The Company shall follow the relevant guidance including, but not limited to, that identified in Appendix N.
- 6.8.12 The Company shall protect or divert PWS pipe networks intercepted by the New Works in areas of embankment during the construction as detailed in Appendix N. The PWS diversion design shall maintain the supply requirements for each PWS system. The protection of PWS pipe networks shall also ensure long term protection against damage due to the weight of embankments causing distortion, leaking or collapse to such networks.
- 6.8.13 The effects of blasting on PWS shall be assessed and the Company shall produce method statements for the approval of the Contracting Authority prior to construction commencement to include measures to avoid damage to PWS by vibration effects and fracturing.
- 6.8.14 The Company shall decommission monitoring equipment, installed by others, on completion of the relevant monitoring period. The decommissioning programme shall be based on the monitoring requirements for each PWS. The decommissioned monitoring equipment shall be removed and suitably disposed of by the Company. The monitoring locations shall be reinstated to a suitable condition to reflect the surrounding ground conditions as agreed with landowners.

## Part 2 Specific Requirements

**6.9 Hydrogeological and Hydrological Monitoring of Sensitive Environmental Sites (SES)**

- 6.9.1 The design of the New Works shall ensure that no adverse impact occurs as a result of the Design, construction and completion of the New Works to the following Sensitive Environmental Sites/ ecological sites:
- (i) Corby Loch and Lily Loch;
  - (ii) Hare Moss; and
  - (iii) Fishermyme Wetland.
- 6.9.2 Groundwater and surface water monitoring shall be carried out at the SES by others for a period of 12 months prior to construction. This data shall be made available to the Company on completion of this period of monitoring.
- 6.9.3 The design of the New Works shall ensure the continuation of groundwater and surface water monitoring in relation to these sites using previously installed monitoring equipment during the construction of the New Works and for a minimum 12 month period post Final Completion of the New Works in accordance with the requirements of Appendix P. Within one month of the completion of this monitoring period, the Company shall prepare and issue to the Contracting Authority for approval an interpretive report detailing all monitoring undertaken, any variances to the pre-construction conditions, and any changes to conditions monitored in advance of construction of the New Works.
- 6.9.4 Monitoring shall include continuous flow/ level monitoring and recording using dataloggers of surface water levels in open channels, water levels in lochs, groundwater levels in standpipes and rainfall in rain gauges. The monitoring shall also include water quality monitoring comprising field and analytical laboratory testing.
- 6.9.5 The Company shall provide a method statement that describes all activities, including but not limited to, monthly programming of site visits to each monitoring equipment installation to download recorded data, taking in-situ water quality testing and level readings, recovering water samples for analytical laboratory testing and checking that all equipment is functioning correctly. The method statement shall also include procedures to be implemented should the monitoring detect any adverse impact at any of the sites.
- 6.9.6 The Company shall decommission monitoring equipment, installed by others, on completion of the relevant monitoring period. The decommissioning programme shall be based on the monitoring requirements for each SES. The decommissioned monitoring equipment shall be removed and suitably disposed of by the Company. The monitoring locations shall be reinstated to a suitable condition to reflect the surrounding ground conditions as agreed with landowners.

**6.10 Groundwater**

- 6.10.1 The Company shall provide a method statement for monitoring groundwater for approval by the Contracting Authority. The method statement shall include a groundwater monitoring programme for the construction phase which shall:
- (i) Provide an overview of groundwater levels and quality along the full extent of the proposed scheme for the duration of the construction;

---

**Part 2 Specific Requirements**

---

- (ii) Provide local groundwater monitoring information on levels and quality in vicinity of identified PWS receptors; and
  - (iii) Provide local groundwater quality monitoring where potentially contaminated groundwater could be redirected as a result of road cuttings.
- 6.10.2 Groundwater monitoring instrumentation installed during the previous phases of ground investigation, outwith the footprint of the New Works, may be available for use in support of the requirements of 6.10.1. However, where this is not available, or is not suitable for monitoring purposes, the Company shall install new groundwater monitoring instrumentation in locations to be identified within the New Works area as part of the mitigation requirements as described in Clause 6.10.1.
- 6.10.3 The Company shall maintain and keep all groundwater monitoring instrumentation accessible throughout the execution and completion of the Works. Any instrumentation found to be damaged or defective shall be repaired or replaced by the Company as soon as practicable.
- 6.10.4 All boreholes with monitoring wells that are no longer required, including those in dry condition, shall be decommissioned by the Company in accordance with the requirements of the Water Environment (Controlled Activities) (Scotland) Regulations 2005 (CAR) and SEPA guidance on “Decommissioning Redundant Boreholes and Wells”.
- 6.10.5 The Company shall comply with all groundwater abstraction CAR Licence Terms and Conditions for road cuttings expected to intercept groundwater as listed in Schedule 8 of the Agreement

**6.11 Planning and Land Use**

- 6.11.1 The Company shall consult and comply with the requirements of:

- (i) Aberdeen City Council; and
- (ii) Aberdeenshire Council.

as appropriate in respect of planning policies and any statutory planning consents required in respect of the Design, construction and completion of the New Works. All other statutory or other approvals required in respect of the Design shall be complied with and obtained by the Company. The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

**6.12 Traffic Noise and Vibration**

- 6.12.1 The Company shall consult and comply with the requirements of Aberdeen City Council Environmental Health Officer (Contact Tel: 01224 523737) and Aberdeenshire Council Environmental Health Officer (Contact Tel: 08456 081207) with regard to construction noise levels.
- 6.12.2 The Company shall comply with the recommendations for practical measures to reduce noise set out in BS 5228 (all parts) and with Appendix 1/9 to the Specification.
- 6.12.3 The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.

---

**Part 2 Specific Requirements**

---

- 6.12.4 The Environmental Assessment Documents set out predicted noise levels due to road traffic both in the absence of mitigation and in the presence of mitigation measures. The Company shall provide noise mitigation measures which shall, as a minimum, provide the same beneficial effects at all affected receptor locations as the mitigation measures specified in the Environmental Assessment Documents.
- 6.12.5 The Company shall provide evidence to demonstrate the predicted effectiveness of its proposed noise mitigation measures prior to the commencement of construction of these elements in respect of the requirement specified in section 6.12.4.
- 6.12.6 A post construction noise assessment shall be undertaken by an appropriately qualified acoustician, appointed by the Company, who shall be a member of the Institute of Acoustics. This assessment shall be undertaken within three months of Final Completion. The assessment shall evaluate the actual effectiveness of the as constructed noise mitigation measures in providing beneficial effects at all affected receptor locations.
- 6.12.7 In the event that the effectiveness of the as constructed noise mitigation measures is found to be less than that predicted by the Company in accordance with section 6.12.5, the Company shall Design and construct suitable further noise mitigation measures to provide the level of benefit predicted in accordance with section 6.12.5.
- 6.12.8 The Company shall note that the required noise mitigation measures shall include those measures set out in the joint statement between Transport Scotland and Camphill Communities in relation to the Aberdeen Western Peripheral Route dated 21st January 2009.
- 6.12.9 The Design shall incorporate a noise barrier of appropriate design on each side of the road where it crosses Dambrae Underbridge, tapered into the false cuttings and noise barriers to the north and south of the structure.

**6.13 Landform and Grading Design Requirements****6.13.1 General**

- (i) As a minimum the landform and grading Design shall comply with the Indicative Landscape Design Drawings as listed in Appendix 0/4 to Part 4 of Schedule 2 of these New Works Requirements and be fully integrated with the planting Design, meet with the other landscape Design requirements contained in these New Works Requirements and shall be in accordance with the Environmental Assessment Documents.
- (ii) The landform design shall achieve integration with the surrounding local landscape to reduce adverse landscape and visual impacts as follows:
- (a) Grading out of side slopes to allow a smooth transition into the adjoining landforms, as indicated on the Indicative Landscape Design Drawings;
- (b) Creation of smooth flowing landforms which reflect the existing naturally occurring topography within the local landscape character area as identified in the Environmental Assessment Documents, in terms of gradients, scale and form;
- (c) Integration with existing ground levels, structures and planting;

## Part 2 Specific Requirements

- (d) Creation of slope gradients which allow for re-establishment of suitable ground conditions where establishment of semi-natural vegetation is required by the Design;
  - (e) Creation of bunding and false cuttings for noise attenuation and to screen views of the roads as detailed in Section 6.14 and traffic from adjacent visual receptors; and
  - (f) Taking opportunities to grade out embankment and cutting slopes to more closely resemble the surrounding natural topography and allow return of land to agricultural use if required.
- (iii) The specific requirements for landform design and construction shall achieve the following:
- (a) Back slopes on false cuttings shall be generally not steeper than 1:4 using material excavated from the New Works;
  - (b) False cuttings shall have gently tapering end slopes no steeper than 1:7, subject to other provisions of these New Works Requirements;
  - (c) All other landscape earthworks shall generally be no steeper than 1:6;
  - (d) Where land may be returned to the landowner graded out slopes shall be prepared and seeded in accordance with the Indicative Landscape Design; and
  - (e) Where reinforced soil slopes are adopted in the Design hard facings shall not be permitted and the slopes shall be vegetated to minimise visual impact.
- (iv) The design of the New Works shall include the rounding off at the top and bottom of embankments and cuttings as specified in Section 1.6.

## 6.14 Earthworks Bunds / False Cuttings

- 6.14.1 Earthwork bunds/false cuttings shall be constructed as shown on the Indicative Landscape Design Drawings as listed in Appendix 0/4 to Part 4 of Schedule 2 within the Land Made Available by the Scottish Ministers for the New Works, to maximise the earthwork bunds' mitigating effects in terms of reducing noise and or visual impacts to the adjacent locations, including garden areas and the living space of houses.
- 6.14.2 Earthwork bunds/false cuttings shall be designed and constructed in accordance with HA65 of the DMRB.
- 6.14.3 Where the location, dimensions and slope gradients of earthworks bunds and false cuttings differ in the Final Design from those in the Indicative Design, the Company shall demonstrate that the Design fully meets the relevant landscape and visual mitigation commitments set out in the Environmental Assessment Documents. For Balmedie - Tipperty the dimensions for bunds and false cuttings shall be adhered to without variation in the Design to ensure that commitments given during scheme promotion statutory processes to balance visual, aesthetic and acoustic mitigation are delivered.

Part 2 Specific Requirements

---

**6.15 Additional Landform Integration**

- 6.15.1 In addition to the landform and grading Design shown on the Indicative Landscape Design Drawings the Company may also carry out additional landform Design through raising existing ground levels in the locations, shown on the Indicative Landscape Design drawings. Any such modifications shall meet the general requirements set out in section 6.13.1 (ii), (iii) and (iv).
- 6.15.2 The general requirements for landform Design shall achieve the following:
- (i) the creation of smooth flowing contours which reflect, and which are in character with the existing naturally occurring topography (within the local landscape character area as identified in the Environmental Assessment Documents) in terms of gradients, scale and form;
  - (ii) Integration with existing ground levels, structures and planting;
  - (iii) The tops and bottoms of embankments and cuttings in soft materials shall be rounded as specified in Section 1.6;
  - (iv) Creation of slope gradients which allow for re-establishment of suitable ground conditions where establishment of semi-natural vegetation is required by the Design;
  - (v) creation of bunding and false cuttings for noise attenuation and to screen views of the roads as detailed in Section 6.10 and traffic from adjacent visual receptors; and
  - (vi) All opportunities shall be taken to grade out embankment and cutting slopes to more closely resemble the surrounding natural topography and allow return of land to agricultural use if required.

**6.16 Rock Cuttings: Environmental Design Requirements**

- 6.16.1 Subject to the other provisions of the New Works Requirements new rock cuttings shall be formed to promote a natural appearance and natural regeneration, as far as possible, in line with ongoing slope stability.
- 6.16.2 Irrespective of the techniques used for excavation of rock cuttings, the design of the Works shall achieve aesthetic objectives which avoid or reduce adverse landscape and visual impacts as follows:
- (i) where it is necessary to safeguard the road against rock falls, consideration shall first be given to providing a wider verge. Rock traps shall be used where this is not possible. Netting of rock faces shall be avoided;
  - (ii) opportunities to exploit the discontinuities and character of the natural rock mass, incorporating ledges and niches so as to achieve as natural an appearance as possible, reflecting naturally occurring rock formations, strata and rugged terrain in the local area shall be considered;
  - (iii) regularly spaced 'half barrels' created by pre splitting of rock faces shall be removed where practicable to ensure an irregular naturalistic appearance; and
  - (iv) uniform smooth faces shall not be permitted except where they occur within the natural bedding planes in the rock.

## Part 2 Specific Requirements

## 6.17 General Landscape Design Requirements

- 6.17.1 The objective of the landscape Design as shown on the Indicative Landscape Design Drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements is to provide integration of the New Works with the surrounding landscape and built environment together with any other mitigation measures identified in accordance with the Environmental Assessment Documents.
- 6.17.2 The overall landscape Design philosophy shall respond to, and reflect, the landscape through which the New Works pass.
- 6.17.3 The Company shall consult and comply with the requirements of the Specification and the Transport Scotland Landscape Advisor in connection with the overall landscape Design.
- 6.17.4 The Design shall ensure that:
- (i) the construction and establishment maintenance of the New Works comply with the landscape Design and management policy contained in Cost Effective Landscape Learning from Nature (the Scottish Office, 1998) (CEL:LfN);
  - (ii) adverse environmental impacts of all roads detailed in Table 1 of Schedule 19 of the Agreement, associated earthworks, bridges, culverts, retaining walls, other Structures, signs, barriers and lighting columns are minimised;
  - (iii) careful consideration shall be given to the location, orientation, scale, structural form, materials, finishes and colours in the Design of Structures;
  - (iv) adverse visual impacts shall be mitigated for the following viewers:
    - (a) Users of the existing roads;
    - (b) residents in all adjacent properties; and
    - (c) users of all adjacent public buildings, public open spaces, work places, footpaths, cycle routes and bridleways.
  - (v) adverse visual impact of lighting on the roads listed in Table 1 of Schedule 19 of the Agreement shall be minimised by limiting the lighting to the minimum necessary to comply with the Design criteria given in Section 1.19. In addition the road and pedestrian lighting provided shall be screened to prevent leakage and scatter of light rays;
  - (vi) all temporary works and construction areas, including, but not limited to compounds, haul routes, accesses, material stockpiles and otherwise, outside the area of the permanent works, shall be restored to their original condition, particularly in relation to soil cover, vegetation cover and hydrological condition;
  - (vii) existing vegetation shall be retained where practicable;
  - (viii) existing vegetation patterns shall be consolidated and enhanced;
  - (ix) the nature conservation value of existing habitats shall be enhanced and new habitat areas and corridors of nature conservation interest provided to replace or compensate for lost habitats;
  - (x) interesting and varied views are provided from the roads detailed in Table 1 of Schedule 19 of the Agreement which are not adversely affected by the avoidable positioning of any element of the New Works; and

Part 2 Specific Requirements

---

- (xi) account is taken of stopping and overtaking sightline distances, minimum clear distances for signs and the visibility of marker post reflective strips and numbers.
- 6.17.5 Subject to the other provisions of this Agreement drystone walls shall be retained wherever possible as landscape features and ecological habitat and to connect with the new drystone walls detailed in Appendix D and E.
- 6.17.6 All existing roads, tracks, hardstanding areas, kerbs, gullies, lamp posts, barriers, signage and otherwise, made redundant as a result of the New Works, shall be removed to their full depth of construction, graded to appropriate levels and reinstated with subsoil and topsoil where appropriate to allow their use for planting or seeding in accordance with the road and landscape Design.
- 6.17.7 The Design shall ensure that the method of treating phytotoxic elements, including, but not limited to tar, sulphurous compounds, petrochemicals and otherwise, shall not adversely effect the growth of plants and shall not contaminate topsoil or adjacent watercourses.
- 6.17.8 The Company shall exploit opportunities to re-use and recycle materials including soils, peat, vegetation, rock and otherwise within the New Works Site.
- 6.17.9 All excess material, excluding topsoil and surface peat, shall be disposed of in accordance with this Agreement and with due regard to minimising impact to the environment. The Company shall make timeous applications and be responsible for all waste management licenses required for the New Works.
- 6.17.10 The Company shall consult and comply with the requirements of SEPA regarding the disposal of waste.
- 6.17.11 The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- 6.17.12 Topsoil and topsoiling shall be in accordance with Earthworks Section 1.6
- 6.17.13 Prior to issue of the Final Completion Certificate the Company shall provide the Contracting Authority with a report describing the oppurtunities for future provision of public art at key locations, including:
- (i) Stonehaven Junction area;
  - (ii) Charleston Junction area;
  - (iii) Cleanhill Junction area;
  - (iv) River Dee crossing area;
  - (v) Milltimber Junction area;
  - (vi) South Kingswells Junction area;
  - (vii) Craibstone/A96 Junction area;
  - (viii) River Don crossing area;
  - (ix) Goval Junction / Formatine & Buchan Way area; and
  - (x) Blackdog Junction area.

## Part 2 Specific Requirements

**6.18 Protection of Existing Vegetation**

- 6.18.1 The Design shall incorporate the following general protection requirements with respect to existing vegetation:
- (i) to protect and retain the maximum possible amount of existing woodland, scrub, individual trees and shrubs and grassland vegetation as a potentially valuable landscape and ecological resource; and
  - (ii) to reuse/recycle existing cleared vegetation and soils and seed bank in the New Works;
- 6.18.2 Vegetation currently identified as that which shall be protected is shown on the Indicative Landscape Design drawings as listed in Appendix 0/4 to Part 4 of Schedule 2
- 6.18.3 The Company shall carry out a pre-construction survey to identify the vegetation as described and shall agree with Contracting Authority areas which shall be retained and protected. The extent and type of the vegetation agreed to be retained shall be recorded on drawings produced by the Company based on the format of the Indicative Landscape Design drawings.
- 6.18.4 The Company shall consult and comply with the requirements of the Specification and the Contracting Authority in connection with vegetation removal and general site clearance.
- 6.18.5 During the construction and completion of the New Works the Company shall erect a temporary fence around areas of existing vegetation within the New Works Site that require to be protected, in line with 'BS 5837: Trees in relation to design, demolition and construction' dated 30th April 2012.
- 6.18.6 The Company shall ensure that no personnel are permitted to enter the protected fenced areas during the course of the New Works other than to erect and remove the temporary fencing.
- 6.18.7 Subject to the other provisions of this Agreement, the Company shall ensure that no damage to existing vegetation or ground conditions occurs in such protected areas during the New Works.
- 6.18.8 Should damage occur, the Company shall undertake at it's own cost all necessary remedial works.
- 6.18.9 Such remedial works for trees, shrubs and other vegetation shall include but not be limited to replacement planting of the same size and form as the vegetation prior to the damage.
- 6.18.10 Such remedial works for damage to the ground conditions shall include removal and reinstatement of the ground plus the replacement, as above, of any vegetation that may be affected.
- 6.18.11 Temporary fencing may be removed on completion of engineering works in the vicinity of protected vegetation with the agreement of the Contracting Authority, and in any case shall be removed before Final Completion.

## 6.19 Protection from Wind and Windthrow

The Company shall assess the potential effect of windthrow on any existing planting and shall incorporate into the Design any appropriate mitigation measures. The Company shall consult with the Contracting Authority before carrying out any work on site which may have an impact on neighbouring landowners.

## 6.20 Planting Design

6.20.1 The planting Design shall be in accordance with the Indicative Landscape Design Drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements.

6.20.2 Changes to the planting Design may be permitted where appropriate only in locations where in the opinion of the Contracting Authority, the Design differs significantly from that indicated on the Indicative Landscape Design Drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements.

6.20.3 In considering any changes to the Design the Company shall:

- (i) retain existing trees and hedgerows wherever possible, and tie in with new planting proposals;
- (ii) avoid planting where the route crosses naturally open tracts of land, unless such planting is required for essential screening;
- (iii) minimise the risk of collision between vehicles and deer. The Company shall undertake an assessment of the potential risk of collisions between vehicles and deer and identify appropriate mitigation measures. Where compatible with other requirements, such measures shall include avoiding planting in locations which may obscure lines of sight between vehicles using the Project Roads and areas where deer may be present. Where necessary, such measures shall include erection of deer fencing to minimise the risk of collision between vehicles and deer;
- (iv) compensate for woodland lost in the New Works Site;
- (v) reinforce and link with existing hedgerows including those severed by the New Works and trees for visual and ecological continuity;
- (vi) make good use of redundant field corners and landlocked areas as appropriate;
- (vii) provide mass planting at junctions, interchanges and bridges to help assimilate the new arrangements into the surrounding landscape;
- (viii) provide visual interest throughout the route but particularly at junctions and interchanges;
- (ix) provide ecological diversity and interest wherever possible;
- (x) provide visual screening of the Project Roads and associated Structures from nearby receptors;
- (xi) ensure that the plants selected shall be generally native to the area and in keeping with the naturally occurring and existing vegetation. The planting species shall also be appropriate to the physical conditions of the locality;
- (xii) consolidate and reinforce field patterns; and
- (xiii) reduce adverse landscape and visual impacts whilst retaining beneficial views from all roads detailed in Table 1 of Schedule 19 of the Agreement.

Part 2 Specific Requirements

---

- 6.20.4 The various species and sizes of trees and shrubs incorporated in the Design shall be arranged in such a way that they create either natural woodland characteristics typical in the locality or a designed landscape feature.
- 6.20.5 Gorse or broom shall not be planted or seeded on the New Works Site.
- 6.20.6 Plant stock, provenance requirements, planting mixes and densities included in the Design shall be as shown on the Indicative Landscape Design and in the Specification. Other planting mixes may be permitted where appropriate, in locations where, in the opinion of the Contracting Authority, the Design differs significantly from that indicated on Indicative Landscape Design.
- 6.20.7 Specific requirements for planting mixes to be used in the landscape Design are listed below:
- (i) Areas of Semi Natural Woodland planting:
    - (a) Planted as a mix of predominantly native trees and shrubs, these areas are intended to mature as multi-layered woodland with a mix of native species including oak, birch, alder, elder, rowan, blackthorn, and rose.
    - (b) The Design shall resemble naturally occurring planting, featuring clumps and glades.
    - (c) Areas towards the edges of woodlands areas shall be planted with predominantly native trees and shrubs with a high percentage of small trees shrubs and climbers, and no large trees.
  - (ii) Areas of Screening Woodland planting:
    - (a) Planted as a mix of predominantly native trees and shrubs, these areas are intended to mature as multi-layered screening woodland with a mix of native species including evergreen species to assist with year round screening. Species include pine, yew, willow, rowan and holly.
    - (b) The Design shall resemble naturally occurring planting, featuring clumps and glades.
    - (c) Areas towards the edges of woodlands areas shall be planted with predominantly native trees and shrubs but with a high percentage of small trees shrubs and climbers but no large trees.
  - (iii) Wet Woodland / Scrub planting:
    - (a) These areas are intended to mature as a mix of native shrubs and small trees such as hawthorn, hazel, goat willow and birch. The Design shall resemble naturally occurring planting, featuring clumps and glades, with species mixes reflecting locally occurring native vegetation.
  - (iv) Shrub/Scrub planting:
    - (a) These areas are intended to mature as a mix of native shrubs such as hawthorn, blackthorn, elder and goat willow. The Design shall resemble naturally occurring planting, featuring clumps and glades, with species mixes reflecting locally occurring native vegetation.
  - (v) Hedge/Hedgerow Trees:

## Part 2 Specific Requirements

- (a) Generally the hedge species shall reflect those of the existing hedgerows. Native species shall be utilised, including hawthorn, dog rose, blackthorn and honeysuckle.
- 6.20.8 Holly species grown to over 500 millimetres height shall be cut back to 200 millimetres immediately prior to delivery.
- 6.20.9 The Company shall ensure that all new planting is adequately protected against destruction or damage by animals including, but not limited to, livestock, deer, rabbits, hares and voles. Protection for holly and evergreen trees shall be in the form of shrub shelters. Rabbit repellent sprays shall not be acceptable.
- 6.20.10 No shrubs or hedges shall be planted within 3 metres of a carriageway and no trees, except those maintained as hedging, within 5 metres. With respect to pipelines, underground cables, overhead wires and other equipment, all statutory or advisory minimum planting distances and clearances shall be adhered to.
- 6.20.11 Ground preparation for woodland, including scrub woodland, planting in undisturbed ground shall be as follows:
- (i) On dry, free draining ground herbaceous and undesirable woody vegetation, including gorse and broom, shall be cleared from individual planting locations within a minimum of 500 mm radius of each plant in the autumn prior to planting and the plant locations treated with translocated herbicide. The planting method shall be notch or pit planting in accordance with the Specification.
  - (ii) On wet, poorly drained ground, planting shall be into inverted turves using the notch planting method in accordance with the Specification.
- 6.20.12 The Design shall ensure that areas disturbed during the construction of the New Works shall be reinstated with a vegetation cover similar to that in areas adjacent to the disturbed area except for areas of planting, land reinstated for arable agricultural purposes and areas of wildflower seeding.

## 6.21 Management of Existing Vegetation

- 6.21.1 The Company shall survey the condition of the existing vegetation to be retained and shall submit a written action report of proposed remedial management measures to the Contracting Authority prior to commencement of any such works. The Company shall undertake all the measures which have been agreed by the Contracting Authority, in accordance with Clauses 3006 and 3010 of the Specification. Specifically the report shall include proposals for:
- (i) felling or pruning of any dead, diseased or unsafe trees or plants blocking signs and lines of sight;
  - (ii) thinning of any overcrowded trees and shrubs to allow better specimens to grow, improve habitat value or reduce shading to adjacent houses and gardens;
  - (iii) coppicing of overgrown trees and shrubs to allow growth of new shoots;
  - (iv) under planting of new shrubs and trees in gapped areas to increase screening, enhance visual amenity or improve habitat value;

---

**Part 2 Specific Requirements**

---

- (v) wildlife habitat creation, for example through deposition of felled timber and brash within woodland areas in log piles and windrows where appropriate; and
- (vi) measures to mitigate the potential for wind throw in areas of trees affected by the New Works.

**6.22 Grass and Herbaceous Vegetation General Design Requirements****6.22.1 Marginal Aquatic Planting**

Ledges occupying the zone between 0 and 0.5 metres below average water level within storage, attenuation or settlement ponds at the locations identified on the Indicative Landscape Design Drawings as listed in Appendix 0/4 to Part 4 of these New Works Requirements shall be fully planted with locally occurring native emergent aquatic species to provide visual interest and wildlife habitat and discourage public access to the water.

**6.22.2 Riparian Corridor Planting**

The planting Design shall include herbaceous planting associated with riparian corridors comprising native species occurring adjacent to the proposed planting sites using material translocated from areas disturbed by construction, where possible. The locations for herbaceous planting shall include all diverted watercourses or stretches of watercourses where existing herbaceous vegetation has been removed during construction of the New Works.

**6.22.3 Grass and Wildflower Seeding**

- (i) The seed mix Design for areas of grass and wildflower seeding shall be in accordance with the Specification.
- (ii) Productive grassland shall be used where grassland is to be returned to agricultural use for pasture. The Company shall consult with the Contracting Authority with regard to species mixes and sowing density on land potentially to be returned to agriculture.
- (iii) Areas to be potentially returned to arable use shall be seeded with nitrogen fixing species and the plants grown from such seed shall be ploughed into the soil after one full growing season. The Company shall consult with the Contracting Authority with regard to species mixes and sowing density on land to be returned to arable use.
- (iv) All woodland, and scrub woodland planting areas shall be seeded with a low-maintenance grass mix capable of suppressing weed growth in planting areas until a full canopy of trees and shrubs has developed.

**6.23 Programme and Method Statements**

- 6.23.1 The Company shall submit a Landscape Maintenance Manual to the Contracting Authority for approval not less than 6 weeks prior to commencement of planting operations detailing the landscape maintenance and management operations that the Company propose to carry out during the Establishment Period.
- 6.23.2 All landscape preparation, planting and seeding in the New Works shall be completed at the earliest practical opportunity to ensure early establishment.

---

**Part 2 Specific Requirements**

---

6.23.3 The Company shall provide method statements which shall explicitly describe the role of the Company's specialist environmental staff for all stages of the New Works. The method statements shall include, but shall not be limited to, the following activities and are to be provided for the consent of the Contracting Authority prior to the commencement of the New Works.

- (i) clearance of vegetation and erection of protective fencing;
- (ii) management of existing vegetation;
- (iii) earthworks, ground preparation, soil stripping and soiling;
- (iv) construction of protective fencing, for vegetation and wildlife;
- (v) grass / wildflower seeding including natural regeneration;
- (vi) weed control and herbicide application;
- (vii) planting;
- (viii) direct tree and shrub seeding; and
- (ix) protection of species protected by statute.

**6.24 Site Attendance**

6.24.1 The Company shall note the site attendance requirements in respect of specialist environmental staff as detailed in Section 19 of Part 1 of Schedule 2 of the Agreement.

**6.25 Contamination and Mitigation**

6.25.1 The Company shall consult and comply with the requirements of SEPA, Aberdeen City Council and Aberdeenshire Council regarding treatment and disposal of all contaminated materials

Part 2 Specific Requirements

---

- The Company shall provide Consultation Certificates in accordance with the Certification Procedure in respect of this requirement.
- 6.25.2 The Company shall be responsible for the implementation of any ground investigation it requires to provide information for the Design of the New Works and monitoring purposes to deal with known or suspected contamination and to support reuse and management of waste materials.
- 6.25.3 The Company shall select materials suitable for the environment in which they shall be placed taking into account the presence of known or suspected contaminants and shall refer to appropriate guidance in the selection of materials.
- 6.25.4 The Design, execution and completion of the New Works shall take into account the presence of known and potential land contamination. It shall achieve the objective of protection of all environmental receptors (including humans, water environment, ecology, and built structures from land contamination) through design and implementation of appropriate mitigation design and monitoring procedures.
- 6.25.5 The Company shall employ source – pathway – receptor assessments to assess the risks to human health and the environment for all phases and activities to be undertaken during the New Works, including, but not limited to ground improvement works, piling works, grouting works, service ducts, existing and new drainage, and use of SUDS. Such risk assessments shall be undertaken in accordance with published guidelines included in Appendix O.
- 6.25.6 The Company shall ensure that the New Works Site shall not be capable of being determined as Contaminated Land under and as defined by Part IIA of the Environmental Protection Act 1990 as a result of the Works. The Company shall ensure that existing linkages are minimised as far as reasonably practicable and new pollutant linkages are not created.
- 6.25.7 Mitigation works shall be designed and implemented for all areas of potential contamination identified as presenting a risk to an environmental receptor. These shall address the following:
- (i) removal of pathways to isolate contamination sources from receptors;
  - (ii) protection of receptors;
  - (iii) source removal; and
  - (iv) verification to demonstrate that the mitigation objectives have been addressed.
- 6.25.8 The Company shall undertake a watching brief for potential land contamination during the Works. In the event of suspected land contamination being discovered / encountered at any time during the Works, the Company shall notify the Contracting Authority immediately.
- 6.25.9 The Company shall submit to the Contracting Authority, for review and comment, the output of all risk assessments and mitigation Designs, and method statements detailing his proposed monitoring and on-site controls for mitigating the risks associated with contaminated soil, groundwater, dust and gases including reference to the safety and welfare of the general public, no later than 21 days prior to commencement of the New Works.

## 6.26 Materials Reuse and Waste Management

- 6.26.1 The Company shall prepare a Site Waste Management Plan ("SWMP") as part of the Environmental Management Plan as detailed in Appendix 1/24 (Quality Assurance) to the Specification. As part of the SWMP, the Company shall provide a system for tracking and recording the movement of all contaminated material and waste within the site. This shall include details of the locations from which material has been excavated and its final placement.
- 6.26.2 The Company shall have a specific documented approach to waste minimisation that shall feature in the SWMP to ensure that no unnecessary waste arisings go to landfill. This shall contain targets to reduce, re-use and / or recycle waste.
- 6.26.3 An assessment of soils and sub-soils to be reused shall be undertaken to identify any potential risks to human health or the water environment during and after construction.
- 6.26.4 The Company shall, as part of its Waste Management Plan, develop a soil and associated materials handling and management plan to minimise impacts of soil and materials storage and handling on the environment. This shall be based on the Code of Practice for the Sustainable Use of Soil published by DEFRA in 2009.
- 6.26.5 The Company shall:
- (i) clearly identify all soil resources, grades of earthworks, fill and aggregate materials;
  - (ii) design appropriate storage areas for each category of soil, fill and aggregate material;
  - (iii) plan the location of storage areas to minimise transportation movements on the Site;
  - (iv) screen designed storage areas for environmental risk;
  - (v) ensure all stockpiles have suitably designed protection (e.g. seeding to prevent erosion); and
  - (vi) find a sustainable use for any surplus soils on site (both topsoil and subsoil).
- 6.26.6 The Company shall use appropriate storage methods for any construction materials.
- 6.26.7 The Company shall, to the extent reasonable and practicable, select plant for use on Site and carry out the Works to minimise the impacts that the transfer of materials can have on the environment e.g. compaction and waterlogging.
- 6.26.8 The Company shall clearly explain and communicate the Code of Practice for the Sustainable Use of Soil and accompanying method statement to all relevant operatives and staff and compliance with the code shall be checked and verified by the Company.

**APPENDIX C - DEPARTURES FROM STANDARDS PROFORMAS**

**THIS IS APPENDIX C TO PART 2 OF THE NEW WORKS REQUIREMENTS**

**APPENDIX C**  
**Application for Departure from Standards**  
**DMRB Volumes 1, 2 and 3 (Structures) Proforma**

## Part 2 Specific Requirements

**DEPARTURE FROM STANDARDS**

(Bridges and other Highway Structures)

Name of Works .....

Name of Bridge or Structure .....

Structure Reference Number .....

**OVERSEEING ORGANISATION NAME:****APPLICATION FOR DEPARTURE FROM STANDARDS - (Departure Title)****APPLICANT:****PROJECT TITLE:****DEPARTURE No:****STRUCTURE REF:****SUBMISSION DATE:****1. List of supporting documentation**

Standards:

Drawings:

Other:

**2. Description of proposed departure**

(Include details of DMRB / Eurocode Standards and Clause numbers which are being departed from)

**3. Designer / Assessor justification**

(Include reasons why existing DMRB / Eurocode Standards are inappropriate)

**4. Cost implications**

(Include an estimate of cost savings to Transport Scotland as well as the effect on future maintenance costs)

**4.1. Construction costs****4.2. Maintenance costs****5. Applicant design of the Works Team Leader Declaration:**

I declare that reasonable professional skill and care have been exercised in the preparation of this Departure submission.

Signed:

Name:

Date:

**6. AWPR Contracting Authority Comments and Recommendation:**

I recommend that the above departure should be accepted / rejected

Signed:

Name:

Date:

**7. Overseeing Organisation Bridges Branch Comments and Recommendation:**

I recommend that the above departure should be accepted / rejected

Signed:

**Name:**

**Date:**

**8. Overseeingm Organisation Recommendation**

The above Departure is approved / rejected.

**APPENDIX E - AESTHETIC REQUIREMENTS FOR NOISE BARRIERS**

**THIS IS APPENDIX E TO PART 2 OF THE NEW WORKS INFORMATION**

**This page is blank**

## Part 2 Specific Requirements

The following Specific Requirements apply to any noise mitigation barriers which may be required at specific locations.

**Fastlink**

| Approximate Location | Approximate chainages<br>N, S, E or W/bound | Aesthetic Requirements                         |
|----------------------|---------------------------------------------|------------------------------------------------|
| Kempstone Hill       | 2280-2520 S                                 | Combination of false cutting and drystone wall |
| Strathgyle Cottage   | 4065-4270 S                                 | Drystone wall                                  |
| North Cookney Farm   | 6200-6275 S                                 | Drystone wall                                  |
| Meadowbank           | 7000-7065 S                                 | Drystone wall                                  |

**Southern Leg**

| Approximate Location                 | Approximate chainages<br>N, S, E or W/bound | Aesthetic Requirements                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Eastlands                            | 101015-101225 N                             | Maximise use of planting to visually soften barrier. Ensure rounding of top of embankment slope. Avoid steps in barrier height/ undulating top profile.                                                                                                                                                                                                                                                      |
| Corbie Lodge and Corbie Linn         | 101550-101750 N                             | Drystone wall                                                                                                                                                                                                                                                                                                                                                                                                |
| Dee Crossing                         | 101870-102175 N&S                           | Transparent noise barrier fence                                                                                                                                                                                                                                                                                                                                                                              |
| Camphill and The Gables (Dee Valley) | 102165-102865 N                             | Combination of stone faced retaining wall, false cutting and noise barrier fence. The top of the false cutting shall be set back from the AWPR carriageway to allow planting both sides of the barrier fence to soften visual impact. Provide for a smooth transition between the transparent barrier fence over the Dee and other barrier fences and avoid steps in barrier height /undulating top profile. |

## Part 2 Specific Requirements

| Approximate Location                            | Approximate chainages<br>N, S, E or W/bound | Aesthetic Requirements                                                                                                                                               |
|-------------------------------------------------|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A93 westbound verge, west of B979 junction      | A93 0-100 W                                 | Mortared stone wall to match appearance of wall on opposite side of A93 to be in keeping with local character and help to offset loss of existing walls in the area. |
| Milltimber Brae Overbridge                      | Extent of overbridge both sides             | Transparent noise barrier fence.                                                                                                                                     |
| Milltimber junction link road                   | 0-915 S                                     | Drystone wall along the whole length of southbound verge.                                                                                                            |
| Milltimber including Old Deeside line Walk      | 102870-103950 S                             | High quality timber barrier fence with appearance of both sides in character with suburban garden boundaries. Avoid steps in barrier height /undulating top profile. |
| Westholme                                       | 108800-108855 N                             | High quality timber barrier fence with appearance of both sides in character with suburban garden boundaries. Avoid steps in barrier height /undulating top profile. |
| West Hatton and Highfield                       | 108910-109260 N                             | Avoid steps in barrier height/ undulating top profile on significant slope.                                                                                          |
| Fairley Home Farm, The Coach House and Bonvista | 109825-110395 S                             | Combination of false cutting (between ch109840 and 110395) and barrier fence (between ch109825 and 109970).                                                          |

**APPENDIX F - PROCEDURE FOR DEMONSTRATING COMPLIANCE WITH THE  
JUNCTION REQUIREMENTS AND JUNCTION PERFORMANCE INDICATORS**

**THIS IS APPENDIX F TO PART 2 OF THE NEW WORKS REQUIREMENTS**

**PART 1:**

**PROCEDURE FOR DEMONSTRATING COMPLIANCE WITH THE JUNCTION  
REQUIREMENTS AND JUNCTION PERFORMANCE INDICATORS**

**PART 2:**

**JUNCTION PERFORMANCE INDICATORS**

**This page is blank**

**APPENDIX F PART 1****PROCEDURE FOR DEMONSTRATING COMPLIANCE WITH THE JUNCTION REQUIREMENTS AND JUNCTION PERFORMANCE INDICATORS****Assessment Procedure**

The Company shall provide to the Contracting Authority, as part of ITS obligations under the Certification Procedure, the S-Paramics micro-simulation model(s) developed for the proposed scheme, the full log run folder outputs and the analysis Excel Workbook(s) to demonstrate compliance with the junction requirements set out in the Agreement and the Junction Performance Indicators in APPENDIX F PART 2.

The instructions regarding the extraction and analysis of the Junction Performance Indicators (“JPI”s) are outlined in Appendix G along with provision of the Junction Compliance Models. The process provides a consistent framework for the assessment of the operational performance of the Company’s scheme design, and shall compare this design against the benchmark of the values established within the JPIs given in APPENDIX F PART 2 with respect to:

1. Hourly flow rates (per approach arm);
2. Average and maximum queue lengths (per approach arm);
3. Average and maximum journey times (per movement through the junction);
4. Overall network statistics.

Each of these elements shall be submitted and assessed using the Excel Workbooks provided. The version of Microsoft Excel that is to be used for the analysis of the JPIs is Excel 2010.

For each junction model there is a separate JPI analysis Excel workbook, covering the above mentioned four JPI indicators. For all the eight junction models the specific workbook for each junction shall be used as per Table 1 below:

**Table 1: S-Paramics Junction Performance Model details**

| <b>Model</b>         | <b>Software Version</b> | <b>Main Junctions Within Model</b>             |

**APPENDIX F PART 2**

## Part 2 Specific Requirements

## JUNCTION PERFORMANCE INDICATORS

This APPENDIX F PART 2 presents the required operational JPIs derived from analysing the results from the Scheme Specimen Design Model(s) that has been developed using various versions of S-Paramics microsimulation software (see Table 1 below).

The analysis workbooks, used to produce the JPIs from the model, are included as electronic files within the Information Room. Instructions on how to assess the junction performance of proposed junctions included in the New Works are contained within APPENDIX G.

For each junction, operational JPIs are required for two traffic forecast demand scenarios and separate analysis files are included in the Information Room. The first set of JPIs are required to meet or exceed the junction performance as assessed under the core scenario traffic forecasts extracted from the Aberdeen Sub-Area Model version 3B (ASAM3B). The second set of JPIs are required to optimise the junction performance under the sensitivity test scenario traffic forecasts extracted from Aberdeen Sub-Area Model version 4A (ASAM4A).

### JPI Definitions

The operational performance of the modelled area is based on the four sets of JPIs described in Appendix F Part 1, utilising the models described in Table 1 below. As noted above, there are two versions of each model, one based on ASAM3B and the other based on ASAM4A as noted in the previous paragraph.

**Table 1: S-Paramics Junction Performance Model details**

| Model                | Software Version | AM Peak          |                | PM Peak          |                |
|----------------------|------------------|------------------|----------------|------------------|----------------|
|                      |                  | Start time (hrs) | End time (hrs) | Start time (hrs) | End time (hrs) |
| A90N                 | 2005.1           | 0745             | 0945           | 1645             | 1845           |
| A93                  | 2005.1           | 0700             | 0915           | 1630             | 1845           |
| A944                 | 2005.1           | 0745             | 0945           | 1645             | 1845           |
| Charleston           | 2002.1           | 0630             | 0915           | 1600             | 1845           |
| Cleanhill            | 2005.1           | 0745             | 0930           | 1645             | 1830           |
| Dyce                 | 2003.1           | 0700             | 1000           | 1600             | 1900           |
| Stonehaven           | 2005.1           | 0700             | 1015           | 1600             | 1915           |
| Balmedie To Tippetry | 2012.1           | 0700             | 1000           | 1600             | 1900           |

*JPI1 – the peak traffic flow rate across the stop lines or give-way markings on each junction approach*

This is defined as the minimum peak hourly flow rate that must be met throughout the separate modelled periods on each junction approach arm. This JPI is to be derived by selecting the highest (peak) hourly flow value occurring on each junction approach in any individual hour within the separate modelled periods. For example, if the highest value on a particular approach is found to occur between 08:00hrs and 09:00hrs during the AM

Part 2 Specific Requirements

---

simulation, this is the final JPI result for the AM. The Company shall note that it will not necessarily be the case that the highest value will occur within the same individual hour for all junction approaches.

All flow rate thresholds shall be derived by averaging the log run results from 10 simulations per modelled period of the Scheme Model(s) [see table 1] being analysed.

*JPI2 – the average and maximum queue lengths allowed on each of the junction approach arms.*

The average queue length JPI is defined as the average queue length on each approach arm within each of the separate modelled periods. Unless otherwise agreed in writing by the Contracting Authority, all results shall be either no more than +10 per cent of the average queue length values in metres, or within two vehicle lengths (12m). These are tabulated in the supplied Excel Workbooks for each junction. The average queue length is output in five minute intervals for each approach arm. This interval is set within the model 'measurements' files, which shall not be revised or altered. Using the 'JPI 2 (Queues)' tab of the JPI Excel Workbook (the Excel JPI Workbook and its use is described in detail in Section G), the value for each five minute interval simulated within the modelled period is then averaged across the modelled period, and the result then averaged across each of the 10 simulation runs for the separate periods to generate the average queue length JPI values for each period.

The maximum queue length JPI is defined as the maximum queue length on each approach arm within each of the separate modelled periods. Unless otherwise agreed in writing by the Contracting Authority, all results shall be either no more than +10 per cent of the maximum queue length values in metres, or within two vehicle lengths (12m). These are tabulated in the supplied Excel Workbooks for each junction. The maximum queue length is output in five minute intervals for each approach arm. This interval is set within the model 'measurements' files, which shall not be revised or altered. Using the 'JPI 2 (Queues)' tabs of the JPI Excel Workbook (the Excel JPI Workbook and its use is described in detail in Section G), the maximum value from each period is averaged across each of the 10 simulation runs for the separate periods to generate the maximum queue length JPI values for each period.

The maximum and average queues are extracted from the Scheme Model(s) [see table 1] using the S-Paramics 'queue routes' function and a set of predefined queue paths in each of the junction models. It is likely that the defined 'Queue Routes' included in the models will require to be modified as necessary to reflect the Company's design. Should this be the case, the Company shall reset the 'Queue Routes' in the models such that they extend beyond the end of the modelled vehicle queues in the simulation model runs, and therefore record the maximum and average queue lengths correctly.

*JPI3 – the average and maximum journey time for each traffic movement (or vehicle path) passing through each junction*

The average journey time JPI is defined as the average journey time for all vehicles passing along each of the pre-defined journey paths over the separate modelled periods. Unless otherwise agreed in writing by the Contracting Authority, all results shall be either no more than +10 per cent of the average journey time values, or no more than +20 per cent if the journey time is under 150 seconds. These are tabulated in the supplied Excel Workbooks for each junction. The average journey time is output in five minute intervals for each journey path. This interval is set within the model 'measurements' files, which shall not be revised or altered. The journey time analysis tabs in the JPI Excel Workbook (this Excel Workbook and its use is described in detail in Appendix G) shall then be used to calculate the overall average journey time for each vehicle movement from the 10 simulation runs for each of the modelled periods to generate the average journey time JPI values for each period.

---

**Part 2 Specific Requirements**

---

The maximum journey time JPI is defined as the maximum journey time along each of the pre-defined journey paths over the separate modelled periods. Unless otherwise agreed in writing by the Contracting Authority, all results shall be either no more than +10 per cent of the maximum journey time values, or no more than +20 per cent if the journey time is under 150 seconds. These are tabulated in the supplied Excel Workbooks for each junction. The maximum journey time is output in five minute intervals for each journey path. This interval is set within the model 'measurements' files, which shall not be revised or altered. The journey time analysis tabs of the JPI Excel Workbook (this Excel Workbook and its use is described in detail in Appendix G) should then be used to calculate the maximum journey time for each vehicle movement averaged across the 10 simulation runs for each of the modelled periods to generate the maximum journey time JPI values for each period

It is likely that the defined 'Journey Paths' included in the models will require to be modified as necessary to reflect the Company's design. Should this be the case, the Company shall reset the 'Journey Paths' in the models such that they retain the same fixed start and end points as the defined journey paths.

*JPI4 – overall network operational performance statistics*

In addition to JPI1, 2 and 3 above, the overall network performance is defined through analysing the following model statistics. The supplied network statistics analysis Excel Workbooks shall be used to extract and analyse the overall model statistics separately for the AM and PM modelled periods. Further details and instructions on the use of the network statistics analysis Excel Workbook are presented in APPENDIX G.

The overall model performance statistics comprise:

- (i) mean network travel time (per vehicle);
- (ii) total network travel time (all vehicles)
- (iii) mean network speed (mph);
- (iv) total vehicles released by end of simulation;
- (v) vehicles on network at end of simulation; and,
- (vi) throughput by end of simulation (%).

The model statistics summarise the overall performance of the scheme model for each of the modelled periods.

**Model Files**

When using the supplied Scheme Specimen Design Models, no model files other than those specifically associated with the coding, testing and analysis of the Company's design proposals shall be modified or altered in any way. This includes, but is not necessarily limited to, the following model files:

- (i) Configuration files – 'configuration';
- (ii) Measurements file – 'measurements'
- (iii) Demand matrix files – 'demands'
- (iv) Demand release profiles file – 'profile'
- (v) Bus frequency data – 'busschedules';
- (vi) Bus stopping times – 'buspassengers';
- (vii) Demand profile assignment matrix – 'matrix'
- (viii) Time period settings – 'periods'

---

**Part 2 Specific Requirements**

---

- (ix) Vehicle type data – ‘vehicles7’
- (x) S-Paramics software version – ‘version’
- (xi) Zone data – ‘zones’
- (xii) Car Park data – ‘carparks’.

Those model files that are permissible to modify or revise if required, over and above those model files associated with coding the Company’s junction designs, are as follows (file name noted):

- (i) Queue length analysis routes – ‘queueroutes’;
- (ii) Journey time path files (but not the start / end points of each path) – ‘paths’; and
- (iii) Bus route files (but not the start / end points of each bus route) – ‘busroutes’.

**This page is blank**

**APPENDIX G - CONTRACT JUNCTION COMPLIANCE TRAFFIC MODELS  
AND ASSOCIATED INSTRUCTIONS AND ANALYSIS WORKBOOKS**

**THIS IS APPENDIX G TO PART 2 OF THE NEW WORKS REQUIREMENTS**

**This page is blank**

## Part 2 Specific Requirements

**APPENDIX G****CONTRACT JUNCTION COMPLIANCE TRAFFIC MODELS  
AND ASSOCIATED INSTRUCTIONS AND ANALYSIS WORKBOOKS**

The following Contract Junction Compliance Models are provided, each with two variants of Aberdeen Sub-Area Model demand as per APPENDIX F PART 2:

- (i) A90N AWPR Scheme Specimen Design Model 2027 ASAM3B, and A90N AWPR Scheme Specimen Design Model 2033 ASAM4A;
- (ii) A93 AWPR Scheme Specimen Design Model 2027 ASAM3B, and A93 AWPR Scheme Specimen Design Model 2033 ASAM4A;
- (iii) A944 AWPR Scheme Specimen Design Model 2027 ASAM3B, and A944 AWPR Scheme Specimen Design Model 2033 ASAM4A;
- (iv) Charleston AWPR Scheme Specimen Design Model 2027 ASAM3B, and Charleston AWPR Scheme Specimen Design Model 2033 ASAM4A;
- (v) Cleanhill AWPR Scheme Specimen Design Model 2027 ASAM3B, and Cleanhill AWPR Scheme Specimen Design Model 2033 ASAM4A;
- (vi) Dyce AWPR Scheme Specimen Design Model 2027 ASAM3B, and Dyce AWPR Scheme Specimen Design Model 2033 ASAM4A; and,
- (vii) Stonehaven AWPR Scheme Specimen Design Model 2027 ASAM3B, and Stonehaven AWPR Scheme Specimen Design Model 2033 ASAM4A.
- (viii) Balmedie to Tippetry AWPR Scheme Specimen Design Model 2033.

There are two sets of analysis workbooks provided for the AWPR junction models, one set for each Aberdeen Sub-Area Model demand version. There is one set of analysis workbooks provided for the Balmedie to Tippetry junction model for the single demand scenario. The following analysis workbooks are provided for each demand version, which define the associated JPI values to be achieved and perform the required analysis:

| <b>Model</b>          | <b>Software Version</b> | <b>Main Junctions Within Model</b>             |
|-----------------------|-------------------------|------------------------------------------------|
| A90N                  | 2005.1                  | A90N AWPR junction                             |
| A93                   | 2005.1                  | A93 Milltimber junction                        |
| A944                  | 2005.1                  | A944/AWPR                                      |
|                       |                         | North Kingswells                               |
| Charleston            | 2002.1                  | AWPR/A90 Junction                              |
| Cleanhill             | 2005.1                  | Fastlink/AWPR junction                         |
| Dyce                  | 2003.1                  | A947 Goval Junction                            |
|                       |                         | A96 Craibstone Junction                        |
| Stonehaven            | 2005.1                  | Fastlink/A90 Junction                          |
| Balmeadie To Tippetry | 2012.1                  | Balmedie, A975 Newburgh and Tippetry Junctions |

## Part 2 Specific Requirements

All model coding, running, analysis and any other associated modelling work shall be undertaken using S-Paramics Version 2005.1 for the A90, A93, A944, Cleanhill and Stonehaven models. Whereas S-Paramics Version 2003.1 shall be used for Dyce and S-Paramics Version 2002.1 shall be used for Charleston. For clarity, these are noted in Table 2 below.

| Model                | Software Version |
|----------------------|------------------|
| A90N                 | 2005.1           |
| A93                  | 2005.1           |
| A944                 | 2005.1           |
| Charleston           | 2002.1           |
| Cleanhill            | 2005.1           |
| Dyce                 | 2003.1           |
| Stonehaven           | 2005.1           |
| Balmedie to Tippetty | 2012.1           |

For the extraction of the Junction Performance Indicators and the completion of the analysis Excel Workbooks by the Company, it is a requirement that 10 simulation runs of each of modelled period are undertaken. Each model simulation run shall be undertaken using the preset configuration and measurement files supplied with the original model. To run the AM period, the AM model variant should be used and to run the PM period the PM model variant should be used.

Model outputs should be saved in the model log directory, in sub directories named 'run-001' through to 'run-010'.

The Company shall undertake a review of the modelled snapshots from each model run prior to undertaking any analysis, to ensure that overall network performance looks satisfactory compared to the provided Scheme Specimen Design Models. Collection of model snapshots in 15 minute intervals is defined in the measurements file provided.

The Company shall also undertake a "logic check" on the variations between different model runs to ensure that no individual model run skews the results due to localised congestion.

### Collating data into the JPI Workbooks

All JPI data shall be extracted from the S-Paramics model output using the Excel JPI Workbooks, titled as follows:

For the 2027 model scenario, the following spreadsheets shall be used, note that Balmedie to Tippetty is not assessed using the 2027 scenario:

- A90\_JPIs\_2027.xlsm;
- A93\_JPIs\_2027.xlsm;
- A944\_JPIs\_2027.xlsm;
- Charleston\_JPIs\_2027.xlsm;
- Cleanhill\_JPIs\_2027.xlsm;

Part 2 Specific Requirements

---

- Dyce\_JPIs\_2027.xlsm; and
- Stonehaven\_JPIs\_2027.xlsm.

For the 2033 model scenario, the following spreadsheets shall be used:

- A90\_JPIs\_2033.xlsm;
- A93\_JPIs\_2033.xlsm;
- A944\_JPIs\_2033.xlsm;
- Charleston\_JPIs\_2033.xlsm;
- Cleanhill\_JPIs\_2033.xlsm;
- Dyce\_JPIs\_2033.xlsm;
- Stonehaven\_JPIs\_2033.xlsm;
- Balmedie – Tipperty\_Flows.xlsm;
- Balmedie – Tipperty\_Queues Avg.xlsm;
- Balmedie – Tipperty\_Queues Max.xlsm;
- Balmedie – Tipperty\_JT Avg.xlsm;
- Balmedie – Tipperty\_JT Max.xlsm; and
- Balmedie – Tipperty\_Network Stats.xlsm.

The following data extraction process for collation of the Junction Performance Indicator data into the Excel Workbooks shall be followed:

- (a) Upon opening the relevant Excel Workbook for each period, the user may be asked if macros are to be enabled. 'Enable Macros' should be clicked to confirm
- (b) The computer folder location where each of the junction models are stored should be defined in the 'links' tab, in cells F4 to F13 for the AM peak period models and cells F14 to F23 for the PM peak period models.
- (c) The button labelled "Delete and Refresh ALL" in the 'button' tab should be clicked to import and analyse the data from each of the 10 AM and PM model runs.

Upon completion of the above, it is recommended the Excel Workbook shall be saved.

### **Link Flow Analysis (JPI1)**

After the data has been collated into the workbook, the next steps highlight the method to undertake the **model flow** Junction Performance Indicator check. The tab 'JPI 1 (Flow)' compares the Company's model values to those from the Scheme Specimen Design Model. The worksheet indicates if the performance of the Company's model is satisfactory for each junction approach included.

Upon completion of the above analysis, the Excel Workbook shall be saved.

### **Average and Maximum Queue Length Analysis (JPI2)**

After the data has been collated into the workbook, the next steps highlight the method to undertake the **model average and maximum queue** Junction Performance Indicator check. The tab 'JPI 2 (Queues)' compares the Company's model values to those from the Scheme Specimen Design Model. The worksheet indicates if the performance of the Company's model is satisfactory for each junction approach included.

Upon completion of the above analysis, the Excel Workbook shall be saved.

### **Average and Maximum Journey Time Analysis (JPI3)**

After the data has been collated into the workbook, the next steps highlight the method to undertake the **model average and maximum journey time** Junction Performance Indicator check. The tab 'JPI 3 (Journey Time)' compares the Company's model values to those from the Scheme Specimen Design Model. The worksheet indicates if the performance of the Company's model is satisfactory for each journey time route defined.

Upon completion of the above analysis, the Excel Workbook shall be saved.

### **Overall Network Statistics (JPI4)**

After the data has been collated into the workbook, the next steps highlight the method to undertake the **model network statistics** Junction Performance Indicator check. The tab 'JPI 4 (Network Stats)' compares the Company's model values to those from the Scheme Specimen Design Model. This check is present to provide an overall indication of model performance against the specimen design.

Upon completion of the above analysis, the Excel workbook shall be saved.

**APPENDIX H - REQUIREMENTS FOR PRINCIPAL STRUCTURES**

**THIS IS APPENDIX H TO PART 2 OF THE NEW WORKS REQUIREMENTS**

**This page is blank**

## APPENDIX J

### PROCEDURE FOR STRUCTURES ASSESSMENT

The Contracting Authority do not warrant the accuracy of any assessment reports of existing Structures.

- J1** The assessment of an existing Structure which is to be widened or otherwise modified and incorporated in the Works, shall be carried out in accordance with the flowchart below and the following procedure:
- (a) analyse the existing Structure to determine the load effects (moments, shears etc), the loading being in accordance with current assessment standards;
  - (b) analyse the Structure to determine the load effects (moments, shears etc) following widening or modification, the loading on the whole Structure being in accordance with current assessment standards;
  - (c) analyse the Structure to determine the load effects (moments, shears etc) following widening or modification, the loading on the whole Structure being in accordance with current Eurocode design standards;
  - (d) in relation to that part of the existing Structure to be retained and incorporated in the modified / widened Structure, provided the load effects determined in (b) above are no more adverse than those determined in (a) above, no strengthening need be carried out on the part of the existing Structure to be retained; and
  - (e) in relation to that part of the existing Structure to be retained and incorporated in the modified / widened Structure, where the load effects determined in (b) above are more adverse than those determined in (a) above, the part of the existing Structure to be retained and in which the load effects have become more adverse due to the proposed widening / modification shall be strengthened to carry the load effects determined in (c) above. Those parts of the existing Structure in which the load effects have not increased need not be strengthened.
- J2** All new works to existing Structures which are to be widened or otherwise modified shall be designed to accommodate the load effects determined in accordance with current Eurocode design standards.

Flowchart for the assessment /strengthening of existing structure

## Part 2 Specific Requirements

**1 ROAD DETAILS****1.1** Type of road**1.2** Permitted traffic speed <sup>2</sup>**1.3** Existing restrictions <sup>3</sup>**2 SITE DETAILS****2.1** Obstacle crossed**3 PROPOSED STRUCTURE****3.1** Description of Structure and design working life <sup>4</sup>**3.2** Structural type**3.3** Foundation type (including any special measures or associated works such as ground treatment or mine workings consolidation to take account of any problems identified in Section 6 below)**3.4** Span arrangements**3.5** Articulation arrangements**3.6** Classes and levels <sup>5</sup>**3.6.1** Consequence class**3.6.2** Reliability class

---

3.6.3 Inspection level

**3.7** Road restraint systems requirements

**3.8** Proposed arrangements for future maintenance and inspection

3.8.1 Traffic management

3.8.2 Arrangements for future maintenance and inspection of structure.  
Access arrangements to structure.

**3.9** Environment and sustainability

**3.10** Durability. Materials and finishes <sup>6</sup>

**3.11** Risks and hazards considered for design, execution, maintenance and demolition  
Consultation with and / or agreement from CDM co-ordinator <sup>7</sup>

**3.12** Proposed arrangements for execution

3.12.1 Construction of Structure

3.12.2 Traffic management

3.12.3 Service diversion

3.12.4 Interface with existing Structures

Part 2 Specific Requirements

---

**4 DESIGN CRITERIA**

**4.1 Actions**

4.1.1 Permanent actions

4.1.2 Snow, Wind and Thermal actions

4.1.3 Actions relating to normal traffic under AW regulations and C&U regulations<sup>8</sup>

4.1.4 Actions relating to General Order traffic under STGO regulations<sup>9</sup>

4.1.5 Footway or footbridge variable actions

4.1.6 Actions relating to Special Order traffic, provision for exceptional abnormal indivisible loads including location of vehicle track on deck cross-section<sup>10</sup>

4.1.7 Accidental actions

4.1.8 Actions during execution

4.1.9 Any special actions not covered above<sup>11</sup>

**4.2 Heavy or high load route requirements and arrangements being made to preserve the route, including any provisions for future heavier loads or future widening<sup>12</sup>**

**4.3 Minimum headroom provided**

**4.4 Authorities consulted and any special conditions required**

## Part 2 Specific Requirements

**4.5** Standards and documents listed in the Technical Approval Schedule

Refer to Annex A

**4.6** Proposed Departures from standards given in 4.5**4.7** Proposed Departures relating to methods for dealing with aspects not covered by standards in 4.5**4.8** List of record of options and choices (for Category 2 and 3 checks) <sup>13</sup>**5 STRUCTURAL ANALYSIS****5.1** Methods of analysis proposed for superstructure, substructure and foundations <sup>14</sup>**5.2** Description and diagram of idealised Structure to be used for analysis**5.3** Assumptions intended for calculation of structural element stiffness**5.4** Proposed range of soil parameters to be used in the design of earth retaining elements <sup>15</sup>**6 GEOTECHNICAL CONDITIONS****6.1** Geotechnical Category of Structure (BS EN 1997-1)**6.2** Acceptance of recommendations of the Geotechnical Design Report to be used in the design and reasons for any proposed changes**6.3** Summary of design for highway Structure in the Geotechnical Design Report

Part 2 Specific Requirements

**6.4** Differential settlement to be allowed for in the design of the Structure (including reference to settlements at interface between Structure and earthworks)

**6.5** If the Geotechnical Design Report is not yet available, state when the results are expected and list the sources of information used to justify the preliminary choice of foundations <sup>16</sup>

**6.6** Tolerances for reinforced soil Structures (face angle >70 degrees) (including methodology for measurement)

**7 CHECKING**

**7.1** Proposed Category and Design Supervision Level

Category 3. Design Supervision Level DSL3

**7.2** Name of proposed Category 3 Checker

**8 DRAWINGS AND DOCUMENTS**

**8.1** List of drawings (including numbers) and documents accompanying the submission <sup>17</sup>

- ANNEX A - Technical Standards Schedule <sup>18</sup>
- ANNEX B - Diagram of idealised structural analysis model
- ANNEX C - Departures from Standards
- ANNEX D - Drawings
- ANNEX E - Choices and Options – Information to be Provided <sup>13</sup>

**9 THE ABOVE ACCURATELY REFLECTS THE ASSUMPTIONS USED FOR DESIGN OF THIS STRUCTURE**

## Part 2 Specific Requirements

**Notes**

- 1 Delete as appropriate.
- 2 For a bridge, give over and / or under.
- 3 Include weight, height, width and any environmental restrictions at or adjacent to the bridge.
- 4 The design working life of the structure, including temporary structure, and replaceable structural parts shall be given. They shall be expressed as a number of years rather than a range of years. A design working life shall be based on the DMRB if stated. Otherwise it may be based on the guidance given in the Overseeing Organisation's current requirements for the use of Eurocodes for the design of highway structures.
- 5 State the classes and levels for the whole structure, as well as those for the individual main structural elements if higher or lower. See the Overseeing Organisation's current requirements for the use of Eurocodes for the design of highway structures. Refer to BS EN 1990:2002 + A1:2005 cl. B3, B4 and B5 for further information.
- 6 For concrete Structures, give applicable exposure classes for particular structural elements as stated in TS IA 23. For all material strengths given, list the relevant codes / standards..
- 7 List only risks and hazards that would not be apparent to an experienced and competent Contractor or are likely to require special attention to manage them effectively. Where possible and practicable, the identified potential risks and hazards shall be eliminated or minimised during the design stage. Designers shall name the CDM co-ordinator and confirm that the CDM co-ordinator has reviewed the risks and hazards identified in the AIP and is satisfied.
- 8 e.g. Load Models 1 or 2, BS EN 1991-2.
- 9 e.g. SV model vehicle in Load Model 3, BS EN 1991-2.
- 10 e.g. SOV model vehicle in Load Model 3, BS EN 1991-2 and / or individual vehicle which includes the following information as applicable.
  - a) Gross weight of the vehicle in tonnes and vehicle type and number;
  - b) Axle load and spacing (longitudinally and transversely);
  - c) Air cushion in tonnes over area applied in m x m; and
  - d) Single or twin tyres and wheel contact areas.
- 11 e.g. seismic action, atmospheric icing, floating debris etc.
- 12 The heavy or high load route requirements should be confirmed with Transport Scotland.
- 13 The list of choices and options for Category 2 and 3 Structures shall be recorded in an Annex to the SDS and Designer record as appropriate.
- 14 List the main structural elements for superstructure, substructure and foundation.
- 15 It should be clearly stated, where values of soil parameters are given, whether the values are characteristic or design values, e.g.  $\phi_k$  or  $\phi_d$  respectively.
- 16 When the Geotechnical Design Report becomes available , an addendum to the SDS, covering section 6, must be submitted to the Contracting Authority. The addendum must have its own sections 8 and 9 to provide a list of drawings, documents and signatures.
- 17 Where appropriate, also include:
  - a) Relevant extracts from the Geotechnical Design Report;
  - b) Methods of dealing with aspects not covered by Standards;
  - c) Departures from Standard and
  - c) Relevant correspondence and documents from consultations.
- 18 The relevant Design Standards are given in Annex A below to this Appendix K.
- 19 CEng, MICE, MStructE or equivalent.

## **STRUCTURES DESIGN STATEMENT**

### **ANNEX A**

#### **Technical Standards Schedule for New Works Design**

## Part 2 Specific Requirements

It is the responsibility of the compiler of the Structures Design Statement and/or the design or check certificate compiler to ensure that the Standards, references and clauses used, including amendments and corrigenda, are relevant and current at the Base Date.

Documents in *italics* are under preparation at the time of publication of this document.

All Standards and Documents not used shall be struck through.

**Schedule of Documents Relating to  
Design of Highway Bridges and Structures  
using Structural Eurocodes**

| <b>British Standards</b><br>(non-conflicting with Structural Eurocodes) |                                                                                                                                            |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| BS 4449:2005 + A2:2009                                                  | Steel for the reinforcement of concrete – Weldable reinforcing steel – Bar, coil and decoiled product – Specification                      |
| BS 4483:2005                                                            | Steel fabric for the reinforcement of concrete – Specification                                                                             |
| BS 5896:2012                                                            | High tensile steel wire and strand for the prestressing of concrete – Specification                                                        |
| BS 6779-4:1999                                                          | Highway parapets for bridges and other structures – Part 4: Specification for parapets of reinforced and unreinforced masonry construction |
| BS 7818:1995                                                            | Specification for pedestrian restraint systems in metal                                                                                    |
| BS 8006-1:2010                                                          | Code of practice for strengthened / reinforced soils and other fills                                                                       |
| BS 8500-1:2006 + A1:2012                                                | Concrete – Complementary British Standard to BS EN 206-1 Part 1: Method of specifying and guidance for the specifier                       |
| BS 8666:2005                                                            | Scheduling, dimensioning, bending and cutting of steel reinforcement for concrete – Specification                                          |
| BS EN 1317-1:2010<br>Road restraint systems – Part 1                    | Terminology and general criteria for test methods                                                                                          |
| BS EN 1317-2:2010<br>Road restraint systems – Part 2                    | Performance classes, impact test acceptance criteria and test methods for safety barriers including vehicle parapets                       |
| BS EN 1317-3:2010<br>Road restraint systems – Part 3                    | Performance classes, impact test acceptance criteria and test methods for crash cushions                                                   |
| <i>BS EN 1317-4:1998<br/>Road restraint systems – Part 4</i>            | <i>Performance classes, impact test acceptance criteria and test methods for terminals and crash cushions</i>                              |
| BS EN 1317-5:2007 + A1:2008<br>Road restraint systems – Part 5          | Product requirements and evaluation of conformity for vehicle restraint systems                                                            |

## Part 2 Specific Requirements

**British Standards**

(non-conflicting with Structural Eurocodes)

|                            |                                                                                                                  |
|----------------------------|------------------------------------------------------------------------------------------------------------------|
| BS EN 10025-1:2004         | Hot rolled products of structural steels – Part 1: General technical delivery conditions                         |
| BS EN 10025-2:2004         | Hot rolled products of structural steels – Part 2: Technical delivery conditions for non-alloy structural steels |
| BS EN 13369:2004 + A2:2006 | Common rules for precast concrete products                                                                       |
| BS EN 14844:2006 + A2:2011 | Precast concrete products. Box culverts                                                                          |
| BS EN 15050:2007 + A1:2012 | Precast concrete products. Bridge elements                                                                       |

**Structural Eurocodes**

|                                     |                                                                                                                                       |

**This page is blank**

## Part 2 Specific Requirements

**ANNEX E: PROJECT SPECIFIC INFORMATION TO BE RECORDED IN THE Structures Design Statement (SDS)**

A list of choices and options are compiled in this Annex.

It is the responsibility of the compiler of the SDS and the designer record to ensure that the Standards, references and clauses listed, including amendments and corrigenda, are relevant and current at the Base Date.

Information is to be recorded only if applicable and/or where recommended values/methods are not used.

All choices and options which are not applicable shall be struck through.

Where the information to be recorded in the SDS is not available at the time of its submission, this shall be noted. The information shall be added when available to the SDS, addendum SDS or addendum designer record as appropriate.

The designer record is where the Designer should record the choices and options selected. The designer record should be provided to the Checker and should be included in the As Built Records, together with the SDS and the Design and Check Certificates.

| Document and Clause for Choices and Options                      | Choices and Options                                                                                                                                                                                                    | Where recorded if applicable to the project | Comment |

## Part 2 Specific Requirements

| Document and Clause for Choices and Options                                                                      | Choices and Options                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Where recorded if applicable to the project                                                                                                                                                                                                                                                   | Comment |
|------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| NA.2.1 (2) NOTE Replacement and loss of tension components BS EN 1993-1-11:2006, 2.3.6                           | <p>Unless specified otherwise for specific projects, structures should be designed to accommodate the loss of any one hanger, stay without any restrictions to traffic or other imposed loads. The structure should be designed to satisfy all ultimate limit state requirements in the accidental combination, including the dynamic effect of cable removal in NOTE 2 of <b>2.3.6(2)</b>.</p> <p>Where a structure cannot be designed to accommodate the loss of a particular tension component, the Project Specification should specify the protection measures to be adopted to prevent sudden removal of that tension component</p> | <p>Give details in SDS 3.8.1 if structure is not designed to accommodate the loss of any one hanger, stay without any restrictions to traffic or other imposed loads.</p> <p>Specify in the SDS 3.8.1 the protection measures for the prevention of sudden removal of tension components.</p> |         |
| NA.2.3 (1) Note 6 Strengths of steels and wires [BS EN 1993-1-11:2006, 3.1]                                      | At present there is no limit to the maximum value for $f_u$ . However the current ongoing research might find that extra high strength wire is more susceptible to premature failure. Wires of tensile strengths greater than the recommended maximum value should be agreed and specified in the Project Specification.                                                                                                                                                                                                                                                                                                                  | Specify in the SDS 3.9 the tensile strength of wires if it is greater than the recommended maximum in the Project Specification.                                                                                                                                                              |         |
| NA.2.4 Corrosion protection of the exterior of Group B tension components BS EN 1993-1-11:2006, 4.4 – (2) NOTE 1 | The corrosion resistance class for the stainless steel should be specified for the individual projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Specify in the SDS 3.9 the corrosion resistance class for the stainless steel for the individual project.                                                                                                                                                                                     |         |
| NA.2.7 Persistent design situation during service EN 1993-1-11:2006, 5.3 – (2) NOTE                              | The aforementioned structures are therefore not within the scope of BS EN 1993-1-11:2006, 5.3. If the rules of BS EN 1993-1-11 are applied to such structure types it is suggested that the actions P and G should have partial factors applied to them separately as required in 5.2 (3). In such cases the project specification should give the values of $\gamma_G$ and $\gamma_P$ that are to be used.                                                                                                                                                                                                                               | Specify in the SDS 5.1 the values of $\gamma_G$ and $\gamma_P$ for the individual project.                                                                                                                                                                                                    |         |

## Part 2 Specific Requirements

**APPENDIX K2 - STRUCTURES DESIGN STATEMENT  
(EXISTING STRUCTURES ASSESSMENT)**

**THIS IS APPENDIX K2 TO THE NEW WORKS REQUIREMENTS**

**This page is blank**

**1 ROAD DETAILS****1.1** Type of road**1.2** Permitted traffic speed <sup>2</sup>**1.3** Existing restrictions <sup>3</sup>**2 SITE DETAILS****2.1** Obstacle crossed**3 PROPOSED STRUCTURE****3.1** Description of Structure**3.2** Structural type**3.3** Foundation type**3.4** Span arrangements**3.5** Articulation arrangements**3.6** Road restraint systems requirements**3.7** Proposed arrangements for Inspection for Assessment**3.7.1** Traffic management

Part 2 Specific Requirements

---

3.7.2 Arrangements for future maintenance and inspection of structure.  
Access arrangements to structure.

3.7.3 Intrusive or further investigations proposed

**3.8** Environment and sustainability

**3.9** Durability. Materials strengths assumed and basis of assumptions <sup>4</sup>

**3.10** Risks and hazards considered for design, execution, maintenance and demolition  
Consultation with and/or agreement from CDM co-ordinator <sup>5</sup>

**3.11** Year of construction

**3.12** Reason for assessment

**3.13** Part of Structure to be assessed

**4 ASSESSMENT CRITERIA**

**4.1** Actions

4.1.1 Permanent actions

4.1.2 Snow, Wind and Thermal actions

4.1.3 Actions relating to normal traffic under AW regulations and C&U  
regulations <sup>6</sup>

4.1.4 Actions relating to General Order traffic under STGO regulations <sup>7</sup>

## Part 2 Specific Requirements

## 4.1.5 Footway or footbridge variable actions

4.1.6 Actions relating to Special Order traffic, provision for exceptional abnormal indivisible loads including location of vehicle track on deck cross-section<sup>8</sup>

## 4.1.7 Accidental actions

## 4.1.8 Actions during execution

4.1.9 Any special actions not covered above<sup>9</sup>4.2 Heavy or high load route requirements and arrangements being made to preserve the route, including any provisions for future heavier loads or future widening<sup>10</sup>

## 4.3 Minimum headroom provided

## 4.4 Authorities consulted and any special conditions required

## 4.5 Standards and documents listed in the Technical Approval Schedule

Refer to Annex A

## 4.6 Proposed Departures from standards given in 4.5

## 4.7 Proposed Departures relating to methods for dealing with aspects not covered by standards in 4.5

**5 STRUCTURAL ANALYSIS**5.1 Methods of analysis proposed for superstructure, substructure and foundations<sup>11, 12</sup>

## Part 2 Specific Requirements

**5.2** Description and diagram of idealised Structure to be used for analysis

**5.3** Assumptions intended for calculation of structural element stiffness

**5.4** Proposed range of soil parameters to be used in the assessment of earth retaining elements <sup>13</sup>

## **6 GEOTECHNICAL CONDITIONS**

**6.1** Acceptance of recommendations of the Geotechnical Design Report to be used in the assessment and reasons for any proposed changes

**6.2** Summary of design for highway Structure in the Geotechnical Design Report

**6.3** Differential settlement to be allowed for in the assessment of the Structure

**6.4** If the Geotechnical Design Report is not yet available, state when the results are expected and list the sources of information used to justify the preliminary choice of foundations <sup>14</sup>

## **7 CHECKING**

**7.1** Proposed Category

**7.2** Name of proposed Category 3 Checker

**8 DRAWINGS AND DOCUMENTS**

**8.1** List of drawings (including numbers) and documents accompanying the submission <sup>15</sup>

ANNEX A - Technical Standards Schedule <sup>16</sup>

ANNEX B - Diagram of idealised structural analysis model

ANNEX C - Departures from Standards

ANNEX D - Drawings

**9 THE ABOVE ACCURATELY REFLECTS THE ASSUMPTIONS USED FOR ASSESSMENT OF THIS STRUCTURE**

Part 2 Specific Requirements

---

**Notes**

- 1 *Delete as appropriate.*
- 2 *For a bridge, give over and/or under.*
- 3 *Include weight, height, width and any environmental restrictions at or adjacent to the bridge.*
- 4 *Give material strengths from record drawings or intrusive investigation. For all material strengths given, list the relevant codes/standards.*
- 5 *List only risks and hazards that would not be apparent to an experienced and competent Contractor or are likely to require special attention to manage them effectively. Where possible and practicable, the identified potential risks and hazards shall be eliminated or minimised during the design stage. Designers shall name the CDM co-ordinator and confirm that the CDM co-ordinator has reviewed the risks and hazards identified in the AIP and is satisfied.*
- 6 *e.g. HA Loading*
- 7 *e.g. HB or SV loading*
- 8 *e.g. Individual vehicle which includes the following information as applicable:*
  - a) *Gross weight of the vehicle in tonnes and vehicle type and number;*
  - b) *Axle load and spacing (longitudinally and transversely);*
  - c) *Air cushion in tonnes over area applied in m x m; and*
  - d) *Single or twin tyres and wheel contact areas.*
- 9 *e.g. seismic action, atmospheric icing, floating debris etc.*
- 10 *The heavy or high load route requirements should be confirmed with Transport Scotland.*
- 11 *List the main structural elements for superstructure, substructure and foundation.*
- 12 *Factors of Safety are required where limit state design codes are not used.*
- 13 *For assessment of existing Structures, where no such geotechnical information is available, suggested earth pressure coefficient values given in relevant DMRB parts should be used instead.*
- 14 *When the Geotechnical Design Report becomes available, an addendum to the SDS, covering section 6, must be submitted to the Contracting Authority. The addendum must have its own sections 8 and 9 to provide a list of drawings, documents and signatures.*
- 15 *Where appropriate, also include:*
  - a) *Relevant extracts from the Geotechnical Design Report;*
  - b) *Methods of dealing with aspects not covered by Standards; and*
  - c) *Relevant correspondence and documents from consultations.*
- 16 *The relevant Assessment Standards are given in the Design Manual for Roads and Bridges (DMRB).*
- 17 *CEng, MICE, MStructE or equivalent.*

## **STRUCTURES DESIGN STATEMENT**

### **ANNEX A**

#### **Technical Standards Schedule for Assessment**

**This page is blank**

## Part 2 Specific Requirements

It is the responsibility of the compiler of the Structures Design Statement and/or the assessment or check certificate compiler to ensure that the Standards, references and clauses used - including amendments and corrigenda are relevant and current at the Base Date.

Documents in *italics* are under preparation at the time of publication of this document.

All Standards and Documents not used shall be struck through.

### Schedule of Documents Relating to Assessment of Highway Bridges and Structures

| British Standards        |                                                                                                                                            |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| BS 4449:2005 + A2:2009   | Steel for the reinforcement of concrete – Weldable reinforcing steel – Bar, coil and decoiled product – Specification                      |
| BS 4483:2005             | Steel fabric for the reinforcement of concrete – Specification                                                                             |
| BS 5896:2012             | High tensile steel wire and strand for the prestressing of concrete – Specification                                                        |
| BS 6779-4:1999           | Highway parapets for bridges and other structures – Part 4: Specification for parapets of reinforced and unreinforced masonry construction |
| BS 7818:1995             | Specification for pedestrian restraint systems in metal                                                                                    |
| BS 8006-1:2010           | Code of practice for strengthened / reinforced soils and other fills                                                                       |
| BS 8500-1:2006 + A1:2012 | Concrete – Complementary British Standard to BS EN 206-1 Part 1: Method of specifying and guidance for the specifier                       |
| BS 8666:2005             | Scheduling, dimensioning, bending and cutting of steel reinforcement for concrete – Specification                                          |
| BS EN 10025-1:2004       | Hot rolled products of structural steels – Part 1: General technical delivery conditions                                                   |
| BS EN 10025-2:2004       | Hot rolled products of structural steels – Part 2: Technical delivery conditions for non-alloy structural steels                           |

## APPENDIX L

## REINFORCED SOIL DIMENSIONAL TOLERANCES AND DEFORMATION LIMITS

REINFORCED SOIL STRUCTURES - DESIGN VALUES OF CONSTRUCTION  
MOVEMENT TOLERANCES TO BE EQUALLED OR BETTERED**Tolerances for faces of retaining walls and abutments**

| Location of plane of Structure | Tolerance $\pm$ 50 mm                |
|--------------------------------|--------------------------------------|
| Verticality                    | $\pm$ 5 mm per metre height          |
| Bulging (vertical)             | $\pm$ 20 mm in 4.5 m template        |
| Bowing (horizontal)            | $\pm$ 20 mm in 4.5 m template        |
| Steps at Joints                | $\pm$ 10 mm                          |
| Alignment along top            | $\pm$ 15 mm from reference alignment |

**Serviceability limits on post construction internal strains for bridge abutments and retaining walls**

| Structure        | Strain (percent) |
|------------------|------------------|
| Bridge Abutments | 0.5              |
| Walls            | 1.0              |

**Minimum vertical movement capacities required for facing system to cope with vertical internal settlement of reinforced fill**

| Structure form  | Minimum vertical movement capacity                 |
|-----------------|----------------------------------------------------|
| Discrete Panels | Joint closure of 1 in 150 relative to panel height |

The Designer shall state the Design Values used in the Structure Design Statement for each reinforced soil structure.

**Methodology for Measuring Tolerances**

The Designer shall define the methodology to be used in the Structure Design Statement for each reinforced soil structure.

REQUIREMENTS FOR PRIVATE WATER SUPPLIES (PWS)**

**THIS IS APPENDIX N TO PART 2 OF THE NEW WORKS INFORMATION**

**This page is blank**

## Part 2 Specific Requirements

**Screening**

A number of PWS have been recorded in the proximity of the New Works. The known PWS have been screened and assessed to consider the potential impact of the New Works on these PWS. The phases of assessments were:

- (i) Phase 1: Initial screening in the Environmental Statement (Jacobs, 2007);
- (ii) Phase 2: PWS Field Survey Reports (Jacobs, 2007/08) reporting on PWS survey phase and updating Environmental Statement screening on PWS identified at risk in Phase 1;
- (iii) Phase 3: PWS Assessment Programme Hydrogeological Reports (Jacobs, 2012) undertaken on PWS identified at risk in Phase 2; and
- (iv) Phase 4: PWS Monitoring Documents (Jacobs, 2013) for monitoring undertaken 12 months prior to construction of New Works.

A summary of the PWS assessments undertaken and mitigation identified at each individual PWS are provided in Table 1 below. The Company shall update Table 1 as appropriate to include the outcomes of an updated screening of their Design. The updated Table 1 shall form the basis of the mitigation measures to be implemented and is subject to approval by the Contracting Authority.

The Company shall be responsible for undertaking the PWS Mitigation outlined in Table 1 at each PWS as a minimum and shall take into account the above referenced documents in the design of PWS which will or may be impacted by the New Works.

PWS have been assigned an identification code that shall be adopted by the Company.

**Guidance**

The Company shall comply with published guidelines, including but not limited to those contained within the following documents:

- SEPA Regulatory Method (WAT-RM-11) Licensing groundwater abstractions including dewatering - v3 June 2010
- SEPA Regulatory Method (WAT-RM-26) Determination of Aquifer Properties - V2 Oct 2009
- SEPA Regulatory Method (WAT-RM-16) Hydrogeologist Input to groundwater abstraction assessment - V3 June 2012
- SEPA Regulatory Method (WAT-RM-24) Pumping test methodology - V3 June 2010
- SEPA Regulatory Method (WAT-RM-27) Modelling methods for groundwater abstractions - V2 Oct 2009
- SEPA An applicant guide to water supply - V1 May 2010

## Part 2 Specific Requirements

Table 1 - Summary of PWS Assessments and Mitigation Requirements by the Company

| Private Water Supply ID Code | Summary of PWS Assessments                                                                                                 |                                                                                                         |                                                                                                        | Mitigation Requirements                                                                                                                                                                                                                                                                                                                                                                 |

Part 2 Specific Requirements

---

*Method Statement*

The Company shall prepare a method statement for approval by the Contracting Authority, which describes the procedure to be implemented to ensure that a water supply is maintained. The method statement should include matters described herein.

*Requirements for Temporary Water Supplies*

1. The Company shall put in place an emergency procedure to provide temporary water supplies should a PWS be impacted, including an effective channel of communication for land owners to notify the Company of any construction impacts on their PWS, to include a 24 hour hotline phone number.
2. The Company shall be responsible for investigating claims of impacts on PWS, determining whether the impacts are short or long term and attempting replacement or providing mains connection depending on requirements for the individual PWS as described in Table 1.
3. The Company shall be responsible for determining the capacity requirements for temporary water supply at each PWS where necessary.
4. The Company shall provide temporary water storage tanks, where deemed necessary, from Water Direct ([www.water-direct.co.uk](http://www.water-direct.co.uk)) or similar approved supplier, to the quality required to supply those landowners affected by the New Works and for the period until a PWS is installed or reinstated as required.
5. The Design shall ensure that diversions for Undertakers and owners of private apparatus shall be undertaken in a manner which shall minimise the risk of spillage or release into watercourses, ditches or surface drains.

*PWS Replacement*

6. The Company shall provide a programme for the replacement of PWS which reflects the requirements of the overall construction programme and clearly indicates the provision and duration of temporary water supply where required, pump tests for determining sustainability of replacement PWS and replacement PWS approval process.
7. For PWS replacement the method statement shall include:
  - provisions for access, site restoration and communications with land owners/ tenants;
  - methods for on-site testing for alternative supplies to include pump tests;
  - provisions for demonstrating new sources are suitable, sustainable and will not be impacted by the New Works, to be supported by monitoring data; and
  - Groundwater quality testing to include suite and frequency.
8. Baseline monitoring of PWS usage, undertaken for 12 months prior to commencement of construction of the New Works, shall be made available to the Company to assist in replacement design.
9. The Company shall attempt to locate a suitable and sustainable alternative source of water to match each land owner's or tenant's existing need in accordance with relevant

Part 2 Specific Requirements

---

Regulations. The Company shall also take account of any additional occupancy information provided by the land owner's or tenant's, to complement monitoring records from the twelve months monitoring period.

10. The Company shall allow for undertaking up to two attempts at replacing the PWS and these attempts shall include pump tests in accordance with relevant Regulations. The PWS replacements are anticipated to be drilled wells but alternative methods of replacement may be considered by the Company in agreement with the Contracting Authority.
11. The Company shall endeavour to undertake PWS replacement within the PWS user land boundary. Where replacement PWS locations result in a network connection route which would traverse land owned by the Scottish Ministers the proposed replacement attempt locations shall be approved by the Contracting Authority.
12. The Company shall ensure that the alternative supply is suitable, sustainable and shall not be impacted by the New Works.
13. The Company shall have regard to the current guidance and requirements for Abstraction CAR Licencing where the Company is required to obtain CAR Licences for PWS replacement works.
14. Should the second replacement attempt be unsuccessful, the Company shall undertake public water mains connection as detailed below.
15. The methods of PWS replacement are to be approved by the Contracting Authority.

*PWS Monitoring*

16. The Method Statement shall include details pertaining to the following monitoring requirements:
  - undertaking monitoring during construction works to include monitoring locations and programme;
  - the frequency of sampling, testing and down-loading of data, and;
  - procedures for monitoring the PWS to ensure that any construction impact is detected.
17. Monitoring shall include continuous hydrogeological flow and monthly hydrogeological water quality monitoring at a number of PWS locations. Monitoring shall be undertaken by others for a period of 12 months prior to construction. The position (coordinates and levels) of monitoring locations may adjust from those proposed. However, the number of locations shall remain as per the details below as a minimum.
18. Monthly in-situ water quality testing is required at a number of PWS locations to include:
  - pH;
  - temperature; and
  - Electrical Conductivity.

## Part 2 Specific Requirements

19. The Company shall record all in-situ water quality test results and provide to the Contracting Authority within one week of sampling.
20. The Company shall appoint an UKAS Accredited Laboratory to undertake monthly and quarterly water quality testing based on the current PWS usage in accordance with Tables 2 and 3 below.

| <b>Monthly testing suite</b>                                                            |                        | <b>Quarterly testing suite</b> |
| Temperature                                                                             | Iron                   | <i>monthly suite plus...</i>   |
| Electrical Conductivity                                                                 | Copper                 | Cadmium                        |
| pH                                                                                      | Lead                   | Nickel                         |
| Redox                                                                                   | Zinc                   | Polyaromatic Hydrocarbons      |
| Dissolved Oxygen                                                                        | Bromide                | Ammoniacal Nitrogen            |
| Calcium                                                                                 | Chloride               | Total Petroleum Hydrocarbons   |
| Sodium                                                                                  | Sulphate               | Escherichia coli (E. coli)     |
| Potassium                                                                               | Soluble Nitrate        | Pesticides                     |
| Magnesium                                                                               | Total Dissolved Solids |                                |
| Aluminium                                                                               | Total Nitrogen         |                                |

## Part 2 Specific Requirements

21. The Company shall provide the Contracting Authority with all monitoring data in Microsoft Excel format and certified laboratory certificates in hard copy format within two weeks of each monthly monitoring site visit.
22. The number of PWS monitoring locations shall be, as a minimum, as noted below and shown on drawing numbers B1033200/ADW/3000/W/PWS/001 to 043 :

| Requirement by the Company                                                                                                                            | Number | Comment                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|--------|---------------------------------|
| Number of Hydrogeological Flow Monitoring Locations                                                                                                   | 22     |                                 |
| Number of Hydrogeological Groundwater Level Monitoring Locations                                                                                      | 3      | PWS N21c<br>PWS F43<br>PWS N22a |
| Number of Hydrogeological Water Quality Monitoring Locations                                                                                          | 19     |                                 |
| Number of PWS networks for which replacement shall be attempted and if unsuccessful networks which should be connected to mains                       | 8      |                                 |
| Number of PWS networks to be monitored and if impacted it is not capable of replacement and will require mains connection                             | 1      | PWS S45                         |
| Number of PWS networks to be monitored and if impacted may be capable of PWS replacement if unsuccessful networks which should be connected to mains. | 11     |                                 |
| Number of PWS networks to be monitored and if impacted no further action required as already have mains connection                                    | 1      | PWS N5b                         |

*Public Water Mains Connections*

23. In the event that a replacement PWS is not successfully achieved at a location where replacement is attempted, the Company shall liaise with the Contracting Authority, who shall be responsible for arranging connection of the PWS to the public water supply network. Pending completion of such connection works the Company shall arrange for and maintain a suitable temporary supply of water to the location concerned.

**APPENDIX O - CONTAMINATION AND MITIGATION**

**THIS IS APPENDIX O TO PART 2 OF THE NEW WORKS INFORMATION**

**This page is blank**

*Guidelines*

1. The Company shall comply with published guidelines, including but not limited to those contained within the following documents:
  - Guidelines for Environmental Risk Assessment and Management, published by the Department of the Environment, Transport and the Regions (DETR), the Environment Agency and the Institute for Environment and Health, 2000;
  - Contaminated Land Report 11 (CLR 11), Model Procedures for the Management of Land Contamination, Environment Agency, 2004;
  - Land Contamination Risk Assessment. A guide to good practice, Construction Industry Research and Information Association (CIRIA) C552, 2001;
  - Assessing risks posed by hazardous ground gases to buildings, CIRIA C665, 2007;
  - Guidance on Comparing Soil Contamination Data and a Critical Concentration; CL:AIRE, SAGTA and the Chartered Institute of Environmental Health (CIEH) May 2008;
  - Groundwater risk assessment guidance and tools including:
    - ConSim, Remedial Targets Methodology – Hydrogeological Risk Assessment for Land Contamination, Environment Agency, 2006;
    - Benchmarking and Guidance on the Comparison of selected Groundwater Risk Assessment Models, 2001;
    - National Groundwater and Contaminated Land Centre Report NL/00/14; and
    - Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination, Guidance on Pollution Prevention, Report NC/99/73, published by the Environment Agency, 2001.
2. The Company shall take full account of the information provided in the Contaminated Land Drawings Figures 1a to 1r inclusive, included in the Information Room, in the design, construction and maintenance of the New Works.

**This page is blank**

**APPENDIX P - HYDROGEOLOGICAL AND HYDROLOGICAL MONITORING OF  
SENSITIVE ENVIRONMENTAL SITES (SES)**

**THIS IS APPENDIX P TO PART 2 OF THE NEW WORKS INFORMATION**

**This page is blank**

Part 2 Specific Requirements

---

1. The design of the New Works shall ensure that no adverse impact occurs as a result of the construction of the scheme. Furthermore, the Company shall ensure protection to the following three Sensitive Environmental Sites/ ecological sites:

- (i) Corby and Lily Loch;
- (ii) Hare Moss; and
- (iii) Fishermyre.

Site specific information regarding each site is detailed herein. Further information is available in the environmental documentation.

2. The Company shall take cognisance of the information contained in this Appendix as part of the design.

*Monitoring Requirements*

3. Monitoring at SES locations shall include:
  - continuous flow/ level monitoring and recording using dataloggers of surface water levels in open channels;
  - water levels in lochs;
  - groundwater levels in standpipes;
  - rainfall data using rain gauges;
  - in-situ water quality monitoring; and
  - sampling of water for analytical laboratory testing.
4. The Company shall undertake monthly site visits to each monitoring equipment installation to download recorded data, take in-situ water quality testing, sample water for water quality laboratory testing, take in-situ level readings and check that all equipment is functioning correctly.
5. The Company shall be responsible for undertaking water quality monitoring at SES as follows:
  - (i) Monthly in-situ water quality testing at 20 locations, using field kit equipment for the following parameters:
    - pH;
    - temperature; and
    - Electrical Conductivity.
  - (ii) Monthly water sampling at the 20 locations for analytical laboratory analysis in an UKAS Accredited Laboratory (appointed by the Company).
6. The Company shall record all in-situ water quality test results and deliver them to the Contracting Authority within one week of testing.
7. The suites of water quality parameters to be tested in the laboratory are provided in Table 1.

## Part 2 Specific Requirements

**Table 1 – Analytical water quality testing suites**

| <b>Suite 1</b>          | <b>Suite 2</b>         | <b>Suite 3</b>               |
|-------------------------|------------------------|------------------------------|
| Temperature             | <i>Suite 1 plus...</i> | <i>Suite 2 plus...</i>       |
| Electrical Conductivity | BOD                    | Carbonate                    |
| pH                      | COD                    | Bicarbonate                  |
| Redox                   | Suspended Solids       | Arsenic                      |
| Dissolved Oxygen        |                        | Cadmium                      |
| Calcium                 |                        | Chromium                     |
| Sodium                  |                        | Nickel                       |
| Potassium               |                        | Selenium                     |
| Magnesium               |                        | Vanadium                     |
| Aluminium               |                        | Total Petroleum Hydrocarbons |
| Iron                    |                        | Polyaromatic Hydrocarbons    |
| Copper                  |                        | Ammoniacal Nitrogen          |
| Lead                    |                        |                              |
| Zinc                    |                        |                              |
| Bromide                 |                        |                              |
| Chloride                |                        |                              |
| Sulphate                |                        |                              |
| Nitrate                 |                        |                              |

## 8. The frequency of testing shall be (as a minimum):

- Suite 1 – monthly
- Suite 2 – quarterly
- Suite 3 – six monthly

The Company shall confirm the proposed increase in monitoring frequency in the method statement, for approval by the Contracting Authority, to accord with the programme and level of activity in the vicinity of each site, to give assurance that no adverse impact has occurred.

## 9. The Company shall provide the Contracting Authority with all monitoring data in a readable electronic format to include Microsoft Excel and certified laboratory certificates in hard copy format within two weeks of each monthly monitoring site visit.

## Part 2 Specific Requirements

**SITE SPECIFIC INFORMATION****HARE MOSS SES***Introduction*

1. A section of the proposed AWPR/B-T lies within the catchment area of Hare Moss SES, which is classified as degraded lowland raised bog and presently used as rough grazing. Location of Hare Moss SES is provided in the environmental documentation on Drawing B1033200/ADW/3000/W/PWS/024.

*Proposed Monitoring Locations*

2. The proposed monitoring locations are indicated on Drawing B1033200/ADW/3000/W/PWS/025 provided in the environmental documentation. Monitoring shall be undertaken by others for a period of 12 months prior to construction. The position (coordinates and levels) of monitoring locations may adjust from those proposed. However, the number of locations will remain as per the details below.

*Site 1: Burn of Ardoe – Hydrological Inflow and Water Quality Monitoring*

3. The purpose of the flow gauging is to monitor the inflow to the Hare Moss SES from the Burn of Ardoe. The water quality monitoring point shall be located at the same position as the flow monitoring location.

*Site 2: Hydrological Rainfall Gauge*

4. Rainfall measurements shall be undertaken in close proximity to the northern borehole network. This is to comprise a standard storage gauge and an automatic tipping bucket rain gauge.

*Groundwater Standpipes - Hydrogeological Groundwater Level and Water Quality Monitoring*

5. Groundwater level and water quality monitoring is required in four groundwater monitoring standpipes installed at Hare Moss SES. The locations and characteristics of these monitoring standpipes are provided in Table 2 below.

**Table 2: Groundwater Monitoring Description**

| <b>Borehole Reference</b> | <b>OS Grid Ref.</b> | <b>Screen Zone Depth (mbgl)</b>  | <b>Screen Zone Geology</b> | <b>Internal Diameter of Installation (mm)</b> |
|---------------------------|---------------------|----------------------------------|----------------------------|-----------------------------------------------|
| BHHM002                   | NO 90884 99564      | 0.7 to 1.7                       | Peat                       | 50                                            |
| BHHM003                   | NO 91020 99538      | 1 to 1.9                         | Peat                       | 50                                            |
| BHHM004                   | NO 90814 99239      | 0.5 to 0.7                       | Peat                       | 50                                            |
| BHB*(proposed)            | Near NO 90934 99393 | 1 to 2 (to be confirmed on site) | Peat                       | 50                                            |

\* borehole number and OS grid reference to be confirmed.

6. Within each standpipe groundwater levels shall be continuously recorded to allow an assessment of the local groundwater levels. This shall be downloaded monthly by the *Contractor* and a manual measurement shall also be taken. Any recalibration or reinstallation shall be undertaken at the same site visit, if found necessary.

## Part 2 Specific Requirements

**FISHERMYRE WETLAND SES***Introduction*

1. A section of the proposed AWPR/B-T lies within the catchment area of Fishermyme Wetland SES. Location of Fishermyme Wetland SES is provided in the environmental documentation on Drawing B1033200/ADW/3000/W/PWS/026.

*Proposed Monitoring Locations*

2. The proposed monitoring locations are indicated on Drawing B1033200/ADW/3000/W/PWS/027 provided in the environmental documentation. Monitoring shall be undertaken by others for a period of 12 months prior to construction. The position (coordinates and levels) of monitoring locations may adjust from those proposed. However, the number of locations will remain as per the details below.

*Site 1: Green Burn – Hydrological Outflow and Water Quality Monitoring*

3. The purpose of the flow gauging is to monitor the outflow from Fishermyme Wetland SES on Green Burn. The water quality monitoring point shall be located at the same location as the flow monitoring location.

*Site 2: Fishermyme Inflow – Hydrological Inflow and Water Quality Monitoring*

4. The purpose of the flow gauging is to monitor the inflow to Fishermyme Wetland SES. The water quality monitoring point shall be located at the same position as the flow monitoring location.

*Site 3: Hydrological Rainfall Gauge*

5. Rainfall measurement shall be undertaken in close proximity to the groundwater monitoring borehole FLBH053E. This shall comprise a standard storage gauge and automatic tipping bucket rain gauge.

*Groundwater Standpipes: Hydrogeological Groundwater Level and Water Quality Monitoring*

6. Groundwater level and water quality monitoring is required in five groundwater monitoring standpipes installed at Fishermyme Wetland SES. The locations and characteristics of these monitoring standpipes are provided in Table 3 below.

**Table 3: Groundwater Monitoring Description**

| <b>Borehole Reference</b> | <b>OS Grid Ref.</b> | <b>Screen Zone Depth (mbgl)</b> | <b>Screen Zone Geology</b> | <b>Internal Diameter of Installation (mm)</b> |
|---------------------------|---------------------|---------------------------------|----------------------------|-----------------------------------------------|
| FLBH053A                  | NO 86842 90430      | 0.3 to 1.5                      | Peat, sand and gravel      | 50                                            |
| FLBH053B                  | NO 86843 90453      | 0.3 to 1                        | Peat, sand and gravel      | 50                                            |
| FLBH053C                  | NO 86904 90442      | 0.2 to 1.2                      | Peat, sand and gravel      | 50                                            |
| FLBH053D                  | NO 86959 90441      | 0.3 to 1.45                     | Sand and gravel            | 50                                            |
| FLBH053E                  | NO 86977 90422      | 0.2 to 1                        | Sand and gravel            | 50                                            |

\* Borehole number and OS grid reference to be confirmed.

7. Within each standpipe groundwater levels shall be continuously recorded to allow an assessment of the local groundwater levels. This shall be downloaded monthly by the Company and a manual measurement shall also be taken, with any recalibration or reinstallation undertaken if found to be necessary

## **CORBY LOCH AND LILY LOCH SES**

### *Introduction*

1. A section of the proposed AWPR/B-T lies within the catchment area of Corby Loch and Lily Loch SES. Corby Loch has a catchment area of 3.6km<sup>2</sup> and has been designated a Site of Special Scientific Interest (SSSI) and Lily Loch has a catchment area of 1.2km<sup>2</sup> and has also been designated a SSSI. Location of Corby Loch and Lily Loch SES is provided in the environmental documentation on Drawing B1033200/ADW/3000/W/PWS/028.

### *Proposed Monitoring Locations*

2. The proposed monitoring locations are indicated on Drawing B1033200/ADW/3000/W/PWS/029 provided in the environmental documentation. Monitoring shall be undertaken by others for a period of 12 months prior to construction. The position (coordinates and levels) of monitoring locations may adjust from those proposed. However, the number of locations will remain as per the details below.

#### *Site 1: Main Inflow to Corby Loch – Hydrological Inflow and Water Quality Monitoring*

3. The purpose of the flow gauging is to monitor the inflow into Corby Loch SES. The water quality monitoring point shall be located at the same position as the flow monitoring location.

#### *Site 2: Corby Loch – Loch Water Level and Water Quality Monitoring*

4. The purpose of the water level gauge is to monitor the loch water level within Corby Loch SES. The water quality monitoring point shall be located at the same position as the level gauge monitoring location.

#### *Site 3: Main Inflow to Lily Loch – Loch Inflow and Water Quality Monitoring*

5. The purpose of the flow gauging is to monitor the inflow into Lily Loch SES. The water quality monitoring point shall be located at the same position as the flow monitoring location.

#### *Site 4: Lily Loch – Loch Water Level and Water Quality Monitoring*

6. The purpose of the level gauge is to monitor the loch level within Lily Loch SES. The water quality monitoring point shall be located at the same position as the level gauge monitoring location.

#### *Site 5: Hydrological Rainfall Gauge*

7. Rainfall measurement shall be undertaken in close proximity to the flow monitoring location and shall comprise a standard storage gauge and an automatic tipping bucket rain gauge.

#### *Groundwater Standpipes: Hydrogeological Groundwater Level and Water Quality Monitoring*

8. Groundwater level and water quality monitoring is required in four groundwater monitoring standpipes installed at Corby Loch and Lily Loch SES. The locations and characteristics of these monitoring standpipes are provided in Table 4 below.

## Part 2 Specific Requirements

| BHA*                      | Near NJ<br>92174 14587 | 0.5 - 3                         | Peat only                                      | 50                                            | target peat only       |

\* Borehole number and OS grid reference to be confirmed.

9. Within each standpipe groundwater levels shall be continuously recorded to allow an assessment of the local groundwater levels. This shall be downloaded monthly by the *Contractor* and a manual measurement shall also be taken. Any recalibration or reinstallation shall be undertaken at the same site visit, if found necessary.

## **1 General Requirements**

### **1.1 Introduction**

- 1.1.1 Intelligent Transport Systems (ITS) are technology systems / facilities that assist road network operators in providing an efficient, reliable and safe transport network. This is achieved by deploying temporary controlling and information responses at a strategic or local level to complement the fixed route signing. These responses therefore manage normal, planned or unplanned conditions on the road network but can also be used to influence traveller's behaviour and deliver policy objectives. This is achieved for the trunk road network in Scotland through Transport Scotland's Traffic Scotland Service (TSS). The TSS is described in APPENDIX F.
- 1.1.2 To enhance the TSS additional ITS facilities will be deployed on the trunk road network through the AWPR/B-TDBFO contract. The Company shall design, install and commission the additional facilities that include:
- (a) Variable Message Signs (VMS) to display strategic and tactical text messages and / or multi-coloured pictograms to drivers. These are located in advance of the key junctions, or network decision points;
  - (b) Closed Circuit Television (CCTV) monitoring to provide full coverage of the corridor at the key junctions and for visual monitoring by TSS operators and other parties that the CCTV images are shared with;
  - (c) Traffic monitoring and measurement system to gather traffic data, via subsurface induction loops, for the National Traffic Data Service (NDS). This service includes Weigh-in-Motion (WIM) measurement facilities. These facilities are generally located at the mid-point of network links;
  - (d) Journey Time (JT) facilities at the ends of network links/ key junctions to collate information to implement control strategies and for statistical analysis purposes;
  - (e) Communication network to provide the backbone for all ITS implementations whether it is for local connections between roadside equipment and cabinets or long distance connections between a control centre and the roadside. The communications network shall be installed in a duct system and shall be based on a fibre cable backbone; and
  - (f) Electrical power network.
- 1.1.3 The Contracting Authority will act on behalf of Transport Scotland in the enhancement to the TSS as detailed in this Part 3.
- 1.1.4 The Contracting Authority shall arrange for the provision of the technology components and software systems for the ITS facilities, known as Active Equipment, as detailed in Appendix A for installation and commissioning by the Company. The Company shall be required to provide the infrastructure necessary to support the Active Equipment. This infrastructure is known as the Passive Network.
- 1.1.5 Prior to the TSS similar functionality was provided through the National Driver Information and Control System (NADICS). A number of existing documents, specifications and drawings may refer to NADICS. The terms NADICS and TSS are equivalent in all documentation.
- 1.1.6 Additional requirements relating to ITS are included in Schedule 2: Part 2, which in summary covers general requirements and also specific requirements for Structures (VMS

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

foundations), vehicle restraint systems, road lighting, maintenance access, hard landscaping and ancillary items.

## **1.2 Existing ITS Facilities**

1.2.1 The TSS has existing Traffic Scotland Equipment (TSE) located on the trunk road network including VMS, NDS, power and communication networks. The Company shall design, provide, install and commission the ITS facilities without compromising the ability to deliver the TSS through the existing TSE.

1.2.2 In providing the ITS facilities the Company will need to upgrade, decommission and integrate with existing TSE. The requirements for existing TSE are detailed in Section 3.3 and 3.4.

1.2.3 The Company shall undertake the same obligations relating to TSE for all ITS equipment that belongs to, or is under the control of Aberdeen City Council and Aberdeenshire Council.

## **1.3 Provision of the ITS Works**

1.3.1 The Company shall:

- (a) prepare a "Strategy of ITS New Works for Traffic Scotland Equipment Document" in accordance with APPENDIX E of this Part 3 for submission to and approval by the Contracting Authority prior to undertaking any site installation of TSE;
- (b) design the TSE and supporting roadside infrastructure to deliver the ITS facilities detailed in this Part 3. This shall include a communication network that shall connect the TSE to the Traffic Scotland National Control Centre (TSNCC) through roadside cabinets, two core IP switch transmission stations and two third party communication links;
- (c) provide the Passive Network and install the Active Equipment that incorporates Transport Scotland Issued Equipment (TSIE);
- (d) test and commission all TSE in accordance with the Specification and Section 10 and ensure that the TSE is operational both on the Site and from the TSNCC; and
- (e) provide training and documentation to permit handover of the TSE to the TSS for transfer to the live TSS network. The Company shall assist the TSS in the integration of new TSE in accordance with Section 10.9.

1.3.2 The Contract Drawings listed in Schedule 2: Part 4 comprise both specific requirements and standard details of non-site specific installations of standard equipment and site layouts. The Company shall use both the specific requirements and these standard details to prepare site specific layouts to meet the New Works Requirements and Specification. Where these standard details cannot be achieved the Company shall consult and comply with the requirements of the Contracting Authority

1.3.3 The Contracting Authority shall arrange for the provision of only the TSIE as detailed in APPENDIX A of this Part 3 required to complete the New Works. Unless otherwise specified, the Company shall provide all other TSE necessary to complete the New Works.

## **1.4 Extent of New Works**

1.4.1 The extent of the ITS works are within the Land Made Available as detailed in Schedule 2: Part 2 and Schedule 2: Part 4 Appendix 1/7.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

1.4.2 The Company is required to connect and interface with TSE outside the LMA to complete the ITS works and this shall be achieved with minimal planned disruption to the existing TSE and TSS. This TSE includes but is not limited to communications networks, power supply cabinets, TSE cabinets and the control system and equipment in the TSNCC. Access to these locations will be arranged by the Contracting Authority.

**1.5 Electrical Supply**

1.5.1 The Company shall provide power supplies and the power supply distribution network to all new TSE sites in accordance with Section 5.3.

1.5.2 In planning the implementation of the ITS works the Company shall note the requirements of Section 4.1.11 and ensure sufficient lead-in times are allowed in the works programme for the procurement of mains electricity from the supply company.

1.5.3 The Company shall report on a monthly basis to the Contracting Authority the status of each power supply for TSE using the tracker template detailed in APPENDIX D.

## **2 Consultation and Third Parties**

### **2.1 General**

- 2.1.1 The TSS has a number of equipment and service providers as described in APPENDIX F of this Part 3. The Company shall consult and comply with the requirements of the Contracting Authority regarding liaison with TSS equipment and service providers required to complete the works detailed in this Part 3. In addition, the Company shall consult and comply with the Contracting Authority with regard to the interface between the TSS equipment provided as TSIE and the Passive Network, provided by the Company, in respect of weight, size, fixing arrangements and the like.
- 2.1.2 The TSS involves close liaison with other parties involved in operating the network in Scotland. The parties that work closely with the TSS to provide a coordinated response to the management of incidents and deliver route guidance are Aberdeen City Council, Aberdeenshire Council, the Police and Trunk Road Operating Companies. The Company shall consult and comply with the requirements of Aberdeen City Council and Aberdeenshire Council regarding existing ITS equipment that belongs to, or is under the control of them and the interface with the New Works.
- 2.1.3 The Company shall provide a communication network that is fully compatible with the TSS existing communication network, including the third party links between the transmission stations and the TSNCC. The Company shall consult and comply with the requirements of the Contracting Authority regarding details of the communications network design and provision.

### **3 Traffic Scotland Equipment**

#### **3.1 General**

3.1.1 Not used

3.1.2 Not Used

3.1.3 The Contracting Authority will arrange the modifications as required to the instation at the TSNCC, to operate the TSE and modify or develop applications as necessary to accommodate the TSIE. To allow the Contracting Authority to make the necessary arrangements for modifications to existing TSE equipment the Company shall provide to the Contracting Authority the following information at least six months prior to the the modified instation being required to operate/test any New Works,:

- (a) Ordnance Survey grid reference coordinates and details of changes in lane configuration and lane relationships along the length of the road;
- (b) Ordnance Survey grid reference coordinates and details of changes in the default speed limit of traffic along the length of the road,
- (c) Ordnance Survey grid reference coordinates and dimensions, where applicable, of maintenance access gates, maintenance access slips and maintenance hard standings;
- (d) Ordnance Survey grid reference coordinates and road alignment details to allow the new road to be overlaid on the Traffic Scotland operational instation geographical mapping;
- (e) Ordnance Survey grid reference coordinates of all TSE equipment and its cross sectional position; and
- (f) a schedule of all TSE with chainage and equipment reference names in accordance with Appendix B.

Any updates required to the information detailed in (a) to (f) above, shall be undertaken by the Company and provided to the Contracting Authority within 10 working days of any change to the Company's design being finalised.

3.1.4 To allow the Contracting Authority to order TSIE and arrange all modifications and configurations described in Section 3.1.3, the Company shall notify the Contracting Authority of the TSIE requirements and instation and TSE modifications and configuration in accordance with the following lead-in time requirements:

- (a) configuration of Instation/software system to accommodate new TSE and TSE that requires to be relocated as part of the New Works - six months;
- (b) delivery of TSIE – twelve months written notice and confirmation 1 month prior to actual delivery requirement;
- (c) notification to the Contracting Authority of any New Works affecting the existing TSE and Traffic Scotland Service – six months;
- (d) the Contracting Authority's attendance to witness work – 21 days;
- (e) notice to uplift TSIE from the Nominated TSIE Store – seven days; and
- (f) configuration of an item of TSIE for the IP communications network – three months from notification regarding configuration requirements.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

3.1.5 The Company shall not undertake any testing in accordance with Section 10 on the Traffic Scotland Service operational installation until the necessary modifications and configuration input have been undertaken and released by the Contracting Authority. This release will not occur until a date not less than four months prior to the additional TSE being required as part of the TSS.

3.1.6 The Contracting Authority will plan, undertake and release the configuration works based on the Company's final design. The Company shall be responsible for the cost of any additional modification, configuration and data input effort by the TSS service providers as a result of changes to the Company's final design.

### **3.2 Transport Scotland Issued Equipment**

3.2.1 The TSS procures various items of TSE through term and call-off contracts with different manufacturers and suppliers. The Contracting Authority will issue to the Company TSE as detailed in APPENDIX A of this Part 3 required to complete the New Works, for installation, testing and commissioning by the Company. This TSE is referred to as TSIE.

3.2.2 APPENDIX A of this Part 3 identifies those large items of TSIE that shall be dispatched direct to the "**Company's Traffic Scotland Equipment Assembly Point**" from Traffic Scotland Service suppliers. All other TSIE shall be uplifted and transported by the Company from the Traffic Scotland Service Nominated TSIE Store to Site or the Company's TSE Assembly Point.

3.2.3 The Traffic Scotland Service Nominated TSIE Store is located on the M80 Motorway between Glasgow and Stirling.

3.2.4 Where the Company disassembles TSIE to ease transportation to Site the Company shall be responsible for reassembly and testing to ensure that the equipment is operational and has not been damaged during disassembly, transportation, reassembly or installation. Any damage incurred shall be treated in the same way as Company's damage to TSE and shall be rectified at the Company's expense.

3.2.5 The Company shall populate and maintain the TSE schedule within Appendix C to manage the planning, ordering, dispatch and installation of TSIE such that the status of each and every item of TSIE can be readily determined by both the Company and the Contracting Authority. The TSIE order and control process and associated records shall be in an electronic format and identify for each item of TSIE the following:

- (a) Traffic Scotland Service TSE equipment number of the TSIE;
- (b) serial number of the TSIE;
- (c) date ordered;
- (d) earliest date for delivery based on the lead in time detailed in Section 3.1.4;
- (e) date uplifted by the Company;
- (f) Nominated TSIE Store equipment release note reference number;
- (g) date delivered to the Company by the supplier, the supplier's name and goods delivered reference number, for TSIE dispatched direct from Traffic Scotland Service supplier;
- (h) date the TSIE was installed on Site;
- (i) Site Acceptance Test ("**SAT**") dates for each TSIE and successful Pre-commissioning SAT certificate reference number; and

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- (j) successful Commissioning SAT certificate reference number.
- 3.2.6 The TSIE process order and control form and associated records shall be version controlled and backed up by the Company.
- 3.2.7 Where activity is taking place that requires the TSIE order and control form to be modified the Company shall issue the modified order and control form to the Contracting Authority on a weekly basis or as instructed by the Contracting Authority.
- 3.2.8 The Company shall ensure that the request for delivery of TSIE matches the Construction Programme. The Company shall comply with the following constraints:
- (a) TSIE supplied directly to the Company shall be subject to a minimum delivery order so that efficient use of the supplier's transport is made. The minimum delivery order shall be 75 percent of the capacity of the Contracting Authority's TSIE delivery vehicle. The Company shall be responsible for the additional transport costs associated with inefficient supplier transport use;
  - (b) the Nominated TSIE Store operates between 08:30 hours and 16:30 hours Monday to Friday excluding statutory holidays. The Company shall provide written notice to the Contracting Authority, in compliance with the lead in times detailed in Section 3.1.4, of the Company's intention to uplift TSIE. The written notice shall include a list of TSIE to be uplifted;
  - (c) TSIE equipment waiting to be installed within a cabinet shall be stored by the Company in an environment that is equivalent to that of its final location. In the case of VMS the Company shall within 4 hours of taking delivery of the VMS connect the equipment to a power source which shall remain in place while the equipment is in storage;
  - (d) the Company shall advise the Contracting Authority of the location and description of the store that the Company shall use, at least 28 days prior to the TSIE being uplifted by the Company from the Nominated TSIE Store. The Company shall also store the equipment supplied directly to the Company in a safe, secure and heated environment to avoid potential damage prior to installation by the Company; and
  - (e) the Company shall complete and submit to the Contracting Authority in compliance with the lead in times detailed in Section 3.1.4 the TSIE Requisition forms for all items of TSIE. A separate form shall be provided for each equipment type ie CCTV form; VMS form etc
- 3.2.9 The Company shall appoint a Transport Scotland Issued Equipment Controller ("TSIE Controller") whose duties shall be to liaise with the Contracting Authority on all matters relating to TSIE.
- 3.2.10 The Contracting Authority shall not accept any request from the Company for the release of TSIE unless it is included with a delivery programme that has been agreed with the Contracting Authority.
- 3.2.11 Written notification shall be provided to the Contracting Authority, in compliance with the lead-in times detailed in Section 3.1.4 by the Company's TSIE Controller, of the planned requirement to release TSIE from the Nominated TSIE Store. The request for TSIE shall be on a just-in-time basis and take cognisance of minimum order requirements to avoid inefficiency of transportation. The Company shall take account of the lead-in time for the delivery of TSIE within the Construction Programme.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- 3.2.12 Faulty or non-operational TSIE, identified during testing in accordance with Section 10, shall be replaced or repaired within 14 days of notification to the Contracting Authority. Subject to the nature of the fault the Contracting Authority may arrange repair of the equipment at the Company's TSE Assembly Point, and the Company shall facilitate access for the Traffic Scotland Service supplier's to undertake repairs to rectify such faulty or non-operational TSIE. Faulty or non-operational TSIE not being repaired at the Company's TSE Assembly Point shall be returned to Traffic Scotland Service Nominated TSIE Stores or shall be uplifted by the provider of the TSIE. Replacement / repaired TSIE shall be subject to testing in accordance with Section 10.

### **3.3 Existing Traffic Scotland Equipment**

- 3.3.1 The Company shall ensure that all the existing TSE affected by the New Works remains operational at all times until such time that the existing TSE requires to be removed to facilitate the permanent New Works. The Company shall take whatever measures are required to protect, divert, reroute or relocate TSE as detailed in Section 3.4 to maintain its operational status unless the Contracting Authority has previously agreed in writing that the TSE downtime can occur. The Company shall, at the request of the Contracting Authority, provide TSS compliant equipment to provide equivalent functionality of the existing TSE while the downtime occurs.
- 3.3.2 The Company shall undertake investigations as necessary to confirm the condition of the existing Active Equipment and Passive Network within the Site or connected to the Site that is required to complete the New Works. The Company shall ascertain as part of these investigations the location and quantity of all existing TSE and associated communications and power networks installed within the Site. The Company shall use all information gained from these investigations in the design of the New Works.
- 3.3.3 With regard to damage to the existing TSE by the Company, the Company shall take cognisance of and provide all assistance necessary to allow Traffic Scotland Service providers to fulfil their obligations in relation to immediate step-in rights to make repairs to TSE and any costs so incurred by the Traffic Scotland Service shall be chargeable to the Company. Any interruption or delay caused to the Company as a result of the application of these step-in rights to make repairs shall lie solely with the Company. The Company shall provide such assistance and resources to the Contracting Authority to facilitate repairs being undertaken.
- 3.3.4 The Contracting Authority shall not apply these step-in rights if the Company provides immediate evidence that repairs to damaged TSE shall be undertaken by the Company within the following timescales:
- (a) to attend at the point of damage within one hour;
  - (b) commence to make repair within thirty minutes of attending the point of damage; and
  - (c) to make a cable serviceable within six hours of attending the point of damage.
- 3.3.5 The Company shall record their attendance and repair times for each and every occurrence of cable damage and shall submit to the Contracting Authority such time records within twenty four hours of the damage occurring. If the repair to TSE is of a temporary nature the permanent repair shall become an obligation on the Company. The permanent repair shall be undertaken within twenty eight days.
- 3.3.6 The Company shall maintain a written record, including marked up drawings which detail all damage to TSE. Such records shall include where, when and what was damaged and detail the temporary and/or permanent repairs which were undertaken. In addition to

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

maintaining such records in accordance with the Specification, the Company shall submit records to the Contracting Authority within 24 hours of completing the permanent repair.

- 3.3.7 Within 3 months from the Effective Date, the Company shall confirm in writing to the Contracting Authority those elements of the existing TSE which are affected by the New Works. The Company shall provide a schedule of the location details and type of existing TSE and the complete course of action that shall be undertaken by the Company to protect, divert, reroute, relocate, provide equivalent functionality equipment, to decommission, reuse, relocate, uplift to store or to dispose of the TSE. The schedule shall be accompanied by a programme and method statements detailing how the Company shall ensure that the TSS shall remain operational during the New Works and how the TSE shall be dealt with. The schedule, programme and method statement shall be submitted to the Contracting Authority to provide at least three months advance notification of any New Works affecting the existing TSE and TSS. Any infrastructure associated with existing TSE that is being decommissioned by the Company shall be removed to a minimum of 300mm below ground level.
- 3.3.8 TSE identified by the Contracting Authority for uplift to the Traffic Scotland Service Nominated TSIE Store shall be arranged and carried out by the Company.
- 3.3.9 Cabling made redundant by the New Works and moved from its original position in the ground shall be removed from Site and disposed of by the Company. Other cabling made redundant and not disturbed can remain in situ provided it does not form a hazard to maintainers, operators or Users. All existing cables made redundant and that remain in situ shall be recorded on as-built drawings and labelled using cable markers in accordance with Clause 1507A (Schedule 2: Part 4) of the Specification.
- 3.3.10 The TSE designated for disposal shall be disposed of in accordance with the EC Waste of Electrical and Electronic Equipment (WEEE) Regulations and the Company's Environmental Management Plan.
- 3.3.11 The Company shall advise the Contracting Authority of all existing TSE to be made redundant as a result of the New Works. The Company shall consult and comply with the requirements of the Contracting Authority in relation to those items of TSE to be removed from the Site and taken to the TSIE Nominated Store.

#### **3.4 Diversion, Re-routing or Relocation of Existing Traffic Scotland Equipment**

- 3.4.1 The Design shall take cognisance of the importance of both existing and new TSE located within the scheme to the wider TSS, and ensure all TSE is operational for the duration of the works.
- 3.4.2 The Company shall divert, re-route or relocate existing TSE to prevent disruption to the TSS or damage to TSE to comply with the requirements of this Part 3 and Clauses 1521A and 1528A of Schedule 2: Part 4.
- 3.4.3 The Company shall ensure that the connectivity with the existing TSE and associated communications and power networks out with the Site are not affected by the New Works and remain operational at all times.
- 3.4.4 Any temporary Passive Network shall include, but shall not be limited to, an armoured multi-pair copper communications cable to BT specification CW1128/1198 with 0.9mm conductors, and armoured optical fibre cable to WOEM 4421 and armoured power cables in accordance with Clause 1506A of Appendix 0/5, where required.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- 3.4.5 The Company shall only interrupt the existing cabling network immediately prior to works commencing in any part of the Site.
- 3.4.6 The Company shall provide and maintain a continuous temporary power supply network for the TSE that is affected by the New Works. The Company shall identify the power supply network associated with the existing TSE and determine the location of diverted, re-routed or relocated equipment, the duration of any Temporary Works and the requirements for continuous operation.
- 3.4.7 The Company shall ensure all Temporary Works for cabling are laid within ducting that is buried underground. The number, depth, routing and protection of the duct, and any Temporary Works for cabling shall be agreed with the Contracting Authority prior to implementing.
- 3.4.8 The Company shall suitably mark with marker tape or other suitable means the temporary cabling works to prevent accidental damage during the New Works.
- 3.4.9 In the design of diversions and the like, the Company shall consider the requirement to maintain the TSE at all times and shall provide all necessary infrastructure to enable safe maintenance of the TSE by organisations employed as part of the Traffic Scotland Service.
- 3.4.10 The Company shall ensure the diversion, re-routing or relocation of TSE is tested and commissioned and shall assist the Traffic Scotland Service providers as necessary to ensure the TSE is operational following such works. Temporary Works for TSE shall terminate within the existing TSE located at the extents of the Site or nearest connection point not affected by the New Works.
- 3.4.11 The Company shall ensure all diversion, re-routing or relocation of TSE is functionally tested prior to and after relocation of TSE in accordance with Section 10 and the Specification.
- 3.4.12 The Company shall ensure all non-operational TSE is covered over where practicable with purpose-made covers marked with 'not in use' or identified with appropriate signage to advise Users that the TSE is not in use. The Company shall remove such 'not in use' covers and signs when the TSE is available for use by Users.
- 3.4.13 The Company shall provide method statements submitted to and approved by the Contracting Authority for any disconnections or reconnection of TSE from or onto the operational TSS. To allow the Contracting Authority the opportunity to witness these works the Company shall provide notice of such disconnections and reconnections in compliance with Section 3.1.4.
- 3.4.14 At the Contracting Authority's discretion the requirement for witnessing work, as described in Section 3.4.13, may be waived.

### **3.5 Connection of New and Existing Traffic Scotland Equipment**

- 3.5.1 Each new item of TSE which connects to the existing TSE shall be subject to testing and commissioning in accordance with Section 10 and the Specification.
- 3.5.2 The Company shall complete the installation and testing of all TSE at the roadside a minimum period of 56 days prior to requesting the Acceptance Certificate. Within this 56 day period the first 42 days shall be for the Company to undertake commissioning of TSE.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

The final 14 day period shall be for the use of the Contracting Authority, supported by the Company as detailed in Section 10, to undertake additional testing and fine tuning.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

## **4 Active Equipment**

### **4.1 General**

- 4.1.1 Active Equipment is segregated into the following communications traffic types:
- (a) Video (from roadside CCTV cameras); and
  - (b) Data (for example to/from Multi-Purpose Controller (MPC), VMS, JT cameras, CCTV controllers, networked computers, etc.)
- 4.1.2 The Active Equipment communications traffic shall be connected to the IP network at transmission stations, Traffic Scotland 600(S) cabinets and at remote equipment sites using Ethernet over the fibre optic cable network. Active Equipment communications traffic shall be capable of being recovered at transmission stations and at the TSNCC.
- 4.1.3 The Active Equipment includes a communications system of switches/routers, connecting devices and transmission equipment.
- 4.1.4 The communications system shall comply with the following requirements:
- (a) A core / distribution network, consisting of Ethernet multi-layer switches connected to provide resilience through redundancy using the longitudinal fibre optic network;
  - (b) A local access network for connecting roadside TSE to the core / distribution network, consisting of Ethernet switches connected to provide resilience through redundancy using the longitudinal and local fibre optic network;
  - (c) Multi-layer switches located in transmission stations shall be connected to other transmission station multi-layer switches and to roadside cabinet switches;
  - (d) Roadside switches shall be connected to adjacent roadside switches or to an adjacent transmission station switch. Switches shall be supplied with all necessary fibre optic interface equipment, and shall require patch leads with Fixed Connectors ("FC"); and
  - (e) Switches shall require local copper Ethernet connection using Category 5e ("CAT5e") cables.
- 4.1.5 Prior to commencing the IP communications infrastructure design the Company shall request from the Contracting Authority confirmation of the IP communication equipment that is available as TSIE and the Contracting Authority will confirm that information within 21 days.
- 4.1.6 The Company shall provide information to the Contracting Authority to allow them to undertake the IP design. This information is termed the IP communications infrastructure design which clearly identifies the location of all the TSE. The Company shall consult and comply with the requirements of the Contracting Authority regarding the IP communications infrastructure design to ensure that the IP communications infrastructure design philosophy will yield a design which will interface with the existing Traffic Scotland Service network. The Company shall submit the IP communications infrastructure design to the Contracting Authority for it to be considered by the TSS providers. The Company shall incorporate IP communications infrastructure comments made by the TSS providers into the IP communications infrastructure design.
- 4.1.7 In finalising the IP communications infrastructure design, the Company shall notify the Contracting Authority of the TSIE to be provided and the configuration requirements that

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

the Company is aware of for each item of TSIE for the IP communications infrastructure network. The timescale for notification shall be in accordance with Section 3.1.4.

- 4.1.8 The Contracting Authority shall provide all pre-configured IP related Active Equipment required to provide the necessary communication path rules, prior to uplift by the Company from TSS Nominated TSIE Store.
- 4.1.9 The Company shall assemble, install, connect, test and commission the Active Equipment complete with internal and, where appropriate, external communications cabling and terminations onto the Passive Network.
- 4.1.10 The Company shall take cognisance of the commissioning requirements for some items of TSE, and the necessity for involvement of TSS providers at some stages of the commissioning process. The Company shall liaise with TSS providers to ascertain the exact requirements and integrate such involvement into their commissioning programme.
- 4.1.11 To prevent potential damage to environmentally sensitive components, Active Equipment shall not be installed on Site unless it can be connected to an electrical power supply (in accordance with Clause 1508A of the Specification) within eight hours of arrival at the location on Site where the Active Equipment is to be installed.
- 4.1.12 The Company shall undertake testing of Active Equipment in accordance with Section 10 and the Specification.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

## **5 Passive Network (Roadside Infrastructure)**

### **5.1 General**

- 5.1.1 Passive Network components to be provided by the Company shall include, but shall not be limited to all infrastructure and supporting infrastructure associated with:
- (a) Verge mounted VMS, CCTV cameras, JT cameras, NDS Sites and WIM facilities;
  - (b) Road restraint systems associated with TSE as detailed in Part 2: Section 1.4;
  - (c) Cabinets and foundations;
  - (d) Longitudinal, transverse and local fibre optic communications cables, cable fittings and terminations;
  - (e) Longitudinal, transverse and local cable routing systems between cabinets and equipment including ducting, draw cords, draw chambers, platforms, cable tray and fixings;
  - (f) Vehicle detection inductive loops and associated feeder cable for NDS Sites and WIM facilities;
  - (g) Incoming power supply and all associated power distribution cabling and infrastructure;
  - (h) Mechanical interface components and brackets to enable the Active Equipment to be fixed, aligned and adjusted during its operational life to the Passive Network;
  - (i) Hard landscaping at, and safe access to, each equipment site or group of equipment sites as detailed in Part 2: section 1.4.

### **5.2 Cabinets and Cable Routing**

#### **5.2.1 Cabinets**

- 5.2.1.1 Other than the specific cabinets provided as TSIE, as detailed in APPENDIX A of this Part 3 all other cabinet types required for the New Works shall be provided by the Company.
- 5.2.1.2 Cabinets and ancillary items required for the ITS works shall be provided in accordance with this Part 3 and Clause 1505A, 1508A and 1512A of the Specification.
- 5.2.1.3 The Company shall provide and install all foundations including 610 plinth and skirts and other fixing arrangements for all cabinets and verge mounted TSE in accordance with the NDX1002-00 series of drawings as listed in Appendix 0/4 of the Specification.
- 5.2.1.4 Cabinet types to be issued as TSIE are:
- (a) Electricity Supplier Termination Pillar (TP) for the incoming local electricity supplier's cable head and outgoing circuits to TSE;
  - (b) Traffic Equipment Distribution Pillar (TEDP) for local power supply termination at each TSE site requiring power, local switchgear and outgoing circuits for each item of TSE; and
  - (c) Combined Electricity Supplier Termination and Traffic Equipment Distribution Pillar (TP/TEDP) for termination of the incoming cable from the Electricity Supply Company and distribution to TSE in accordance with the NDX1011 series of drawings as listed in Appendix 0/4 of the Specification.
- 5.2.1.5 Cabinet types to be supplied by the Company are:
- (a) 600(S) cabinet for housing Active Equipment;

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- (b) Fibre optic cable termination pillar (FOTP), a Highways Agency Type 609 cabinet for termination of fibre optic cable.

- 5.2.1.6 Within three months of completion of the Company's IP Infrastructure design detailed in Section 4.1.5, the Contracting Authority will provide generic details that the Company shall use as the basis of his design for the internal layout of cabinets, including cable terminations, internal cable routing and equipment locations to provide a consistent design used throughout the works. The designs shall incorporate the requirements of drawing B1033200/CD/1510/007, the NDX series drawings and shall be agreed with the Contracting Authority.
- 5.2.1.7 At all TSE sites (CCTV, VMS, JTC, NDS, WIM) the Company shall provide a consistent site layout of TSE and hard landscaped features in accordance with the NDX series drawings. Where a consistent layout cannot be provided, the Company shall consult and comply with the requirements of the Contracting Authority.
- 5.2.1.8 Cabinets shall be placed such that doors open freely and there is sufficient space between and around cabinets for safe working. The Company shall design the site layout of the Passive Network to achieve a consistent approach throughout the Site in compliance with this Part 3, the Specification and Part 2.
- 5.2.1.9 To facilitate future upgrades to the TSS all cabinets shall be sized to accommodate a minimum of 4 unit spare capacity. .
- 5.2.1.10 Unless specifically specified elsewhere in this Part 3, cabinets shall be located so that the maximum cable length to any TSE is 50m.
- 5.2.1.11 The Company shall fit out the cabinet internals, inclusive of interconnecting cables, equipment, termination blocks and the like, and undertake pre-installation testing in accordance with Section 10.3 of this Part 3 in the Company's Traffic Scotland Equipment Assembly Point prior to installation on site.

## **5.2.2 Cable Routing Systems**

- 5.2.2.1 Cable routing for TSE shall be installed in a cable management system as follows:
- (a) on above ground supports for Active Equipment;
  - (b) through concrete substructure supports for VMS; and
  - (c) at every other location in a duct management system as described in Section 5.2.3.
- 5.2.2.2 Cable routing shall comply with the following:
- (a) TSE power and fibre optic cables shall be installed within a duct management system or cable management system to form the cable routing system;
  - (b) The cable routing system, detailed in (a) above, shall be physically separated from other power supply systems with a minimum separation of 500 millimetres throughout the New Works where the voltage of other power systems is up to 415 volts and where the other power supply systems are greater than 415 volts, the minimum separation from the copper communications cables shall be a minimum of 2 metres. Where local conditions dictate, the longitudinal ducts may be placed closer for a maximum of 50 metres, but this shall be minimised as far as practicable, and each occurrence shall only be allowed with the prior written agreement of the Contracting Authority.
  - (c) If routes are enclosed, whether utilised or not, they shall be provided with continuous draw cords secured between the chambers;

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

- (d) Cable routing systems shall be installed so as to run parallel to the relevant adjacent road;
- (e) Transverse cable routing shall be perpendicular to the relevant road; and
- (f) Cable routing systems shall be continuous in one verge of the carriageway along the full length of the New Works.

5.2.2.3 The Company shall ensure the continuity of the cable routing systems at their interface with Structures are not compromised during the construction of roads and Structures, for example at bridge foundations. The Company shall ensure:

- (a) Correct alignment of the cable routing systems within the Structure foundation;
- (b) Installation of required draw cords within the cable routing systems within the Structure and its associated chambers;
- (c) Provision of smooth cable routing systems with an appropriate bending radius to avoid damage to cables within the Structure foundation;
- (d) Continuity of cable routing systems through Structure components such as abutments, expansion joints and interfaces; and
- (e) Provision of leak proof joints such that spoil (e.g. from resin, grouting, mortar, silt and the like) shall not migrate into the duct to create any blockage (permanent or otherwise) of the duct route.

5.2.2.4 Cable restraint and support systems shall be provided for above ground cable management systems in accordance with Clause 1507. Where cable management systems span mechanical or expansion joints the cable management system and cables shall be designed and installed to prevent additional strain to the cable restraint mechanism or damage to the integrity of the cable.

5.2.2.5 At all VMS foundations the cable routing system shall be cast in the concrete foundation in accordance with Section 5.2.2.3. Above ground cable management systems shall not be permitted.

### **5.2.3 Ducting and Chambers for Roads**

5.2.3.1 The Company shall provide underground ducting and chambers for TSE cable networks in accordance with the New Works Requirements, the NDX1063 series of drawings, as listed in Part 4: Appendix 0/4, and Clause 1530A of the Specification to provide an integrated duct network.

5.2.3.2 The Company shall provide, install and test the ducts, duct network and duct chambers for TSE in accordance with Clauses 1507A, 1530A, 1531A, 1532A and 1533A of Schedule 2: Part 4 and additionally the requirements of this Part 3.

5.2.3.3 Type A, B, C and D chambers are specified in Clause 1532A of the Specification.

5.2.3.4 The Company shall provide all necessary ducts, chambers and draw cords to complete the works which link TSE on all relevant roads and in accordance with the following minimum criteria:

- (a) Four, 100 millimetre internal diameter, longitudinal communication ducts within one verge throughout the site and slip road verges. Where TSE is located in the opposite verge from the longitudinal communication ducts, four, 100 millimetre internal diameter, transverse communication ducts shall be provided to cross the carriageway to the TSE in the opposite verge.;
- (b) Where the longitudinal communication ducts cross a Slip Road four, 100 millimetre internal diameter, transverse communication ducts shall be provided;

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- (c) Two, 150 millimetre internal diameter power ducts to distribute power supply cables between the TSE and the incoming power supply point;
- (d) Four 100 millimetre, internal diameter, transverse communication ducts, and two 150 millimetre, internal diameter, transverse power supply ducts, shall be provided as required at a maximum spacing of 1500m to cross the carriageway on all new Trunk Roads.;
- (e) Ducts shall not be installed where existing trees, shrubs and the like may have an impact on the future integrity of the ducting;
- (f) Type A chambers in both verges at each transverse duct location, and at each TSE site;
- (g) Type C chambers at each 600(S);
- (h) Additional intermediate Type A chambers between transverse ducts at a maximum distance of 250 metres;
- (i) Additional Type A chambers at locations where any changes of direction, road crossings or level changes of the duct installation occur including entry to and egress from any Structures;
- (j) Type D loop detector chambers at each NDS site where sub-surface loops are installed and jointed to loop feeder cables;
- (k) Additional chambers and local 100 millimetre diameter ducts at each TSE site to interconnect all TSE chambers and ducts to provide a cable route between all TSE at each site; and
- (l) Chambers shall not be installed on the slope of embankments unless an appropriate level area of hard landscaping is provided for cable installation and future maintenance.

5.2.3.5 Two of the ducts provided under Section 5.2.3.4 (a), (b) and (d) shall be used by the Company whilst the other two ducts shall be kept available for use by Transport Scotland as a continuous and empty route throughout the Site in accordance with the Specification.

5.2.3.6 The Company shall provide marker tape for the cable routing systems in accordance with Clause 1511A of the Specification.

5.2.3.7 Where existing ducting is to be used the Company shall assess the suitability, availability and serviceability of such ducting to be included within the New Works. The Company shall undertake suitable testing to demonstrate to the Contracting Authority that the duct is acceptable for reuse.

5.2.3.8 The ducting and chambers shall provide an integrated network of routes that efficiently inter-connect TSE.

#### **5.2.4 Transmission Stations**

5.2.4.1 The communication link between the TSNCC and the local communication network detailed in Section 5.2.5 shall be facilitated by two third party communication links that are compatible with the Traffic Scotland Service network. These links shall connect to the local communication network through the provision of two transmission stations, which shall be located within the LMA and close to the cable infrastructure of the third party communication link provider to form a resilient network. The location of the transmission stations and route of the links shall form part of the Company's New Works design.

5.2.4.2 The Company shall provide the links and all associated equipment and ascertain the third party communication link provider's requirements for their equipment environmental

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

conditions; maintenance requirements; power, including power back-up and security and incorporate these requirements in to the design.

5.2.4.3 The Contracting Authority will provide pre-fabricated transmission station enclosure buildings , complete with heating and ventilation/ air conditioning; lighting and internal power; lockable door; intruder alarm; server racks; power termination and cable termination. The design of the enclosure building will be undertaken by the Contracting Authority based on the Company's New Works design. The enclosure will have a minimum plan area of 4.0m x 2.5m. The Company shall:

- (a) liaise with the Contracting Authority regarding the final design of the enclosure building;
- (b) provide the enclosure building foundations, fixing arrangements, hard landscaping, cable routing and landscaping;
- (c) provide site access to the Contracting Authority specialist contractor to deliver, fix in place and waterproof the enclosure building;
- (d) provide, connect, test and certify permanent power supply to the building within 12 hours of the enclosure building being fixed into position; and
- (e) install and terminate the third party links and associated equipment within the enclosure building.

5.2.4.4 The Company shall consult and comply with the requirements of the Contracting Authority on the location and design of the transmission stations. The Company shall allow six months lead in time for the procurement of the enclosure building by the Contracting Authority, following completion of the design detailed in section 5.2.4.3 (a).

### **5.2.5 Cable Network and Connections**

5.2.5.1 The cable network and connections shall form a communications system that collects, distributes and controls the movement of all data and video between the TSNCC and each item of TSE within and outwith the Site. The cable network and connections form part of the Passive Network while the switches and routing devices are part of the Active Network. The communications system radiates from transmission stations generally located at strategic junctions on the road network.

5.2.5.2 The Company shall comply with the requirements in this Part 3 and Clauses 1506 and 1507A of the Specification with regard to the provision, use and installation of fibre optic, multi-pair communications and loop feeder cables within the New Works Site and communications circuits connected through the Site.

5.2.5.3 The Company shall comply with the requirements in this Part 3 and Clauses 1507A, 1513A and 1514A of the Specification with regard to the termination, jointing and connection of multi-pair communications and loop feeder cables within and connected to the Site.

5.2.5.4 The Company shall comply with the requirements in this Part 3 and Clauses 1507A, and 1515A of the Specification with regard to the termination, jointing and connection of fibre optic cables within the Site and communications circuits connected through the Site.

5.2.5.5 The Company shall comply with the requirements in this Part 3 and Clauses 1507A, and 1516A of Schedule 2: Part 4 with regard to the termination, jointing and connection of power cables within the Site and communications circuits connected through the Site.

5.2.5.6 The cable types to be supplied, installed, tested and commissioned by the Company for use in cable routing systems in this Contract shall be:

- (a) armoured 24 fibre single mode to Transport Wales Specification WOEM 4421;

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- (b) armoured feeder cable for inductive loop detectors to Highways Agency Technical Requirement Specification TR 2031;
- (c) inductive loop detector cable to specification Highways Agency Technical Requirement Specification TR 2029;
- (d) armoured power cable, three core XLPE/SWA/PVC to BS 5467; and
- (e) all specialist TSE cable types as necessary to satisfy these New Works Requirements in relation to the installation of TSE.

5.2.5.7 Not Used

5.2.5.8 The Company shall consult and comply with the requirements of the Contracting Authority to connect / disconnect cables, transmission paths or lasers.

5.2.5.9 Communications cables shall not be installed in longitudinal or transverse power ducts.

5.2.5.10 Not Used.

5.2.5.11 The Company shall provide a single cable network comprising of up to 24 cores of fibre cable as follows:

- (a) in one verge of the carriageway of the AWPR/B-T from Stonehaven Junction to Tippetty Junction;
- (b) in one verge of the carriageway of the AWPR/B-T from Cleanhill Junction to Charleston Junction;
- (c) in one verge of the carriageway of existing routes to connect TSE; and
- (d) in transverse carriageway crossings to connect TSE.

5.2.5.12 At joint locations where the fibre optic cable does not require termination, the joint shall be a fusion splice type.

5.2.5.13 The Company shall provide up to 24 fibre optic spur cables between a Fibre Optic Termination Pillar (FOTP) and a remote location where a fibre connection is required.

5.2.5.14 The third party communication links between the transmission stations and the TSNCC to be provided by the Company shall:

- (a) be compatible with the Traffic Scotland Service network;
- (b) be resilient from each other and from the network being installed within the project, such that the failure of one link will not impact upon the other link;
- (c) connect to the TSNCC via two separate core switch locations to be identified by the Company through consultation with the Contracting Authority;
- (d) have a minimum capacity of 1GB each link; and
- (e) be tested, and commissioned by the Company in accordance with Section 10 and handed over to the Contracting Authority who shall make all arrangements for the ongoing lease of the links. The Company shall consult and comply with the requirements of the Contracting Authority on the details required by the third party supplier for the ongoing lease of the links.

5.2.5.15 The Company shall, as a minimum, install in the verge of the cable network as detailed in 5.2.5.11, fibre optic cables supplying up to 24 fibre cores, through the duct network to form a longitudinal optical fibre network to support local connection to TSE in each verge. The fibre optic cable shall be terminated at a maximum interval of 1500 metres in FOTPs located in the verge coincident with other TSE. This distance may be extended with the written approval of the Contracting Authority.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- 5.2.5.16 The Company shall provide as required, multi-pair copper (and any other specialist required cables) cabling from the 600(S) to individual items of TSE.
- 5.2.5.17 Not Used.
- 5.2.5.18 All fibre optic and copper terminations shall be above ground and within termination cabinets. Underground joints shall not be permitted except within loop chambers for connection of loop cables to loop feeder.
- 5.2.5.19 The Company shall liaise with the Contracting Authority to obtain up to date fibre optic cable allocations for both used and unused pairs and fibres. A minimum of eight fibres shall remain unused and as a continuous path, from end to end. All spare fibres shall be spliced to form a continuous circuit between transmission stations.

### **5.3 Power Supply Network and Connections**

- 5.3.1 The Company will provide an independent 230 volts single phase electrical supply from the Electricity Supply Company to all new sites as detailed within the Design. The power supply provided will be located on the trunk road network boundary fence line, to be terminated in a TP that will not exceed a distance of 100 metres from the TP to the TSE Site. The Company shall specify and order the TP from the Contracting Authority, and install it in the final location on the trunk road network boundary fence line in advance of the Electricity Supply Company installing the power cable.
- 5.3.2 The Company shall provide the power distribution network from the TP to the TSE site.
- 5.3.3 The Company shall monitor the Electricity Supply Company progress and work with and support them in the delivery of all required power supplies from the Effective Date.
- 5.3.4 The Company shall where necessary, provide, purchase and upgrade existing power supplies required for the completion of the New Works. Any diversions of existing power supplies required shall be the responsibility of the Company.
- 5.3.5 At all TSE sites that require an electricity supply the Company shall provide a point of electrical isolation physically separated from the TSE cabinet but not more than 20 metres distance from the cabinet. ,
- 5.3.6 With specific written approval from the Contracting Authority and based on a justification report by the Company the longitudinal distribution of private power supply network may be increased to a maximum of 250 metres from the Electricity Supply Company's cable head to the furthest item of connected TSE.
- 5.3.7 Provision of power supplies and associated cabinetry shall be in accordance with NDS 9551 and NDS 9565.
- 5.3.8 The Contracting Authority shall supply the power supply cabinets, complete with the associated internal fittings and switchgear, as detailed in APPENDIX A of this Part 3. The Company shall submit to the Contracting Authority the required ratings of the internal switchgear and protective devices necessary to ensure the New Works are compliant with BS 7671: Requirements for Electrical Installations. For each power supply the Company shall prepare circuit designs and calculations and complete an Order Package Configuration Sheet, in accordance with NDS 9565. This shall be submitted to the Contracting Authority at least three months prior to the Company's request to release any TSIE in accordance with Section 3.2.8;
- 5.3.9 All TSE shall be earthed and bonded in accordance with Clause 1517A of the Specification.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

- 5.3.10 The earth fault disconnection time of all circuits supplying TSE shall be a maximum of 0.4 seconds.
- 5.3.11 The Company shall ensure the incoming Electricity Supply Company's cable is terminated in a TP or TP/TEDP for isolation and distribution of outgoing circuits to TSE as specified in Clause 1508A of the Specification and the NDX 1011 series of drawings, as listed in Appendix 0/4 of the Specification. The TP shall be located so that the Electricity Supply Company staff can access the equipment safely without requiring access to the trunk road network or supervision from the trunk road maintenance organisation.
- 5.3.12 The Company shall provide the design, cabling, testing and completion certificates associated with the new, upgraded or amended power supply network and its distribution to the TSE in accordance with BS 7671: Requirements for Electrical Installations.
- 5.3.13 Power cables shall not be installed in the longitudinal or transverse communication ducts.
- 5.3.14 The Company may utilise any existing power supply network to TSE within and adjacent to the Site where compliance with BS 7671 and the Electricity at Work Regulation 1989 can be achieved. The Company shall upgrade the existing power supply network and associated supply / distribution cabinets as required to make such existing power supply networks equivalent to the standard detailed in this Section 5.
- 5.3.15 Notwithstanding the requirements of Section 5.3.1, for remote standalone TSE sites the Company shall consider sustainable sources of power as an alternative to electricity supplied from the Electricity Supply Company. The Company shall consult and comply with the requirements of the Contracting Authority with regard to alternative power provision to TSE.
- 5.3.16 The Company shall ensure that the power distribution network can accommodate the power consumption requirements for the TSIE as detailed in Table 1 and the requirements of Sections 5.3.18 and 5.3.19. An additional allowance of twenty five per cent of the total power supply to each TSE site shall be provided for future upgrades to the TSS.

**Table 1 TSE Power Loading**

| <b>Equipment</b>                                        | <b>Design Value<br/>(Watts)</b> |
|---------------------------------------------------------|---------------------------------|
| CCTV Camera (Heater on and PTZ running)                 | 460W                            |
| TMU                                                     | 5W                              |
| MPC4                                                    | 70W                             |
| JT Camera                                               | 30W                             |
| Ethernet Switch                                         | 40W                             |
| DSL Modem                                               | 20W                             |
| 600(S) cabinet (with test socket allowance)             | 880W                            |
| Roadside Controller (" <b>RSC</b> ")                    | 25W                             |
| Offset T MS4VMS (Full display with all Heaters/Fans On) | 4000W                           |
| 6x23 MS4VMS (Full display with all Heaters/Fans On)     | 6000W                           |
| UPS (for network equipment)                             | 800W                            |

- 5.3.17 The Company shall provide all necessary alteration and / or modification of existing electrical circuits to complete the New Works.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

- 5.3.18 The Company shall provide two spare 6 amp circuits available at TEDP cabinets, and 600(S) cabinets.
- 5.3.19 The Company shall provide a single socket outlet for connection of portable apparatus to facilitate testing and maintenance within each 600(S) cabinet.
- 5.3.20 In the event that any new, upgraded or amended circuit fails an inspection or test, the Company shall carry out works necessary to achieve the requirements of BS 7671: Requirements for Electrical Installations. The Company shall operate under a 'Permit to Work' system when implementing any such changes to circuits.
- 5.3.21 Not Used.
- 5.3.22 The Company shall ensure provision of the power supply before installation of any Active Equipment in accordance with Clause 1508 of the Specification. The Company shall ensure this supply will continuously power the Active Equipment from the time of installation. The Company shall ensure that power supplies are made permanent before commencement of any site based testing or commissioning as described in Section 10, unless otherwise agreed in writing with the Contracting Authority. The Company shall ensure that any temporary power supplies provided are suitable for use with sensitive electronic equipment and provide continuous operation of the TSS at all times. The Company shall monitor and record the performance of the power supply, immediately rectifying any failures and shall record the Company's attendance and repair times for each and every occurrence of power failure, submitting to the Contracting Authority such time records of power failure within twenty four hours of the failure occurring.

#### **5.4 Hard Landscaping**

- 5.4.1 The Company shall provide hard landscaping for all TSE sites with Active Equipment including vehicle, pedestrian and maintenance access as detailed in Schedule 2: Part 2 and Clause 1539A of the Specification so that maintenance access can be facilitated without the need for temporary traffic management. Where practicable the Company shall provide maintenance access from side roads for TSE sites.

#### **5.5 Location and Installation of Traffic Scotland Equipment**

- 5.5.1 Not used

##### **5.5.2 Closed Circuit Television Facilities**

- 5.5.2.1 The Contracting Authority shall supply the CCTV equipment detailed in APPENDIX A of this Part 3 as TSIE for installation by the Company.
- 5.5.2.2 The Company shall install CCTV facilities and equipment in accordance with this Part 3 and Clause 1534 of the Specification to provide total coverage of the Trunk Roads at Junctions to the TSNCC from cameras mounted a maximum of 15m above carriageway level. The required level of coverage shall be achieved through the use of Pan, Tilt and Zoom (PTZ) functionality and shall be sufficient to allow the TSNCC operators to view traffic flow conditions and incidents. The CCTV design shall assume the maximum viewing distance of cameras is 500m.
- 5.5.2.3 The Company shall provide CCTV facilities as detailed in Table 2. .

Part 3: Specific Requirements  
Traffic Scotland Equipment

**Table 2 CCTV Provision**

| <b>CCTV Facilities</b>                        |                                          |
|-----------------------------------------------|------------------------------------------|
| <b>Junction</b>                               | <b>Minimum Quantity at this Location</b> |
| Stonehaven Junction                           | CCTV 1                                   |
|                                               | CCTV 2                                   |
| Charleston Junction                           | CCTV 3                                   |
|                                               | CCTV 4                                   |
|                                               | CCTV 5                                   |
| Cleanhill Junction                            | CCTV 6                                   |
| Milltimber Junction                           | CCTV 7                                   |
|                                               | CCTV 8                                   |
| South Kingswells Junction                     | CCTV 9                                   |
|                                               | CCTV 10                                  |
| North Kingswells Junction                     | CCTV 11                                  |
| Craibstone Junction                           | CCTV 12                                  |
|                                               | CCTV 13                                  |
|                                               | CCTV 14                                  |
| Goval Junction                                | CCTV 15                                  |
|                                               | CCTV 16                                  |
| Blackdog Junction                             | CCTV 17                                  |
|                                               | CCTV 18                                  |
| Balmedie Junction                             | CCTV 19                                  |
|                                               | CCTV 20                                  |
| Newburgh Road Junction                        | CCTV 21                                  |
|                                               | CCTV 22                                  |
| Tipperty Junction                             | CCTV 23                                  |
|                                               | CCTV 24                                  |
| <b>Total Minimum Quantity of CCTV Cameras</b> | <b>24 No.</b>                            |

- 5.5.2.4 All CCTV equipment shall be of PTZ configuration.
- 5.5.2.5 The Company shall undertake a visibility survey of the CCTV coverage provided by the facilities detailed in Table 2. Should the survey demonstrate that the requirements of Section 5.5.2.2 are not achieved the Company shall consult and comply with the Contracting Authority with regard to satisfying the requirements.
- 5.5.2.6 The Company shall submit to the Contracting Authority evidence to confirm that the requirements of Section 5.5.2.2 can be achieved and also the extent of the coverage from each camera prior to undertaking any CCTV works.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

5.5.2.7 The Company shall submit to the Contracting Authority not less than three months from the date of requirement of CCTV equipment the length of prefabricated composite interconnecting cables required to allow connection between the CCTV and the TSE cabinet.

5.5.2.8 Not Used

5.5.2.9 For CCTV cameras located at standalone sites, the Company shall:

- (a) provide the camera mast that incorporates an electrically operated lowering head and allows the camera to be locked in its operating position. The mast shall be an equal equivalent to the masts used extensively in the TSS and allows a steady, stable image to be captured, without sway of the camera;
- (b) provide the mast foundation, hard standing and TSE cabinets and associated interconnecting ducts;
- (c) provide safe access and defined working area to allow attendance at the site by operatives;
- (d) install the camera mast on the foundation;
- (e) provide a 6A capable 110V electrical outlet within 10m of the base of the CCTV mast to facilitate the maintenance operatives electrical means of lowering and raising the CCTV camera;
- (f) install the camera and PTZ unit on the top of the mast;
- (g) provide the power, communications and fibre cables from the standalone CCTV site to the power distribution and longitudinal communications cables;
- (h) install the prefabricated composite interconnecting cables between the CCTV camera housing on the mast and the base station unit within the TSE cabinet; and
- (i) test and commission the installation to prove the complete CCTV installation in accordance with Section 10.

5.5.2.10 Typical layout and connection details for a CCTV site are shown on drawing B1033200/CD/1510/001.

5.5.3 Not used

#### **5.5.4 National Traffic Data Service Vehicle Detection Facilities**

5.5.4.1 The Contracting Authority shall supply the NDS equipment detailed in APPENDIX A of this Part 3, for installation by the Company.

5.5.4.2 The Company shall install the Data Service equipment within the links detailed in Table 3a. At these locations loop arrays shall be installed in each lane of both carriageways and ideally located at the approximate mid-point of a link where free flowing traffic flows are anticipated.

**Table 3a National Traffic Data Service – Mainline**

| <b>Ref.</b> | <b>Link</b>                         |
|-------------|-------------------------------------|
| NDS 1       | Cleanhill - Milltimber              |
| NDS 2       | Milltimber – South Kingswells       |
| NDS 3       | South Kingswells – North Kingswells |
| NDS 4       | North Kingswells to Craibstone      |

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

| Ref.                                              | Link                        |
|---------------------------------------------------|-----------------------------|
| NDS 5                                             | Craibstone to Goval         |
| NDS 6                                             | Goval to Blackdog           |
| NDS 7                                             | Cleanhill to Charleston     |
| NDS 8                                             | Blackdog - Balmedie         |
| NDS 9                                             | Newburgh Road - Tipperty    |
| NDS10                                             | Tipperty – Ellon Roundabout |
| <b>Total Quantity of NDS Mainline Sites 10No.</b> |                             |

5.5.4.3 The Company shall install NDS equipment to allow monitoring of all traffic entering and leaving the trunk road network. Loop arrays shall be located within all lanes of the slip roads at the junctions identified in Table 3b.

**Table 3b National Traffic Data Service – Slips**

| National Traffic Data Service - Slips    |                 |                                      |
|------------------------------------------|-----------------|--------------------------------------|
| Ref.                                     | Junction        | Minimum Slip Road loops              |
| NDS 11                                   | Stonehaven      | 4x Slip Roads                        |
| NDS 12                                   | Milltimber      | 4x Slip Roads                        |
| NDS 13                                   | South Kingswell | 4x Slip Roads                        |
| NDS 14                                   | Craibstone      | 4x Slip Road<br>5x on A96 Roundabout |
| NDS 15                                   | Goval           | 4x Slip Roads                        |
| NDS 16                                   | Blackdog        | 4x Slip Roads                        |
| NDS 17                                   | Charleston      | 4x Slip Roads                        |
| NDS 18                                   | Balmedie        | 4x Slip Roads                        |
| <b>Total Quantity of NDS Slips Sites</b> |                 | <b>8 No.</b>                         |

5.5.4.4 At NDS sites the Company shall ensure that the loop cable from the TSE cabinet along the verge to the Type D chamber for the vehicle inductive loops is no greater than 200 metres.

5.5.4.5 The Company shall allow witnessing of works associated with the NDS sites by the Contracting Authority in accordance with the timescales set out in section 3.1.4 to comply with this requirement.

5.5.4.6 The Contracting Authority will provide the initial configuration of the TMUs. The Company shall carry out the calibration and any further adjustments of each site during peak and off peak traffic flow conditions to determine the necessary adjustments to the initial configurations. This shall be achieved through testing and fine tuning of the equipment at the following intervals:

- (a) during initial commissioning prior to operational handover and road opening to Users;
- (b) between 14 and 28 days following the opening of the road to Users; and
- (c) between 112 and 140 days following the opening of the road to Users.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

5.5.4.7 Not Used

5.5.4.8 Not Used.

5.5.4.9 The Company shall provide NDS equipment in accordance with the requirements of this Part 3 and Clauses 1537A, 1536A, and 1549A of the Specification.

5.5.4.10 For each Data Service site the Company shall:

- (a) provide the vehicle inductive loops in accordance with MCH1540 with the exception that the loops shall be installed below the surface course prior to laying of the surface course on newly constructed or resurfaced roads (i.e. saw cutting of the surface course shall not be permitted);
- (b) install and terminate loop cables into the TSE cabinet;
- (c) install the TMU and associated interconnection cables in the TSE cabinet; and
- (d) test and commission the installation to prove the complete Data Service installation in accordance with Section 10.

5.5.4.11 Typical layout and connection details for an NDS site are shown on drawing B1033200/CD/1510/002

**5.5.5 Weigh-in-Motion**

5.5.5.1 The Contracting Authority shall supply the Weigh-in-Motion equipment detailed in Appendix A for installation by the Company.

5.5.5.2 The Company shall install WIM facilities and equipment in accordance with the requirements of this Part 3, drawing number NDX1097-01 and the Specification Clause 1549A.

5.5.5.3 The Company shall install WIM sites at the locations detailed in Table 4.

**Table 4 – Weigh in Motion Locations**

| Ref.                                   | Link                              |
|----------------------------------------|-----------------------------------|
| WIM 1                                  | Stonehaven - Cleanhill            |
| WIM 2                                  | Balmedie – Newburgh Road Junction |
| <b>Total Quantity of WIM Sites 2No</b> |                                   |

5.5.5.4 For each new WIM site the Company shall:

- (a) provide the vehicle inductive loops in accordance with MCH1540 in each carriageway with the exception that the loops shall be installed below the surface course prior to laying of the surface course on newly constructed or resurfaced roads (i.e. saw cutting of the surface course shall not be permitted); ;
- (b) install the piezo electric sensors in each carriageway;
- (c) install and terminate loop cables and screened sensor cables directly into the TSE cabinet;
- (d) provide power to the TSE;
- (e) install the WIM control unit and associated communications equipment and interconnection cables in the TSE cabinet; and
- (f) test and commission the installation to prove the complete WIM facility installation in accordance with Section 10, including calibration of the sensors using Heavy Goods Vehicles of a known weight as provided by Transport Scotland.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

5.5.5.5 The specialist screened sensor cable is supplied in 50m or 75m lengths as TSIE. The Company shall advise the Contracting Authority of the length of specialist screened sensor cable required for the installation not less than three months from the date that the cables are required.

5.5.5.6 Typical layout and connection details for a WIM site are shown on drawing B1033200/CD/1510/003

### 5.5.6 Variable Message Sign Facilities

5.5.6.1 The Contracting Authority shall supply the Cantilever VMS and Offset-T VMS complete with support structures and Ambient Light Monitoring (ALM) equipment detailed in Appendix A of this Part 3, for installation by the Company.

5.5.6.2 The Company shall install VMS facilities and equipment in accordance with the requirements of this Part 3 and Clause 1535A of the Specification. The Company shall consult and comply with the requirements of the Contracting Authority over works planning; staff competencies; method of work; lifting plans and hold and witness points.

5.5.6.3 The Company shall install VMS in accordance with the following criteria:

- (a) at the locations and with the sign type detailed in Table 5;
- (b) normally 1 mile in advance of the network route decision points (e.g. junctions/ auxiliary lanes) although the final location shall take cognisance of land availability, other infrastructure constraints and environmental impacts;
- (c) integrated with the Traffic Signs and Road Marking Design to convey a clear and concise messaging/ signing strategy to Users; and
- (d) each VMS shall be visible to any User 300 metres or more upstream of the VMS, and shall not be obscured by other road infrastructure, trees or shrubs.

**Table 5 – Variable Message Sign Facilities**

| Variable Message Sign Facilities |            |                                                                                                     |
|----------------------------------|------------|-----------------------------------------------------------------------------------------------------|
| Ref.                             | Sign Type  | Location                                                                                            |
| VMS 1                            | Cantilever | A90 - Northbound Approach to Stonehaven Junction.<br>(Decision Point Northbound – Fastlink / A90).  |
| VMS 2                            | Cantilever | A90 - Northbound Approach to Charleston Junction.<br>(Network Information – Southern Leg / A90)     |
| VMS 3                            | Cantilever | Northbound Approach to Cleanhill Junction<br>(Decision Point North / East – Southern Leg)           |
| VMS 4                            | Cantilever | Southbound Approach to Cleanhill Junction<br>(Decision Point South / East – Southern Leg)           |
| VMS 5                            | Cantilever | Northbound Approach to Craibstone Junction<br>(Decision Point North / East – A96 / Northern Leg)    |
| VMS 6                            | Cantilever | A96 Eastbound Approach to Craibstone Junction<br>(Decision Point North / East – A96 / Northern Leg) |
| VMS 7                            | Cantilever | A90 - Southbound Approach to Blackdog Junction<br>(Decision Point Southbound – Northern Leg / A90). |
| VMS 8                            | Offset-T   | A96 - Westbound to Craibstone Junction                                                              |

| VMS 11                                  | Offset-T         | A90 – Northbound Approach to Newburgh Road junction -<br>Stoneyards (Decision Point)      |
| <b>Total Quantity of VMS</b>            |                  | <b>11 No.</b>                                                                             |

5.5.6.4 Not Used

5.5.6.5 Not Used

5.5.6.6 For each VMS facility the Company shall:

- (a) install the VMS sign on the TSIE provided support frame and post;
- (b) provide access, and associated brackets, fixings and cable management systems;
- (c) provide appropriate fixing arrangements between the foundation and structure , and between the structure and the TSIE;
- (d) provide, install and terminate interconnecting power and communication cables between the VMS and the TSE cabinet as necessary;
- (e) ensure that the VMS is aligned for optimum visibility by Users; and
- (f) test and commission the installation to prove the complete VMS installation in accordance with Section 10.

5.5.6.7 The existing northbound cantilever VMS on the A90 at Pitmillan is to be removed in accordance with Section 3.3.

5.5.6.8 Typical layout and connection details for a VMS site are shown on drawing B1033200/CD/1510/004.

5.5.7 Not Used

5.5.8 Not Used

**5.5.9 Journey Time Facilities**

5.5.9.1 The Contracting Authority shall supply the JT equipment detailed in APPENDIX A of this Part 3, for installation by the Company.

5.5.9.2 The Company shall take cognisance of the two types of JT equipment, Type A and Type B. The Company shall install JT facilities and equipment in accordance with the requirements of this Part 3 and the Specification.

5.5.9.3 JT facilities Type A shall be provided by the Company at each major network node/ junction to allow the journey time to be measured on each link as detailed in Table 6. JT facilities Type A shall be pole mounted and located in pairs in the verge of each carriageway.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

**Table 6a – Journey Time Facilities Type A**

| <b>Journey Time Facilities Type A</b>    |                         |                                         |
|------------------------------------------|-------------------------|-----------------------------------------|
| <b>Ref.</b>                              | <b>Link</b>             | <b>Location</b>                         |
| JT 1                                     | Stonehaven - Cleanhill  | North of Stonehaven Junction            |
| JT 2                                     | Stonehaven - Cleanhill  | South of Cleanhill Junction             |
| JT 3                                     | Cleanhill - Craibstone  | South of Craibstone Junction            |
| JT 4                                     | Craibstone to Blackdog  | South of Blackdog Junction              |
| JT 5                                     | Cleanhill to Charleston | West of Charleston Junction             |
| JT 6                                     | Blackdog to Tipperty    | South of Tipperty Junction (Stoneyards) |
| <b>Total Quantity of Type A JT Sites</b> |                         | <b>6 No.</b>                            |

5.5.9.4 The mounting arrangement for Type A JT facility shall be adjustable in the horizontal and vertical planes so as to allow the JT cameras to be focused on the centre of the lane(s) to be monitored. The mounting pole shall be capable of being lowered to allow maintenance access to the cameras.

5.5.9.5 Not Used.

5.5.9.6 Not Used

5.5.9.7 For each Type A JT equipment site, the Company shall:

- (a) submit to the Contracting Authority not less than three months from the date of requirement of JT equipment the lengths of JT interconnecting power and communication cables required to allow connection between the pole mounted JT equipment and the TSE cabinet;
- (b) install and terminate interconnecting power and communication cables between the TSIE and the TSE cabinet;
- (c) install the TSIE and associated interconnection cables; and
- (d) align the cameras, test and commission the installation to prove the complete JT type A installation in accordance with Section 10.

5.5.9.8 JT type B equipment shall be installed above the centreline of each lane on both carriageways at the locations detailed in Table 6b

**Table 6b – Journey Time Facilities Type B**

| <b>Journey Time Facilities Type B</b> |                                             |                                                                                                                 |

| JT 7                                  | Southern Leg                                | PS31 Hatton Overbridge                                                                                          |
| JT 8                                  | Milltimber Junction                         | PS18 Milltimber Junction Overbridge                                                                             |
| JT 9                                  | Goval Junction                              | PS53 A947 Overbridge                                                                                            |
| JT 10                                 | Blackdog Junction to Tipperty Junction Link | Overbridge to be determined through consultation with Traffic Scotland facilitated by the Contracting Authority |

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

| <b>Journey Time Facilities Type B</b> |                                           |                 |
|---------------------------------------|-------------------------------------------|-----------------|
| <b>Ref.</b>                           | <b>Location</b>                           | <b>Comments</b> |
|                                       | <b>Total Quantity of Type B JTC Sites</b> | <b>4 No.</b>    |

5.5.9.9 The incoming data connection of the JT Type B equipment at the Type 600(S) cabinet will be provided by others

5.5.9.10 For each JT Type B equipment site, the Company shall:

- (a) provide upstream facing mounting brackets for a camera and infrared illumination above each lane;
- (b) provide the Type 600(S) cabinet and power distribution cabinet;
- (c) provide cable routing system between the roadside Type 600(S) and the mounting brackets and cameras; and
- (d) test and commission the power installation.

5.5.9.11 Typical layout and connection details for a Type A and Type B JT site are shown on drawing B1033200/CD/1510/005

## **5.6 Equipment Numbering**

5.6.1 The Company shall utilise the TSE numbering when detailing TSE on drawings and documents. The TSE numbering is based on the TSS route chainages and is detailed on drawing B1033200/CD/1510/008.

5.6.2 The Company shall provide numbering for all TSE in accordance with Clause 1519 of the Specification.

## **5.7 Spares**

5.7.1 The Company shall hold in their maintenance stores items of the Passive Network as spare parts as detailed in APPENDIX B of this Part 3.

5.7.2 Stores items shall be replenished within 28 days from when they were removed from the Company's stores.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

## **6 Traffic Signs and Road Markings**

### **6.1 General**

- 6.1.1 The Company shall integrate the VMS design with the traffic signs and road markings provided in accordance with Section 1.9 of Schedule 2 Part 2 that shall provide a coherent and unambiguous signing and messaging system to the road Users.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

**7 Structures****7.1 General**

- 7.1.1 The New Works Requirements for structures associated with the TSE are detailed in Schedule 2: Part 2
- 7.1.2 The Company shall consult and comply with the requirements of the Contracting Authority regarding the size, weight and fixing arrangements of the TSIE.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

**8 Vehicle Restraint Systems**

**8.1 General**

- 8.1.1 New Works Requirements for vehicle restraint systems in regard to TSE are detailed in Schedule 2: Part 2.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

**9 Site Investigations****9.1 General**

- 9.1.1 Trial pits to locate existing TSE shall be undertaken in accordance with Clause 1524A of the Specification.
- 9.1.2 New Works Requirements for geotechnical or other investigations in regard to TSE are detailed in Schedule 2: Part 2.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

## **10 Testing and Certification**

### **10.1 General**

- 10.1.1 Requirements for testing and commissioning are given in Section 10 and in Specification Appendix 0/5 and Appendix 1/5 of Schedule 2: Part 4.
- 10.1.2 Not Used.
- 10.1.3 Not Used.
- 10.1.4 The Company shall undertake the connection of new TSE on to the existing Traffic Scotland Service network in a phased and / or sectional manner to avoid any potential detrimental effect on the performance, operation or stability of the instation software and Active Equipment.
- 10.1.5 The Company shall test and commission all TSE to ensure that all Active Equipment and the Passive Network are commissioned in a stable and controlled manner, minimising the risk associated with connecting devices to the live network supporting the TSS. The Company shall achieve this through a combination of phased testing, physical separation of longitudinal communication networks from existing TSE and also software protection techniques.
- 10.1.6 The Company shall ensure that the risk of Users or the public from being distracted by the testing of light or sound emitting devices is minimised.
- 10.1.7 The Company shall provide to the Contracting Authority a Commissioning, Testing and Inspection Plan (CTIP) that sets out the scope, timescale and responsibility for all connection and disconnection of TSE and testing and commissioning of TSE to complete the New Works. The Company shall consult and comply with the Contracting Authority and Transport Scotland's specialist contractor regarding the layout of the CTIP and the specific testing and commissioning of the communication links including the core switch / distribution switch within the Transmission Station. This shall be included in the Company's CTIP. The Company shall not commence any works associated with this Section 10 until the CTIP is approved in writing by the Contracting Authority. Any comments on the CTIP made by the Contracting Authority shall be incorporated into the Company's CTIP document. The CTIP shall include, but shall not be limited to the method, planning, scheduling and coordination of the following:
- (a) pre-site tests;
  - (b) pre-installation tests;
  - (c) installation tests; and
  - (d) SATs.
- 10.1.8 The CTIP shall contain methods of testing and commissioning and shall be supported by flowcharts, test descriptions and expected test results.
- 10.1.9 The Company shall follow the document template table of content detailed in Appendix G supported by appropriate sections of the installation and test document MCS602 to develop the CTIP.
- 10.1.10 The Company shall consult and comply with the Contracting Authority in creation of the CTIP and ensure that both the Contracting Authority and the Company are satisfied with

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

the content not less than three months prior to the commencement of any works associated with this Section 10.

- 10.1.11 The Company shall through implementing the CTIP demonstrate and ensure that the TSE installed in the New Works is fully commissioned and operational from the roadside and TSNCC. The confirmation of unsuccessful and successful testing shall be documented and details made available to the Contracting Authority at the end of each type of test detailed in Section 10.1.7.
- 10.1.12 Where tests are unsuccessful the Company shall undertake investigations to determine the cause of failure and shall notify the Contracting Authority in writing what shall be done by the Company to correct the failure. The Company shall undertake testing, investigation and corrections until tests are successful.
- 10.1.13 When requested in writing by the Company, the Contracting Authority shall provide all reasonable assistance, such as access to the TSNCC and testing and modifications to the TSS system and core network upstream of and including the core switch, as and when required throughout the testing and commissioning process. The notification periods required by the Contracting Authority are detailed in Section 3.1.4.
- 10.1.14 The Contracting Authority will accept back into the Transport Scotland Service Nominated TSIE Store all TSIE notified by the Company as faulty. The faulty TSIE, or part thereof, will be replaced or repaired by the Contracting Authority as detailed in Section 3.2.12.

## **10.2 Pre-Site and On Site Tests**

- 10.2.1 All TSE supplied to the Company as TSIE shall have been subject to appropriate production, factory acceptance and validation testing by the Contracting Authority to confirm that it is of suitable quality and achieves the Contracting Authority's TSE requirements.
- 10.2.2 The Contracting Authority shall also undertake appropriate TSE pre-issue tests prior to releasing the TSE to the Company.
- 10.2.3 The Company may have a representative present at any appropriate TSE pre-issue tests to be undertaken by the Contracting Authority. Any request to attend such testing shall be made in writing to the Contracting Authority at least 28 days prior to the start of any appropriate TSE pre-issue tests. The Company should note that some items of TSE are procured in bulk ahead of time, and for such items it may not be possible for the Company to have a representative present for the pre-issue tests.
- 10.2.4 The Company shall undertake a visual inspection of all TSIE to determine if the equipment is physically damaged. These inspections and subsequent actions if damage is noted shall be undertaken as follows:
- (a) for TSIE uplifted from TSS Nominated TSIE Store the Company shall undertake inspections at the time of uplift. Damage shall be reported to the operator of TSS Nominated TSIE Store where a written record of any damage shall be agreed and recorded with the operator. Depending on the nature of the damage, the operator will determine if the TSIE can be uplifted by the Company for use in the New Works.
  - (b) for TSIE issued from a TSS supplier and delivered to the Site, the Company shall undertake inspections at the time of delivery. If damage is present the Company shall take digital photographs that display the time and date on the image and immediately send by email the photographic evidence of damage to the

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

Contracting Authority. The Contracting Authority will determine if the TSIE should be returned to the supplier or if an on-site repair can be undertaken by the TSS supplier. The Company shall document the on-site repairs agreed with the Contracting Authority that require to be undertaken. If on site repairs cannot be undertaken the Company and the Contracting Authority shall jointly agree that the TSIE shall be uplifted by the supplier or immediately returned on the supplier's delivery vehicle.

- 10.2.5 TSIE inspected by the Company in accordance with Section 10.2.4 and not deemed to be satisfactory for including in the New Works shall be repaired or replaced by the Contracting Authority in accordance with Section 3.2.

### **10.3 Pre-installation Tests**

- 10.3.1 At the Company's Traffic Scotland Equipment Assembly Point the Company shall for each item of VMS equipment assemble all equipment and interconnecting cables to form a single combined arrangement prior to pre-installation testing and installation on Site. The pre-installation tests shall be undertaken using the RSC and ALM equipment allocated to the items of VMS equipment being tested.

- 10.3.2 The pre-installation tests shall include a 100 hour soak test of fully connected TSE at the Company's Traffic Scotland Equipment Assembly Point to demonstrate and confirm the correct connection, operation, configuration and compatibility with the communications devices prior to installation on Site. The Company shall advise the Contracting Authority in writing of the dates for these tests for each TSE site at least 14 days prior to the test date.

- 10.3.3 To assist in the pre-installation tests the Contracting Authority will issue a test rig to the Company comprising of a configured multi-purpose controller, housed in a cabinet suitable for the installation of TSIE controlling equipment for the TSE being tested. The Company shall advise the Contracting Authority in writing of the dates on which specific items of TSIE are to be tested not less than one month prior to the commencement of the pre-installation tests, to allow the Contracting Authority to arrange for suitable test software to be available to the Company.

- 10.3.4 Any faulty or non-operational TSIE identified during or at the end of the 100 hour soak test shall be notified within 24 hours to the Contracting Authority and shall either be replaced by the Company with fully functioning TSIE issued by the Contracting Authority, or repaired by the Contracting Authority in accordance with Section 3.2. Under these circumstances the 100 hour soak test shall be repeated so that all TSE has completed testing in accordance with Section 10.3.2.

- 10.3.5 Any faulty or non-operational equipment, other than TSIE, identified during or at the end of the 100 hour soak test shall not be installed on Site and shall be replaced immediately by the Company with fully functioning equipment. Under these circumstances the 100 hour soak test shall be repeated as a complete test.

- 10.3.6 All TSE listed in section 10.3.1 shall be fully tested and demonstrated as fully operational in accordance with the CTIP.

### **10.4 Installation Tests**

- 10.4.1 The Company shall test and commission the Passive Network, including any third party communications links from the transmission stations to the TSNCC.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- 10.4.2 The Company shall undertake all testing of fibre optic, loop and power cables in accordance with the requirements of this Part 3 and with Clauses 1506A and 1518A of the Specification and Appendix 1/5 of Part 4. The Company shall not undertake testing of sub surface vehicle detection loops until the final pavement surface course works are complete.
- 10.4.3 The Company shall undertake end to end testing of the installed fibre optic and multi-pair cables. The Company shall also test each dedicated link or circuit to each TSE location.
- 10.4.4 The Company shall test ducts and chambers in accordance with Clauses 1533A and 1532A of the Specification.
- 10.4.5 Cabinet installations shall be tested in accordance with Clause 1508A of the Specification and any specific manufacturer supplied testing regimes.
- 10.4.6 Active Equipment shall not be installed within cabinets on Site until permanent power supplies in accordance with Section 5.3 have been installed, tested and certified and all environmental protection such as cabinet seals has been completed and certified.
- 10.4.7 Active Equipment shall not be connected to the Passive Network until all tests for the individual Passive Network components have been successfully completed and certified.
- 10.4.8 All TSE shall be fully tested and demonstrated as fully operational in accordance with the CTIP.
- 10.4.9 Any faulty or non-operational TSIE identified during or at the end of these installation tests shall be notified within 24 hours to the Contracting Authority and replaced by the Company with fully functioning TSIE issued by the Contracting Authority in accordance with Section 3.2.

### **10.5 Site Acceptance Tests (SAT)**

- 10.5.1 The Company shall carry out three stages of SAT after installation of the TSE as follows:
- (a) Standalone SATs on all installed TSE.
- These tests shall demonstrate and provide certification that the TSE is functionally operational locally at each of the individual sites prior to connection to the core communication network.
- (b) Pre-commissioning SATs.
- In addition to the cable tests in accordance with the Specification and prior to connection of the end device Active Equipment onto the existing TSE, the Company shall carry out tests to prove that the IP network links across the Site are continuous and stable. The Company shall carry out testing of the access network from the core switch locations (transmission stations at fibre termination points) prior to connection to the core network.
- (c) Commissioning SATs.
- These tests shall be carried out immediately after connection of the Active Equipment to the existing TSE, and shall demonstrate and provide certification that the Active Equipment has been successfully commissioned with the existing TSE such that it is fully operated and controlled from the TSNCC. As this relies on the TSS's core network and control system, the Contracting Authority shall assist the Company in undertaking the Commissioning SATs in accordance with

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

the CTIP. The Contracting Authority will transfer the TSE on to the TSS live network and undertake final integration with assistance from the Company.

- 10.5.2 The extent of standalone and pre-commissioning SATs identified in Section 10.5.1 10.5.1(a) and 10.5.1(b) shall be maximised prior to commencing commissioning SATs identified in 10.5.1 10.5.1(c).
- 10.5.3 The Company shall ensure that the Active Equipment is connected to the existing TSE in a top down manner during SATs. The main core network links in the transmission stations shall be commissioned first, then connections from the core network in transmission stations to the local communications equipment at the roadside cabinets, then connections from the local communications equipment to the roadside equipment.
- 10.5.4 Any faulty or non-operational TSIE identified during or at the end of these SATs shall be notified within 24 hours to the Contracting Authority and shall either be replaced by the Company with fully functioning TSIE issued by the Contracting Authority, or repaired by the Contracting Authority in accordance with Section 3.2.

### **10.6 Standalone SATs**

- 10.6.1 Standalone SATs shall comprise full operational and configuration testing of all TSE at each individual site group but shall be in isolation from the core communications network and Instation. A site group comprises of all TSE at a TSE cabinet site, or a remote site where the TSE is not adjacent to, but is connected to, a TSE cabinet. All TSE shall be tested upstream from the main incoming communications interface using the same infrastructure and network configuration that will be used during operation. The Company shall determine the order of testing, either by site or by function that best fits with the Construction Programme.
- 10.6.2 The Company shall test all TSE for operational functionality and compatibility with all other TSE within the group to confirm the configuration and correct TSE addressing with the design. During local testing, the documentation that will be held within the TSE cabinets shall be verified and corrected where necessary.

### **10.7 Pre-commissioning SATs**

- 10.7.1 In addition to the cable tests in accordance with the Specification and prior to connection of the end device Active Equipment onto the existing TSE, the Company shall carry out tests to prove that the IP network links across the Site are continuous and stable. The Company shall carry out testing of the access network from the core switch locations (transmission stations at fibre termination points) prior to connection to the core network
- 10.7.2 To prevent interaction with existing live devices, the fibres allocated for use within the site shall be distinct from all existing live equipment thereby creating a virtual, independent network for this Contract.
- 10.7.3 Following successful completion of testing and certification the Company shall connect the longitudinal fibre to the core network, under the supervision of the TSS providers.
- 10.7.4 The Company shall ensure that the TSS software configuration of the Active Equipment installed within the Site shall have no adverse impact on the existing live TSE – this may be through the use of De-Militarized Zone (DMZ) or similar protection techniques as detailed in the CTIP.

### **10.8 Commissioning SATs**

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- 10.8.1 After successful completion of the pre-commissioning SATs detailed in Section 10.7, the Company shall complete Commissioning SATs and detection calibration prior to the road opening to Users. The Contracting Authority shall assist the Company in undertaking the Commissioning SATs in accordance with the CTIP by making available the TSS providers.
- 10.8.2 The Company shall undertake testing in accordance with the CTIP of all installed TSE from the TSNCC to demonstrate that the Active Equipment has been successfully commissioned with the existing TSE such that it is operational and controlled from the TSNCC. The Contracting Authority will make available to the Company one workstation to undertake these tests.
- 10.8.3 In the event that the SATs are unsuccessful the Company shall, together with the Contracting Authority, undertake testing and modifications to identify and remedy the cause of the unsuccessful test, as follows:
- (a) The Company shall repeat the testing in Section 10.5.1 and undertake modifications to the TSE downstream of the core switch detailed in Section 10.7 as necessary; and
  - (b) The Contracting Authority will undertake testing and modifications of the TSS system as required.
- 10.8.4 Following any modifications undertaken in accordance with Sections 10.8.3 the Company shall repeat the testing in accordance with Section 10.8.2.

### **10.9 Traffic Scotland Service Integration**

- 10.9.1 Once the Company has successfully completed the Commissioning SATs the Contracting Authority will transfer the TSE across to the TSS live network and undertake final integration with the assistance of the Company. The assistance to be provided by the Company may include, but is not limited to, traffic management, test engineers and fault finding/locating of any faults preventing completion of integration. If required the Company shall either replace faulty TSIE with fully functioning TSIE issued by the Contracting Authority, or assist the Contracting Authority in repairing the faulty TSIE.

### **10.10 Operational Calibration**

- 10.10.1 The Company shall undertake operational calibration of Active Equipment as required to ensure that the TSIE performs in accordance with the relevant design element at various periods after all the Site Roads are open as detailed in Section 5.5.4.6 and the CTIP.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

## **11 Documentation, Training and Handover**

### **11.1 Documentation**

- 11.1.1 The Company shall provide documentation regarding the provision, installation, composition, testing and commissioning of the TSE to allow future operation, maintenance, alteration and demolition by the Contracting Authority or its service providers, agents and third parties.
- 11.1.2 The Company shall comply with the requirements of Clauses 1504A and 1540A of the Specification and submit the TSE documentation for review in accordance with the Certification Procedure in Part 1 and Part 5. The TSE documentation shall follow the document template detailed in Appendix H and shall include, but shall not be limited to, the following information:
- (a) equipment documentation;
  - (b) as-built drawings in AutoCAD ® format to NDS 1624-09;
  - (c) testing and certification documentation;
  - (d) operational, maintenance and service manual; and
  - (e) documentation as required by Highways Agency Specification TR 1100.
- 11.1.3 The Company shall provide the cabling, testing and completion certificates associated with new, upgraded or amended power supply network and its distribution to the TSE in accordance with BS 7671: Requirements for Electrical Installations.
- 11.1.4 In addition to the recording of as-built information as the work progresses the Company shall also provide documentation described in this Section 11 to the Contracting Authority in stages as follows:
- (a) copies of all test certificates within 7 days of completion of each of the testing stages detailed in Section 10.5.1 (a), (b) and (c).
  - (b) a draft set at least 21 days prior to the commissioning period stated in Section 3.5.2;
  - (c) a final draft set prior to the road being open to Users; and
  - (d) the final set in accordance with the Agreement.
- 11.1.5 In compliance with Section 11.1.4 the as-built information shall be collated by the Company in a live document for presenting to the Contracting Authority as an updated set.

### **11.2 Training**

- 11.2.1 The Company shall provide comprehensive training for all Company provided components of the Passive Network that TSS maintainers, installers and operators may use to carry out their duties on TSE. This training shall be tailored to suit each of the following groups:
- (a) management / supervisors / operators;
  - (b) installation, testing and commissioning personnel; and
  - (c) maintenance personnel.
- 11.2.2 The training shall include classroom and site based components as necessary to demonstrate the equipment, procedures and safe handling and shall accommodate six staff in each of the groups detailed in Section 11.2.1.

**Part 3: Specific Requirements**  
**Traffic Scotland Equipment**

---

- 11.2.3 The Company shall produce training manuals and documentation to be used in the training that will subsequently be incorporated with the documentation of Section 11.1.
- 11.2.4 Successful training shall be provided and completed at least 28 days before the commissioning on Site of any Active Equipment. The Company shall submit to the Contracting Authority a training programme identifying the recommended group of staff to attend and the time periods designated.
- 11.2.5 At the end of the course those trained shall be able to expand, maintain and support the Active Equipment provided by the Company without any on-going support from the Company.
- 11.2.6 The Company shall at the end of the course provide feedback forms for the participants to complete. The Contracting Authority shall review the completed feedback forms to determine if the training has been comprehensive and has been understood by the attendees. Should the Contracting Authority determine that the training has not informed, either in part or in full as appropriate, the Company shall then improve and repeat the training course within 14 days of notification by the Contracting Authority.

### **11.3 Handover**

- 11.3.1 Prior to handover of maintenance responsibility for the ITS Active Equipment to the Contracting Authority, the Company shall:
- (a) complete all installation, testing and commissioning works detailed in this Part 3 to the satisfaction of the Contracting Authority;
  - (b) complete all training in accordance with Section 11.2; and
  - (c) provide two paper and two electronic copies of documentation in accordance with 11.1.4(c)
- 11.3.2 Not less than 14 days prior to the handover of maintenance responsibility the Company shall arrange for accompanied site visits by the TSS maintenance company personnel to highlight the location of TSE and maintenance access arrangements. In advance of the visits, briefing packs consisting of layout plans and instructions shall be prepared by the Company and distributed to the visitors.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

## **12 Programme**

### **12.1 General**

- 12.1.1 In addition to the requirements of APPENDIX E of this Part 3, the Company shall provide a detailed programme for the ITS works to the Contracting Authority within 56 days of the Effective Date for any ITS works being undertaken on Site.
- 12.1.2 The programme for ITS works shall include all appropriate references to these New Works Requirements and shall provide details of:
- (a) submission of TSE design and design data;
  - (b) Passive Network diversions, re-routing or relocation;
  - (c) commencement on site for surveys and preparation;
  - (d) commencement of Temporary Works and each Temporary Works activity;
  - (e) all disconnections and connections to TSE;
  - (f) access to TSNCC or other TS facilities;
  - (g) uplift of all TSIE from the TS nominated store;
  - (h) delivery of all client equipment direct from the supplier;
  - (i) incremental installation of all TSE;
  - (j) testing of all TSE;
  - (k) commissioning of all TSE;
  - (l) power network diversions;
  - (m) order, and completion of individual incoming power supplies from the Electricity Supply Company;
  - (n) requirement for site data or the host systems amendments; and
  - (o) issue of draft and final documentation.

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

**APPENDIX A:  
TRANSPORT SCOTLAND ISSUED EQUIPMENT**

**THIS IS APPENDIX A TO PART 3 OF THE NEW WORKS REQUIREMENTS**

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**This page is blank**

Part 3: Specific Requirements  
Traffic Scotland Equipment

**APPENDIX A**

**TRANSPORT SCOTLAND ISSUED EQUIPMENT**

The following Active Equipment and Passive Equipment components shall be issued by the Contracting Authority on behalf of Transport Scotland for use or installation in the New Works as required:

| <b>Closed Circuit Television (“CCTV”)</b><br>(with reference to Section 5.5.2 of Part 3)                                                          |                                                                           |                                                  |

**APPENDIX E****STRATEGY OF ITS NEW WORKS FOR TRAFFIC SCOTLAND EQUIPMENT DOCUMENT**

To demonstrate to the Contracting Authority the Company's understanding of the Company's potential impact to the TSS and its obligations, the Company shall prepare a "Strategy for Delivery of the ITS works for Traffic Scotland Equipment" document that identifies and captures all obligations within the Agreement. The Company shall consult and comply with the requirements of the Contracting Authority when developing this document. The Company shall not commence any works associated with this Part 3 until the Contracting Authority has given written approval of the document. The Company shall incorporate any comments made by the Contracting Authority in to the document. The strategy is a live document that shall be updated by the Company and re-approved by the Contracting Authority as the work stages progress.

The following document structure shall be used in the preparation of the strategy:

**Contents:****1. Contractor's Proposals and Approach for the ITS Works**

- 1.1 Overview of Obligations to be undertaken by the Contractor
- 1.2 Contractor's Delivery Team
- 1.3 Contractor's ITS Delivery Team and Key Staff
- 1.4 Investigations and cable tracing
- 1.5 Existing Equipment
- 1.6 Pre Construction Phase
- 1.7 Ensuring Continuous Traffic Scotland Service
- 1.8 Interface with existing Traffic Scotland network/equipment

**2 Communications and Consultation Plan**

- 2.1 Communication protocol for planned worked to the TSS
- 2.2 Emergency Contact & procedures

**3 Stages of Delivery of ITS Works****4 Delivery of an Operational Traffic Scotland Service**

- 4.1 The Scheme
- 4.2 Required TSE
- 4.3 Scheme Drawings
- 4.4 Gantry Locations
- 4.5 Power Networks
- 4.6 Energy Requirements and Sustainable Sources

**5 Company's Documentation****6 Design Approach and Checking**

- 6.1 Design Methodology
- 6.2 Pre-Works Investigations
- 6.3 Conceptual Design Validation and Detailed Design
- 6.4 Site Design
- 6.5 Power Design
- 6.6 Cabinet and TSE Site Layouts
- 6.7 CCTV
- 6.8 IP Communications Networking
- 6.9 Commissioning

**7 Proposed Traffic Scotland Equipment (TSE)**

- 7.1 Employer Issued Equipment
- 7.2 Contractor Issued Equipment

**Part 3: Specific Requirements  
Traffic Scotland Equipment**

---

**8 Construction**

- 8.1 Installation of Longitudinal Motorway Communication Ducts
- 8.2 Installation of Motorway Communication Inspection Chambers
- 8.3 Installation of Motorway Termination Pillar (TP)
- 8.4 Installation of Motorway Cabinets
- 8.5 Loop Installation
- 8.6 VMS Erection

**9 Testing and Commissioning**

- 9.1 Testing
- 9.2 Commissioning

**Appendix A - EIE Requisition Form****Appendix B - Drawings****Appendix C - Organogram****Appendix D - Key Staff and CV's****Appendix E - ITS Construction Programme****Appendix F - Consultation Meeting Minutes****Appendix G - Testing & Commissioning Flowchart**

## APPENDIX F

### TRAFFIC SCOTLAND SERVICE

The national TSS was established by the Scottish Ministers to support the delivery of the Government's purpose of sustainable economic growth. In this regard the specific objectives of the TSS are to:

- (a) Improve journey time reliability;
- (a) Reduce disruption caused by incidents, roadworks and events;
- (b) Minimise the effects of congestion by the provision of alternative route advice;
- (c) Allow travellers to make informed decisions concerning route, time, and means of transport by the provision of credible and accurate travel information; and
- (d) Improve safety and security for travellers.

The management of the TSS is undertaken by Transport Scotland's Network Operations team who form part of Transport Scotland's Trunk Road Network Management Directorate. The TSS is delivered through the Traffic Scotland Operator (TSOp) on behalf of Transport Scotland.

The Traffic Scotland Operator and Infrastructure Services Contractor (TSOISC) carries out its operational duties from the TSNCC for Transport Scotland's Trunk Road and Bus Operations Directorate 24 hours a day, 7 days a week.

Transport Scotland renews TSS providers' contracts at predefined periods, as a consequence these providers may change prior to and during the Contract. Transport Scotland's current providers in regard to Traffic Scotland Service and TSE are:

- (a) TSOISC – this provider undertakes the operations and data service related to the TSS together with the maintenance, renewal, and provision of TSE;
- (b) Traffic Scotland Systems Contract (TSSC) - this provider maintains and develops the software and associated instation hardware of the Traffic Scotland systems, in addition this provider is the design authority with respect to the IP communications and infrastructure; and
- (c) Supplier of sign and signalling equipment.

The TSNCC is located just outside of Edinburgh adjacent to the Forth Road Bridge in a newly constructed building.

Transport Scotland continues to incrementally upgrade the existing TSE to Internet Protocol (IP) communications and modify the Traffic Scotland Instation/software. The Company shall be required to protect and integrate with Transport Scotland's TSE.

More information about the TSS can be found at [www.trafficscotland.org.uk](http://www.trafficscotland.org.uk).

**APPENDIX G**  
**COMMISSIONING TEST AND INSPECTION PLAN TABLE OF CONTENTS**

- 1 Introduction**
- 2 Commissioning, Testing & Inspection Plan: Process**
  - 2.1 Overview
  - 2.2 Description of Scheme
  - 2.3 Project Interfaces
  - 2.4 Glossary
- 3 Stakeholders**
  - 3.1 Key Stakeholders
- 4 Deliverables**
  - 4.1 Responsibility Matrix
  - 4.2 Employer Notification Periods
  - 4.3 Overview of Testing and Commissioning Timetables
- 5 Electrical Power Supplies**
  - 5.1 Procurement
- 6 Employer Issued Equipment**
  - 6.1 Control of Employer Issued Equipment
  - 6.2 Employer Issued Equipment Requisition Form
  - 6.3 Contractor's Traffic Scotland Equipment Assembly Point
  - 6.4 Employer Issued Equipment Inspection Process
- 7 Scheme Commissioning Stages**
  - 7.1 Stage 1: Pre Site Testing
  - 7.2 Stage 2: Pre Installation Testing
  - 7.3 Stage 3: Installation Testing (Passive Network)
  - 7.4 Stage 4a: Standalone Site Acceptance Testing
  - 7.5 Stage 4b: Pre-Commissioning Site Acceptance Testing
  - 7.6 Stage 4c: Commissioning Site Acceptance Testing

7.7 Stage 5: Employer's Integration Testing

7.8 Stage 6 Operational Calibration

**8 Testing and Commissioning Requirements**

8.1 Communications Network

8.2 Passive Network

8.3 Active Network

**9 Decommissioning and Removal of Redundant Equipment**

**10 Issues, Risks and Mitigation**

| <b>CONTENTS</b>                                                                                                        | <b>Page Number</b> |
|------------------------------------------------------------------------------------------------------------------------|--------------------|
| Preamble to the Specification.....                                                                                     | 5                  |
| Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to this Agreement .....        | 13                 |
| Appendix 0/2: Minor Alterations to Existing Clauses, Tables and Figures Specific to This Agreement .....               | 92                 |
| Appendix 0/3: List of Numbered Appendices Referred to in the Specification and Included in This Agreement .....        | 103                |
| Appendix 0/4: List of Drawings for the New Works .....                                                                 | 111                |
| Appendix 0/5: Special National Alterations of the Overseeing Organisation of Scotland, Wales or Northern Ireland ..... | 170                |
| Appendix 1/1: Temporary Accommodation and Equipment for the Contracting Authority .....                                | 253                |
| Appendix 1/2: Vehicles for the Contracting Authority .....                                                             | 285                |
| Appendix 1/3: Communicating Systems for the Contracting Authority .....                                                | 288                |
| Appendix 1/5: Testing to be Carried out by the Company.....                                                            | 289                |
| Appendix 1/6: Supply and Delivery of Samples to the Contracting Authority .....                                        | 334                |
| Appendix 1/7: Site Extent and Limitations of Use .....                                                                 | 335                |
| Appendix 1/8: Operatives for the Contracting Authority .....                                                           | 336                |
| Appendix 1/9: Noise and Vibration Control Applicable to the New Works Site.....                                        | 337                |
| Appendix 1/12: Setting Out and Existing Ground Levels .....                                                            | 344                |
| Appendix 1/13: Programme of Works .....                                                                                | 345                |
| Appendix 1/15: Accommodation Works .....                                                                               | 348                |
| Appendix 1/16: Schedule of Works to Statutory Undertakers Apparatus .....                                              | 712                |
| Appendix 1/17: Traffic Safety and Management.....                                                                      | 1147               |
| Appendix 1/18: Design of Temporary Diversions for Traffic.....                                                         | 1163               |
| Appendix 1/19: Routeing of Vehicles .....                                                                              | 1177               |
| Appendix 1/20: Recovery of Vehicles.....                                                                               | 1180               |
| Appendix 1/21: Information Boards .....                                                                                | 1190               |
| Appendix 1/22: Progress Photographs.....                                                                               | 1191               |
| Appendix 1/23: Substances Hazardous to Health.....                                                                     | 1195               |

## Part 4 Specification

---

|                                                                                                                                                                |      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Appendix 1/24: Quality Management System .....                                                                                                                 | 1196 |
| Appendix 1/26: Temporary Automatic Speed Camera System for the Enforcement of Mandatory Speed Limits at Roads Works (TASCAR).....                              | 1197 |
| Appendix 1/27: Temporary Automatic Speed Camera System for the Enforcement of Mandatory Speed Limits at Road Works (TASCAR) – Particular Requirements.....     | 1201 |
| Appendix 2/1: List of Buildings, etc, to be Demolished .....                                                                                                   | 1203 |
| Appendix 2/4: Explosives and Blasting.....                                                                                                                     | 1204 |
| Appendix 2/5: Hazardous Materials.....                                                                                                                         | 1205 |
| Appendix 4/2: Information Required to Demonstrate Compliance of Vehicle Restraint Systems to BS 1317-1, BS EN 1317-2, BS EN 1317-3 and DD ENV 1317-4:2002..... | 1206 |
| Appendix 6/10: Ground Anchorages, Crib Walling and Gabions .....                                                                                               | 1215 |
| Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occuring Cavities and Disused Mineworkings .....                                              | 1223 |
| Appendix 6/12: Instrumentation and Monitoring.....                                                                                                             | 1233 |
| Appendix 12/1: Traffic Signs: General.....                                                                                                                     | 1236 |
| Appendix 12/2: Traffic Signed – Marker Posts .....                                                                                                             | 1237 |
| Appendix 12/3: Traffic Signs – Road Markings and Studs.....                                                                                                    | 1238 |
| Appendix 12/5: Traffic Signs – Traffic Signals.....                                                                                                            | 1240 |
| Appendix 30/1: Landscaping General .....                                                                                                                       | 1253 |
| Appendix 30/2: Weed Control .....                                                                                                                              | 1257 |
| Appendix 30/3: Control of Rabbits and Deer .....                                                                                                               | 1259 |
| Appendix 30/4: Ground Preparation.....                                                                                                                         | 1260 |
| Appendix 30/5: Grass Seeding, Wildflower Seeding and Turfing.....                                                                                              | 1262 |
| Appendix 30/6: Planting .....                                                                                                                                  | 1266 |
| Appendix 30/7: Grass, Bulbs and Wildflower Maintenance .....                                                                                                   | 1272 |
| Appendix 30/8: Watering .....                                                                                                                                  | 1274 |
| Appendix 30/9: Establishment Maintenance for Planting.....                                                                                                     | 1275 |
| Appendix 30/10: Maintenance of Established Trees and Shrubs.....                                                                                               | 1276 |
| Appendix 30/11: Management of Waterbodies.....                                                                                                                 | 1278 |
| Appendix 30/12: Specialist Ecological Measures.....                                                                                                            | 1279 |

**Preamble to the Specification****1 Preamble to the Specification**

- 1.1 The Specification for the New Works shall be the Specification for Highway Works, published by The Stationery Office as Volume 1 of the MCHW current on the Reference Date, as modified and extended by the following:
- a) Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to the Agreement;
  - b) Appendix 0/2: Agreement-Specific Minor Alterations to Existing Clauses, Tables and Figures included in the Agreement;
  - c) The Numbered Appendices listed in Appendix 0/3; and
  - d) Appendix 0/5: Special national alterations of the Overseeing Organisation of Scotland, Wales or Northern Ireland.
- 1.2 Appendix 0/4 contains a list of the Drawings.
- 1.3 The relevant publication date of each page of the Specification for Highway Works is given in the Schedule of Pages and Relevant Publication Dates, contained in this Preamble to the Specification.
- 1.4 An Additional Clause, as indicated by a suffix 'A' in Appendix 0/5 is an alteration originating from the Overseeing Organisation of Scotland, Wales or Northern Ireland. An Additional Clause as indicated by a suffix 'AR' in Appendix 0/1 is an Agreement-specific alteration.
- 1.5 A Substitute Clause, as indicated by a suffix 'S' in Appendix 0/5 is an alteration originating from the Overseeing Organisation of Scotland, Wales or Northern Ireland. A Substitute Clause as indicated by a suffix 'SR' in Appendix 0/1 is an Agreement-specific alteration.
- 1.6 A Cancelled Clause, as indicated by a suffix 'C' in Appendix 0/5 is an alteration originating from the Overseeing Organisation of Scotland, Wales or Northern Ireland. A Cancelled Clause indicated by a suffix 'CR' in Appendix 0/1 is an Agreement-specific alteration.
- 1.7 Insofar as any of the Numbered Appendices may conflict or be inconsistent with any provision in the Specification for Highway Works the Numbered Appendices shall always prevail. Additionally, Numbered Appendices 0/1 and 0/2 shall take precedence over Numbered Appendix 0/5.
- 1.8 Any reference in this Part 4 to a Specification Clause number or Appendix shall be deemed to refer to the corresponding Substitute Clause number or Appendix listed in Appendix 0/1, 0/2 or 0/5.
- 1.9 Where a Clause is altered any original Table / Figure referred to in the Clause shall apply unless the Table / Figure is also altered. Where a Table / Figure is altered any reference in a Clause to the original Table / Figure shall apply to the altered Table / Figure.
- 1.10 Where a Clause in the Specification relates to work, goods or materials which are not required for the New Works it shall be deemed not to apply.
- 1.11 Any Appendix referred to in the Specification which is not used shall be deemed not to apply.
- 1.12 Where a Clause in the Specification is prefixed by an # this indicates that this particular Clause has a substitute National Alteration for one or more of the Overseeing Organisations of Scotland, Wales or Northern Ireland.

---

**Part 4 Specification**

---

**Preamble to the Specification**

- 1.13 Substitute or additional National Clauses shall be used within countries to which they specifically apply and they are deemed to replace corresponding Clauses in the main text of the Specification as appropriate.
- 1.14 The substitute National Clauses are located at the end of the relevant Series together with the additional National Clauses of the Overseeing Organisation.
- 1.15 Other than where references to the Overseeing Organisation are made in the context of the Overseeing Organisation granting statutory or type approvals, the roles and functions of the Overseeing Organisation shall be undertaken by the Contracting Authority.
- 1.16 Where the Specification requires the provision of documentation to the Overseeing Organisation for statutory or type approval such documentation shall be provided to Transport Scotland with a minimum of four hard copies and one pdf copy provided to the Contracting Authority for information.
- 1.17 The Specification is used in conjunction with this Agreement and, the delegation of the roles and functions of the Overseeing Organisation as stated in Section 1.12 above shall be amended as follows:
- a) If any agreement, consent or approval required to be obtained from the Overseeing Organisation impacts on the health and safety of the general public, the environment or any property or equipment not owned or operated by the Company or the New Works Contractor, such agreement, consent, or approval shall be obtained from the Contracting Authority.
  - b) Where the Specification provides for the Overseeing Organisation to require a test, waive the requirement for a test or alter testing frequency, the party to whom the Overseeing Organisation's roles and functions have been ascribed by Clause 1.15 above shall exercise such decisions in accordance with the New Works Requirements stated in this Agreement.
- 1.18 Where a Clause or Sub-Clause in the Specification is annotated by "05/01" or similar, this indicates the relevant publication date that alteration(s) to the Clause or Sub-Clause were made.
- 1.19 The first double digit refers to the month, and the second double digit refers to the year.
- 1.20 The following interpretations shall be applied to words or terms used in documents referred to in this Part 4:
- a) except where the context requires otherwise, "Engineer" shall be deemed to be a reference to the "Designer" where such an interpretation is necessary for the Company to fulfil its obligations in regard to the Design.
  - b) where a Numbered Appendix is referred to it shall mean a reference to the Numbered Appendix included in this Part 4
  - c) all references to the "Site" shall be deemed to be references to lands and other places on, under, in, or through which the New Works shall be constructed; and
  - d) any reference to a "British Standard" shall permit the use of an equivalent European standard.

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p>August inclusive. During the bird nesting season tree work shall be carried out only after an inspection by the ecological clerk of works establishes that there are no nesting birds present, and only after receiving consent in writing from the Contracting Authority.</p> <p>1.3.10 Any bat roosts identified by the Company shall immediately be reported to the Contracting Authority and ecological clerk of works.</p> <p>1.3.11 No trees identified during the ecological surveys as containing confirmed bat roosts or having the potential for bat roosting shall be felled after 31 October unless authorised by Scottish Natural Heritage. No trees containing confirmed bat roosts shall be felled without the necessary licences having been obtained from the Scottish Natural Heritage. Any licences required from Scottish Natural Heritage shall be arranged by the Company once the species of bat and population size has been confirmed by a licensed bat worker.</p> <p>1.3.12 The Company shall notify the Contracting Authority and ecological clerk of works not less than 7 days in advance of felling any trees containing confirmed bat roosts or having the potential for bat roosting.</p> <p>1.3.13 The Company shall undertake a pre-felling inspection of all trees identified as containing confirmed bat roosts or having the potential for bat roosting under the supervision of a licensed bat worker. Each tree with bat roosts or potential for bat roosting shall be inspected by safest practicable means and searched for signs of bats, using a torch and endoscope where necessary, as directed by the licensed bat worker. Where no signs of bats and no potential access points are identified the tree may be felled subject to the approval of the licensed bat worker.</p> <p>1.3.14 Where felling of trees containing bat roosts is undertaken under licence and where potential access points for bats are identified, the trees shall be section felled with the feature of interest lowered gently to the ground on a rope in the presence of the licensed bat worker, searched and left on the ground for a period of 24 to 48 hours with the access point exposed to allow any roosting bats to disperse.</p> <p>1.3.15 Should any bats be found to be present in trees during felling the Company shall cease felling works in the area and immediately contact Scottish Natural Heritage (SNH), the licensed bat worker and the Contracting Authority and seek their instructions. No further works shall be undertaken on trees containing roosting bats without permission from SNH.</p> <p>1.4 Weather Conditions for Tree Work</p> <p>1.4.1 Work shall cease when trees are very wet, covered in ice or snow, or during storms or high winds except in emergencies, where any work shall be the minimum to make the situation safe.</p> <p>1.5 Grubbing up Stumps and Filling Voids</p> <p>1.5.1 All stumps and tree roots shall be grubbed up, except stumps in woodland within areas of existing vegetation to be retained, provided this does not damage trees which are being retained. If a stump cannot be removed it</p> |

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p>shall be cut at least 300 millimetres below ground level, the hole shall be filled with soil, compacted, levelled and seeded.</p> <p>1.6 Chipping of Wood and Bark</p> <p>1.6.1 Small timber, twigs, bark and roots not infected by honey fungus may be chipped and left on the Site to compost at agreed locations and shall be turned over at specified intervals. The Company shall remove surplus timber from the New Works Site, unless 270AR(1.10) applies.</p> <p>1.7 Preliminary Tree Work - BS 3998: 1989</p> <p>1.7.1 The Company shall give notice of proposed tree work in conservation areas, and shall seek permission from the relevant authority where trees are protected by a Tree Preservation Order.</p> <p>1.7.2 Pruning works include the removal of dead, diseased or damaged branches, removal of heavy branches, crown lifting, crown thinning, pruning damaged tree saplings, bushes and roots and pruning and shaping of overgrown / neglected hedges.</p> <p>1.7.3 When a branch is to be removed the cut surface should be made at a fork or at the main stem and the final cut should be just outside the branch bark collar, where present. When there is not a collar the angle of the cut shall be the mirror image of the branch bark ridge (BS 3998: 1989: Page 4; 13 and Figure 1). The outline of pruned trees shall be fair and symmetrical.</p> <p>1.7.4 Sealing of the cut surface with a proprietary preparation shall be carried out when there is a high risk of fungal or bacterial infection. Table 1 of Appendix C of BS 3998 lists suitable formulations which may be used. Otherwise heartwood exposed by pruning shall be left untreated so that the surface dries out. A bitumastic or latex based paint shall be applied to the outer edge of the cut to prevent drying and dieback of the cambium. Treatment of the whole wound is for cosmetic reasons only; a thin layer of bitumastic or latex based paint or household emulsion can be applied.</p> <p>1.7.5 Heavy limbs shall be taken down in sections and shall be lowered with ropes to avoid damage to the tree and its surroundings. The method of pruning and sealing of cut surfaces shall be as prescribed.</p> <p>1.7.6 In crown lifting lower branches shall be removed to a given height above ground level in a manner described.</p> <p>1.7.7 Crown thinning involves the removal of a proportion of secondary branch growth throughout the crown to produce an open crown. Thinning shall not be too severe as it may induce fresh growth of epicormic shoots.</p> <p>1.7.8 Damaged tree saplings shall be cut back to sound wood just above a bud. Damaged bushes shall be cut to sound wood or the whole plant shall be cut to base to allow fresh growth to take over.</p> <p>1.8 Timber - Stacking</p> <p>1.8.1 Timber shall not be stacked against existing trees and shrubs to be retained. Timber stacks shall not exceed one metre high under any</p> |

Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|               | <p>circumstances. Timber stacks shall be constructed in such a way as to prevent the movement or slippage of timber.</p> <p>1.9 Existing Woodland</p> <p>1.9.1 The timber from native species to be felled within or adjacent to, existing woodland shall be left within the woodland for habitat enhancement, to the approval of SNH. Stumps within woodland are not to be ground down or removed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 271AR         | <p><b>1 Existing Vegetation to be Protected</b></p> <p>1.1 Protection of existing vegetation which is to be retained shall be in accordance with BS 5837: 2005 and as follows:</p> <ul style="list-style-type: none"> <li>a) The Company shall ensure that all work is safeguarded against damage due to the carrying out of other Site operations. Should any damage or loss be caused to any existing or completed works then the Company shall reinstate and make good such damage or loss all with the acknowledgement in writing of the Contracting Authority.</li> <li>b) No existing mature trees, protected or designated landscape areas or other artefact shall be removed or cleaned without the prior written agreement of the Contracting Authority. The proposed extent of Site clearance works shall be submitted to the Contracting Authority prior to the New Works starting on the New Works Site.</li> <li>c) Trees, bushes, undergrowth and other vegetation to be preserved shall be fenced off with type CW 120 cleft chestnut pale fencing complying with BS 1722, Part 4 1986, placed in accordance with BS 5837: 2012, and shall be maintained in effective condition until the Works have been fully completed. Fences shall be erected before the Works commence. No existing trees, shrubs, or other plants shall be removed or cut without specific written instructions from the Designer. Protective fencing in accordance with BS 5837 2005 shall be erected prior to commencement of the New Works to protect the areas shown in drawings. No soil, spoil, fuel oil, chemicals, construction materials or rubbish shall be stored or tipped within the spread of existing trees, shrubs or hedges.</li> <li>d) Should any tree or shrub be mistakenly uprooted, destroyed, or in the opinion of the Contracting Authority, be damaged beyond reasonable chance of survival in its original shape due to the Company's negligence, then the Company shall provide and plant suitable replacement trees or shrubs of a similar type and age. If such replacement trees or shrubs are not obtainable, alternative trees or shrubs, acknowledged in writing by the Contracting Authority, shall be provided and planted. The Company's liability shall continue until the replacement trees and shrubs have survived the winter following the planting and have completed</li> </ul> |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Clause 6.18</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 370AR         | <p><b>1 Rabbit, Hare, Deer, Otter and Badger Fencing Specifications</b></p> <p>1.1 The extent of fencing for protected fauna shall meet the requirements of SNH. The Company shall consult and comply with SNH in this respect.</p> <p>1.2 Rabbit and Hare Fencing</p> <p>1.2.1 Fences to protect planting areas from rabbits and hares shall be in accordance with the following specification:</p> <p>a) Post and mesh fence with a galvanised hexagonal wire mesh 1200 millimetres wide having maximum openings of 31 millimetres and 1.25 millimetres (18 gauge) wire. Mesh to be affixed to two galvanised line wires of minimum 4 millimetres in diameter at 900 millimetres and 150 millimetres above ground level using galvanised fixing rings every 600 millimetres on top wire and 1200 millimetres on bottom wire. Mesh to be buried to 150 millimetres depth and returned outwards from protected area. End and change of direction posts to be 125 millimetres diameter round section, 1.87 metres long and driven 770 millimetres into the ground. Strut to be 65 millimetres round section located in notch on main post and held in the ground by 0.6 metre split rail. Line posts to be 1.6 metres long and 65 millimetres square section driven 500 millimetres into the ground at 4 metre centres. Mesh also to be fixed to line posts by six staples per post.</p> <p>1.3 Deer Fencing</p> <p>1.3.1 Fences to protect planting areas from deer shall be in accordance with the following specification:</p> <p>a) 1.80 metres high timber post and 4 wire deer fence with rectangular wire mesh.</p> <p>b) Fence shall be constructed to the details on HCD Drawing H12 and BS1722 Parts 2 &amp; 3 with the following additions and amendments:-</p> <p>(i) Top rectangular wire mesh to be type C/6/90/30.</p> <p>(ii) Bottom rectangular wire mesh to be type C/8/80/15.</p> <p>(iii) Timber posts and struts are to be for a 1.8 metres high fence selected from either Table 4 or 5 from BS1722 Part 3. Timber straining posts are to be 2.90 metres length, 178 millimetres minimum diameter.</p> <p>(iv) Intermediate posts are to be set or driven into the ground to a depth of 0.6 metres. Straining posts shall be set into</p> |

| Nominal installation depth (millimeter) | <18                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 18 to 25 | >25    |        |        |                                         |     |          |     |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.2.2         | The shape of the coarse aggregate shall comply with a maximum flakiness index of Category FI25 as defined in BS EN 13043:2002 Aggregates for Bituminous Mixtures and Surface Treatments for Roads, Airfields and Other Trafficked Areas, clause 4.1.6.                                                                                                                                                                          |
| 1.2.3         | Fine aggregate shall comply with Clause 901 and shall comprise crushed fine aggregate derived from, rock, slag or gravel, which may be blended with not more than 50% of natural sand.                                                                                                                                                                                                                                          |
| 1.2.4         | The resistance to polishing of the coarse aggregate shall have a minimum declared PSV category specified in Appendix 7/1 in accordance with BS EN 13043:2002 Aggregates for Bituminous Mixtures and Surface Treatments for Roads, Airfields and Other Trafficked Areas, clause 4.2.3.                                                                                                                                           |
| 1.2.5         | The resistance to abrasion of coarse aggregate shall have a maximum AAV specified in Appendix 7/1 in accordance with BS EN 13043:2002 Aggregates for Bituminous Mixtures and Surface Treatments for Roads, Airfields and Other Trafficked Areas, clause 4.2.                                                                                                                                                                    |
| 1.3           | Filler                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1.3.1         | Added filler aggregate shall be hydrated lime, crushed limestone or Portland Cement, in accordance with the requirements of BS EN 13108-4, Bituminous mixtures: Material specifications , Part 4: Hot Rolled Asphalt and shall be not less than 2% by mass of total aggregate.                                                                                                                                                  |
| 1.4           | Binder                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1.4.1         | Bitumen shall comply with BS EN 12591:2000 Bitumen and Bituminous Binders: Specifications for Paving Grade Bitumens or BS 3690-3:1990 Bitumens for Building and Civil Engineering: Specification for Mixtures of Bitumen with Pitch, Tar and Trinidad Lake Asphalt, and shall be produced in plants that shall be registered to BS EN ISO 9001 'Sector Scheme for the Supply of Paving Grade Binders', described in Appendix A. |
| 1.4.2         | The said binder shall not be harder than penetration reference 50 (paving grade 40/60).                                                                                                                                                                                                                                                                                                                                         |
| 1.4.3         | If the deformation resistance requirement in sub-Clause 18 of this Clause shall not be required, then the binder penetration reference shall be as specified in Appendix 7/1.                                                                                                                                                                                                                                                   |
| 1.5           | Binder Modifiers                                                                                                                                                                                                                                                                                                                                                                                                                |
| 1.5.1         | Binder modifiers pre-blended with bitumen or binder modifiers, including but not limited to natural or man-made fibres, which shall be added or blended with base bitumen complying with BS EN 12591:2000 Bitumen and Bituminous Binders: Specifications for Paving Grade Bitumens of the stated penetration range at the mixing plant shall have a British Board of Agrément HAPAS Roads and Bridges Certificate.              |
| 1.5.2         | In the event that no such certificates have been issued, binder modifiers, pre-blended modified binders or additives shall not be used without the prior written approval of the Overseeing Organisation.                                                                                                                                                                                                                       |
| 1.5.3         | In the event that no British Board of Agrément HAPAS Roads and Bridges                                                                                                                                                                                                                                                                                                                                                          |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p>Certificates have been issued, the Company shall provide with its Design a data sheet giving details of the properties of the modified binders or additives proposed including those referred to in Appendix 7/1.</p> <p>1.5.4 The Company shall provide the rheological product identification data for pre-blended modified binders in accordance with Clause 956 and cohesion in accordance with Clause 957</p> <p>1.6 Mixture</p> <p>1.6.1 The binder drainage of the loose mixture at the target composition at a temperature of 175°C in accordance with <a href="#">BS 594987:2010</a> shall not be more than 0.3% by total mass of mixture.</p> <p>1.6.2 The agreed binder content for the mixture shall be the target binder content <math>\pm 0.6\%</math>.</p> <p>1.7 Job Mixture Approval</p> <p>1.7.1 Details of the proposed mixture Design from each asphalt mixing plant shall be submitted to the Overseeing Organisation.</p> <p>1.7.2 The information may be obtained from either a job mixture trial or from the use of the mixture on a previous contract carried out in accordance with this Clause, and shall include all the following particulars:</p> <ul style="list-style-type: none"> <li>a) bitumen penetration reference;</li> <li>b) quantities of binder and aggregate;</li> <li>c) aggregate source and grading;</li> <li>d) proprietary name and generic type of binder modifier;</li> <li>e) quantity of any binder modifier, including natural or man-made fibres added at the mixer; and</li> <li>f) modified binder and mixture data requirements specified in Appendix 7/1.</li> </ul> <p>1.7.3 If a modified binder including but not limited to any proportion of the modifier shall not be fully recovered on analysis for determination of binder content details of alterations to the test method or the correction necessary to the results together with supporting data shall be submitted to the Overseeing Organisation with the proposed mixture Design for prior written consent by the Overseeing Organisation to implement them.</p> <p>1.7.4 The mixture shall be approved in writing by the Overseeing Organisation as the job standard mixture provided that:</p> <ul style="list-style-type: none"> <li>a) the mixture Design proposed complies with sub-Clauses 1 and 3 of this Clause;</li> <li>b) information has been submitted in accordance with sub-Clauses 9 and 10 of this Clause;</li> <li>c) information submitted in accordance with sub-Clause 16 of this Clause has been approved in writing by the Overseeing</li> </ul> |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p style="text-align: center;">Organisation.</p> <p>1.7.5 If the mix Design or constituent materials of a job standard mixture shall be changed by the Company, details of the revised mixture shall be submitted for written approval in accordance with sub-Clause 17 of this Clause.</p> <p>1.7.6 Job mixture trials may be carried out on or off the New Works Site, however material laid for a job mixture trial on the New Works Site which complies with this Specification may form part of the binder/regulating course in the permanent works.</p> <p>1.7.7 If carried out off site, trials may be arranged independently or in conjunction with other works.</p> <p>1.8 Mixing</p> <p>1.8.1 Unless otherwise specified by the supplier of the modified binder, stone mastic asphalt shall be mixed at a temperature in accordance with the requirements of BS EN 13108 Bituminous mixtures: Material specifications &amp; PD 6691, for the penetration reference of the bitumen.</p> <p>1.8.2 This shall be done in such manner that a homogeneous mixture of aggregate, filler, bitumen and additive results.</p> <p>1.8.3 At the time of mixing, the coarse aggregate shall be in a surface dry condition.</p> <p>1.9 Transportation</p> <p>1.9.1 The transportation of stone mastic asphalt shall be in accordance with sub-Clause 901.3.</p> <p>1.10 Permanent Works</p> <p>1.10.1 When specified in Appendix 7/1, sampling and testing shall be carried out to establish compliance of material laid in the permanent works.</p> <p>1.11 Sampling from the Laid Material</p> <p>1.11.1 Samples of uncompacted material shall be taken from the paver as near to where the cores shall be taken as shall be practicable, in accordance with BS EN 12697 Bituminous mixtures: Test methods for hot mix asphalt, Part 27: Sampling.</p> <p>1.11.2 Six 200 millimetre diameter cores shall be cut, where practical from the centre of the Lane out of material from each mixing plant:</p> <ul style="list-style-type: none"> <li>a) from material laid specially in a job mixture approval trial;</li> <li>b) from the first 1 kilometre length of stone mastic asphalt from a mixing plant laid in the permanent works; or</li> <li>c) within 3 days of laying stone mastic asphalt from a mixing plant in the permanent works, where less than 1 kilometre length has been laid whichever occurs first.</li> </ul> <p>1.11.3 The 200 millimetre diameter cores shall be cut within 3 days of laying the material unless they have been cut under the requirements of sub-Clause</p> |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                           |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | 35 of this Clause.                                                                                                                                                                                                                                                                                                                                               |
| 1.11.4        | The cores shall be transported as soon as possible to the laboratory.                                                                                                                                                                                                                                                                                            |
| 1.11.5        | If the storage period shall be less than 4 days, the storage temperature shall be within the range 0°C to 25°C.                                                                                                                                                                                                                                                  |
| 1.11.6        | For storage beyond 4 days, the temperature shall be within the range 0°C to 5°C. Cores shall be stored on a flat face on a horizontal surface, and shall not be stacked.                                                                                                                                                                                         |
| 1.11.7        | Site storage of cores where unavoidable and conditions of transportation shall be as close as shall be practicable to the laboratory conditions.                                                                                                                                                                                                                 |
| 1.11.8        | The storage temperature and times, including whilst cores are on the New Works Site shall be recorded.                                                                                                                                                                                                                                                           |
| 1.11.9        | Three pairs of 150 millimetre diameter cores shall be cut at the same chainages as the 200 millimetre diameter core.                                                                                                                                                                                                                                             |
| 1.11.10       | One core of each pair shall be taken from the centre of the lane adjacent to the 200 millimetre diameter core and one whose centre shall be between 500 millimetre and 1000 millimetre from the edge of the mat.                                                                                                                                                 |
| 1.11.11       | Cores shall be taken after the stone mastic asphalt has cooled to ambient temperature and not less than 12 hours after laying and before trafficking unless otherwise specified in Appendix 7/1.                                                                                                                                                                 |
| 1.11.12       | The walls and base of all holes from which core samples shall have been cut shall be painted with hot bitumen or cold applied polymer modified intermediate or premium grade bitumen emulsion containing normally 60% binder immediately prior to making good.                                                                                                   |
| 1.11.13       | Core holes shall be backfilled with materials compacted to refusal with a circular headed vibrating hammer in layers not exceeding 75 millimetre thick.                                                                                                                                                                                                          |
| 1.11.14       | Hot base material shall be similar to existing pavement.                                                                                                                                                                                                                                                                                                         |
| 1.11.15       | In the permanent works, after the first 6 cores and where the required thickness of the material exceeds 25 millimetre for material from each mixing plant not less than one pair of 200 millimetre m diameter cores shall be cut from the centre of the Lane every 1 Lane kilometre laid a day's production if less than 1 Lane kilometre shall have been laid. |
| 1.12          | Tests and Calculations                                                                                                                                                                                                                                                                                                                                           |
| 1.12.1        | For each uncompacted sample the compositional analysis shall be carried out in accordance with BS EN 12697 Bituminous mixtures: Test methods for hot mix asphalt, Part 1: Soluble binder content & Part 2: Determination of particle size distribution corrected by any correction factor approved under sub-Clause 16 of this Clause.                           |
| 1.12.2        | Each six consecutive 200 millimetre diameter cores of material from the same mixing plant shall form a set of cores on a running basis.                                                                                                                                                                                                                          |
| 1.12.3        | For each set the wheeltracking rate and rut depth shall be determined in accordance with the procedure in BS 598-110:1998 Sampling and                                                                                                                                                                                                                           |

Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Condition of core<br>(Tick as appropriate)                      | Good | De-bonded | Shattered                             | Partial recovery |
|                                                                 |      |           |                                       |                  |
| Depth of coring                                                 |      |           |                                       |                  |
| Core length                                                     |      |           |                                       |                  |
| Any additional information on the core not included above       |      |           |                                       |                  |

Notes:

1. Insert as appropriate i.e. D2AP, S2 etc.
2. Insert eastbound, westbound, northbound, and southbound as appropriate.
3. Insert appropriate descriptor e.g. lane 1 (nearside), lane 2 (offside), hard shoulder.

| 1270AR        | <p><b>1 Passively Safe Sign Posts</b></p> <p>1.1 Passively safe sign posts shall be in accordance with BS EN 12767: 2007 erected in accordance with the manufacturers instructions. Conforms to EN61347-2-11 Part 1;</p> <p>a)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1272AR        | <p><b>1 Chart Node and Section Markers</b></p> <p>1.1 Cored thermoplastic road markers shall be installed as chart nodes using the following method:</p> <p>a) A 100 millimetre diameter x 20 millimetre deep socket shall be formed using a central pilot bit surrounded by an annular bit. The pilot bit permits drilling of an annulus by the annular bit in a precise location by guiding the annular bit.</p> <p>b) The base of the pocket after breaking out the surface material shall be left jagged. This jagged base assists in the retention of the stud in the pocket.</p> <p>c) The pocket shall be filled with hot fluid thermoplastic material to the uppermost edge of the pocket projecting slightly above the road surface. This projection depends on the surface tension of the material. The material is then allowed to cool and set to form a stud.</p> <p>d) The material shall consist of a plastic resin with the white filler and reflective glass particles to BS 3262. This is the same material as is used for white lining purposes.</p> <p>1.2 Notwithstanding any other requirements of the Agreement, record drawings of the chart node locations at a scale of 1:500 shall be provided to the Contracting Authority within 7 days of the issue of the Final Completion Certificate for the New Works. The record drawings shall locate the chart nodes as a series of dimensions from carriageway features. The local and national grid co-ordinates of all chart nodes shall be detailed on the record drawings.</p> |

|               | <p>for the pile design.</p> <p>1.6 Preliminary trial piles are not permitted to be incorporated into the Permanent Works.</p> <p>1.7 The Company shall complete Appendix 16/9 to include</p> <ul style="list-style-type: none"> <li>a) the overall pile testing strategy in relation to verification of the pile design and partial resistance factors and model factors to be adopted;</li> <li>b) the numbers and types of static load tests to be carried out;</li> <li>c) the proposed locations of preliminary trial piles;</li> <li>d) whether additional location specific ground investigation is required;</li> <li>e) the programme for installation and testing; and</li> <li>f) details of the instrumentation to be installed.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>1671AR</b> | <p><b>1 Pile Integrity Tests</b></p> <p>1.1 Pile Integrity Tests</p> <p>1.1.1 Further to Clause 1608:</p> <ul style="list-style-type: none"> <li>a) The Company shall carry out a programme of integrity testing of piles. This shall include use of one or more of the following method on all piles: <ul style="list-style-type: none"> <li>(i) Impulse Method;</li> <li>(ii) Sonic Echo Frequency Response or Transient Dynamic steady state vibration method.</li> </ul> </li> <li>b) In addition to the above enhanced integrity testing shall be undertaken as follows: <ul style="list-style-type: none"> <li>(i) Cross hole sonic logging in all bored cast in situ piles over the full length of the shaft. The number of logging tubes shall be not less than 2.5 times the pile diameter in metres with a minimum of four.</li> <li>(ii) Coring of the lower part of the concrete shaft and contact between the pile base and rock in rock socket piles where end bearing resistance is considered in the design. The coring shall be used to demonstrate the cleanliness of the contact (concrete to rock) and that the rock is undisturbed. Core recovery shall be 100%. Core dimensions shall be at least 0.5 metres of concrete, 1.5 metres of rock both with a diameter of at least 100 millimetres. The resulting bore shall be backfilled with cement grout. This requirement is in addition to that in Clause 1673 AR below.</li> <li>(iii) The Company shall complete Appendix 16/8 with</li> </ul> </li> </ul> |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p>detailed scope of integrity testing.</p> <p>(iv) All piles with a diameter greater than or equal to 900mm shall be tested.</p> <p>(v) Piles with a diameter less than 900mm shall be sample tested, at a frequency of one pile tested in every four piles, or two piles tested per discrete foundation (pile cap), whichever is greater.</p> <p>1.2 Dynamic Pile Testing</p> <p>1.2.1 Further to Clause 1608:</p> <p>a) If dynamic pile testing is proposed it shall be calibrated against static load tests carried out on comparable piles (i.e. of the same type and similar size constructed in similar ground conditions at the same site using the same installation criteria). Restrike tests shall be carried out unless it has been demonstrated that relaxation following the end of driving is not significant.</p> <p>b) The limitations of dynamic pile testing set out in section C14 of the Guidance Notes in Part C of the ICE Specification for Piling and Embedded Walls 2nd Edition shall be taken into account.</p> <p>1.3 Quasi Static (Rapid Loading) Pile Testing</p> <p>1.3.1 If quasi static testing is proposed to be used it shall be calibrated against static load tests carried out on comparable piles (i.e. of the same type and similar size constructed in the same ground conditions at the same site using the same installation criteria).</p> <p>1.3.2 The limitations of quasi static pile testing set out in section C14 of the Guidance Notes in Part C of the ICE Specification for Piling and Embedded Walls 2<sup>nd</sup> Edition shall be taken into account.</p> |
| <b>1672AR</b> | <p><b>1 Drilling Fluid</b></p> <p>1.1 If drilling fluid other than water is proposed for bored piles, constructed the Company shall include in Appendix 16/18 details of the methods to be adopted to avoid contamination of the ground. The use of drilling fluid other than water shall only be permitted where the Company has obtained prior approval from the Scottish Environment Protection Agency ("SEPA").</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>1673AR</b> | <p><b>1 Ground Investigation</b></p> <p>1.1 If rock socket piles are required to mobilise base resistance under reversible or irreversible serviceability limit state ("SLS") load combinations a borehole shall be made at each pile position prior to pile construction to verify the rock quality at the proposed founding level. Continuous cores shall be recovered from two pile diameters above pile toe level to two pile diameters below pile toe level and appropriate in situ and / or laboratory testing carried out. Core diameter shall be at least</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p>100 millimetres. The resulting bore shall be backfilled with cement grout.</p> <p>1.2 Borehole frequency shall be as follows:</p> <p>1.2.1 All piles with a diameter greater than or equal to 900mm shall have a borehole at each pile position.</p> <p>1.2.2 Piles with a diameter less than 900mm shall have borehole(s) on a sample basis, at a frequency of one borehole for every ten piles, or two boreholes per discrete foundation (pile cap), whichever is greater. This frequency shall increase if the results of rock coring show significant variability.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>1674AR</b> | <p><b>1 Geotechnical Reporting</b></p> <p>1.1 The Company shall update the Ground Investigation Report(s) to take account of any additional ground investigations or other relevant additional information providing justification for any changes made.</p> <p>1.2 The Company shall update their Geotechnical Design Reports to “for construction” status to take account of any relevant additional information providing justification for any changes made when compared to their original Geotechnical Design Report(s) with contents as per Clause 2.8 of BS EN 1997-1:2004 along with the following additional requirements:</p> <p>a) The following is added to Clause 2.8(3) of BS EN 1997-1:2004 after “...including actions”:</p> <ul style="list-style-type: none"> <li>(i) characteristic values of pile resistances, including justification, as appropriate;</li> <li>(ii) design values of pile resistances, including justification, as appropriate; and</li> <li>(iii) characteristic value of soil and rock properties, including justification, as appropriate.</li> </ul> <p>b) The modified Clause 2.8(3) of BS EN 1997-1:2004 shall be considered to be a principle in the context of the Eurocodes, i.e. 2.8(3)P.</p> <p>1.3 Following completion of construction the Company shall provide a full close-out report of the as-built Structures. The contents of the close-out report shall include, but not be limited to, the following:</p> <ul style="list-style-type: none"> <li>a) As-built location and geometry of all completed New Works including any Temporary Works left, with permission of the Contracting Authority, in-situ;</li> <li>b) Construction records for all Structures;</li> <li>c) All integrity test results;</li> <li>d) All strength measurement test results on materials (concrete cylinder / cube etc.) for Permanent Works and, with permission of</li> </ul> |

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

| Clause Number   | Title and Written Text                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |        |           |                |                 |                 |                 |

|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <p>Organisation;</p> <p>c) All couplers shall be covered by a relevant CARES Technical Approval or other relevant product approval from an appropriate UKAS accredited product certification body; and</p> <p>d) Concrete cover shall be maintained.</p>                                                             |
| 1.2     | Tensile Capacity                                                                                                                                                                                                                                                                                                     |
| 1.2.1   | The tensile strength of the coupled bar should exceed 540 newtons per square millimetre for BS4449:2005 grade B500B or Grade B500C hot rolled reinforcement steel.                                                                                                                                                   |
| 1.3     | Slip (permanent elongation test)                                                                                                                                                                                                                                                                                     |
| 1.3.1   | When a test is made of a representative gauge length assembly comprising reinforcement size, grade and profile to be used and a coupler of the precise type to be used, the permanent elongation after loading to $0.6f_y$ , shall not exceed 0.1 millimetres.                                                       |
| 1.4     | Fatigue                                                                                                                                                                                                                                                                                                              |
| 1.4.1   | The Company shall obtain from the coupler manufacturer the fatigue design S-N curve established as defined below, which he shall furnish to the Designer, Checker and Overseeing Organisation with the Design Documentation. Existing fatigue design S-N data may be taken as an acceptable alternative.             |
| 1.5     | Performance testing                                                                                                                                                                                                                                                                                                  |
| 1.5.1   | The material to be used for the performance tests shall be in all respects similar to those which the Company proposes to use in the New Works.                                                                                                                                                                      |
| 1.5.2   | Mechanical connections shall be qualified for use in the construction on the basis of the following performance tests:                                                                                                                                                                                               |
| 1.6     | Static tensile strength tests                                                                                                                                                                                                                                                                                        |
| 1.6.1   | A minimum number of six static tensile strength tests shall be conducted considering the range of all variables. All test samples shall meet the requirements of sub Clause 1.2 above.                                                                                                                               |
| 1.7     | Slip testing                                                                                                                                                                                                                                                                                                         |
| 1.7.1   | A minimum number of two slip tests shall be conducted considering the range of variables. All test samples shall meet the requirements of sub-Clause 1.3 above.                                                                                                                                                      |
| 1.8     | Fatigue testing                                                                                                                                                                                                                                                                                                      |
| 1.8.1   | <b>Sampling</b>                                                                                                                                                                                                                                                                                                      |
| 1.8.1.1 | Couplers shall be formed into batches of 20 bars of a single type and size, manufactured at the same time. All couplers of the same diameter should preferably be from the same melt. If not, the melt of each test specimen should be known and there should be a representative number of couplers from each melt. |
| 1.8.1.2 | Each test specimen shall be selected at random from the batches and shall be representative of the production run.                                                                                                                                                                                                   |

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|                      | <p>1.8.2 <b>Testing</b></p> <p>1.8.2.1 The fatigue properties for each coupler size shall be established by a competent testing laboratory complying with the requirements Schedule 2 of the New works Requirements.</p> <p>1.8.2.2 Test specimens shall be tested in air under axial tensile loading using tapered grips and a suitable gripping medium.</p> <p>1.8.2.3 Testing shall be carried out under load control and stress shall be calculated using nominal cross-sectional area.</p> <p>1.8.2.4 Tests shall be performed for couplers for reinforcing bar diameters 25 millimetres, 32 millimetres, 40 millimetres on BS4449:2005 grade B500B or grade B500C.</p> <p>1.8.2.5 The number of load cycles per test shall be performed until failure.</p> <p>1.8.2.6 The frequency of testing shall be in the range 5 to 10 hertz.</p> <p>1.8.2.7 The samples of all diameters shall be tested at the following stress ranges (all newtons per square millimetre):</p> <table border="1" data-bbox="462 929 1348 1176"> <thead> <tr> <th>Stress Range</th> <th>Max Stress</th> <th>Min Stress</th> <th>Mean Stress</th> </tr> </thead> <tbody> <tr> <td>400</td> <td>450</td> <td>50</td> <td>250</td> </tr> <tr> <td>300</td> <td>400</td> <td>100</td> <td>250</td> </tr> <tr> <td>200</td> <td>350</td> <td>150</td> <td>250</td> </tr> <tr> <td>160</td> <td>360</td> <td>200</td> <td>280</td> </tr> </tbody> </table> <p>1.8.2.8 The S-N curves shall be presented as straight lines, using a log-log scale of stress versus number of cycles to failure. They shall be based upon standard statistical regression analysis methods and give the 97.5 per cent confidence of survival.</p> <p>1.8.3 Frequency of testing</p> <p>1.8.3.1 Three samples shall be tested for each bar / coupler size and stress range; giving a total number of 12 sets of tests per bar / coupler size.</p> | Stress Range | Max Stress  | Min Stress | Mean Stress | 400 | 450 | 50 | 250 | 300 | 400 | 100 | 250 | 200 | 350 | 150 | 250 | 160 | 360 | 200 | 280 |

|               |          |                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               |          | shall not add antifreeze agents or any other chemicals.                                                                                                                                                                                                                                                                                                                                       |
| <b>1773AR</b> | <b>1</b> | <b>Removal of Concrete in Areas to be Repaired</b>                                                                                                                                                                                                                                                                                                                                            |
|               | 1.1      | Requirements for the Removal of Concrete                                                                                                                                                                                                                                                                                                                                                      |
|               | 1.1.1    | The Company shall cut out and remove concrete from areas specifically identified following inspection and testing.                                                                                                                                                                                                                                                                            |
|               | 1.1.2    | Concrete shall be removed from the area until sound concrete is reached. Where reinforcement becomes exposed concrete shall be removed for a minimum distance of 25 millimetres beyond the rear face of the reinforcement. Where corroded reinforcement is identified the area of concrete removed shall be extended to expose 100 millimetres of uncorroded reinforcement in all directions. |
|               | 1.1.3    | Before cutting out the Company shall determine the position and depth of the reinforcement. The perimeter of the concrete to be removed shall be saw cut perpendicularly to the face of the concrete to a depth of not less than 15 millimetres or to within 10 millimetres of the reinforcement, whichever shall be the lesser.                                                              |
|               | 1.1.4    | At the upper limits of repairs to be made using repair concrete, sloping cuts may be used to avoid the entrapment of air when the concrete is poured.                                                                                                                                                                                                                                         |
|               | 1.1.5    | The saw cut edges shall be abraded by grit blasting or equivalent methods.                                                                                                                                                                                                                                                                                                                    |
|               | 1.1.6    | The concrete shall be removed by the use of suitable hand or mechanical tools or high pressure water jetting. Removal of concrete by water jetting shall be carried out by firms who are registered members of the Association of High Pressure Water Jetting Companies.                                                                                                                      |
|               | 1.1.7    | Where concrete is removed by high pressure water jetting a lightweight electric or pneumatic chipping hammer may be used for final trimming of the area broken out.                                                                                                                                                                                                                           |
|               | 1.1.8    | Overbreak of concrete shall be made good using a concrete repair system selected from Clause 1775AR.                                                                                                                                                                                                                                                                                          |
|               | 1.1.9    | Reinforcement damaged during concrete removal shall be made good. Existing reinforcement which has corroded or is otherwise damaged shall be removed and additional steel reinforcement shall be lapped or welded onto the existing reinforcement. All such welding shall be in accordance with Clause 1717. All loose reinforcement shall be securely tied with stainless steel tying wire.  |
|               | 1.1.10   | The Site shall be kept free of debris or standing water arising from the high pressure water jetting activities.                                                                                                                                                                                                                                                                              |
|               | 1.1.11   | On completion of removal of concrete all concrete surfaces and exposed reinforcement which shall be in contact with repair materials shall be prepared in accordance with Clause 1774AR.                                                                                                                                                                                                      |
| <b>1774AR</b> | <b>1</b> | <b>Surface Preparation</b>                                                                                                                                                                                                                                                                                                                                                                    |
|               | 1.1      | General Requirements                                                                                                                                                                                                                                                                                                                                                                          |

Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <p>1.1.1 Blast cleaning - The Company shall ensure that the grade and particle shape of abrasives is adequate to achieve the appropriate standard of cleanliness. Non-metallic abrasives shall not be recycled</p> <p>1.1.2 Water for cleaning - Only clean cold water which complies with the requirements of BS EN 1008 shall be used for cleaning and rinsing.</p> <p>1.1.3 Preparation of Surfaces of Reinforcement</p> <p style="padding-left: 40px;">a) Standard - Bright steel: Removal of all detrimental contamination and corrosion products to produce a generally bright appearance overall. The surfaces shall be free of embedded abrasive particles and corrosion products when viewed through a X10 illuminated magnifying glass.</p> <p>1.2 Method</p> <p>1.2.1 <b>Blast cleaning using dry air / abrasive system, or</b></p> <p>1.2.2 Wet blast cleaning using a low pressure air / water / abrasive system. The equipment shall not allow the air / water pressure to exceed 14 bar and shall incorporate a metering device to allow the abrasive quantity introduced to be adjusted from 0 to 14 bar.</p> <p>1.2.3 Within an hour of cleaning the treated reinforcement shall be pressure washed with clean water.</p> <p>1.3 Preparation of Surfaces of Concrete</p> <p>1.3.1 Standard - Concrete surfaces shall be clean and dry and free of cement laitance contaminants and loose friable material. The surface shall be wetted one hour before repair concrete is applied. There shall be no standing water. The surface shall be such that repair concrete shall flow freely into all voids and be in intimate contact with the existing concrete.</p> <p>1.4 Method</p> <p>1.4.1 <b>High Pressure Water Jet</b></p> <p>1.4.1.1 The surface profile after cutting out shall be irregular with aggregate particles projecting above the surrounding concrete matrix.</p> <p>1.4.2 <b>Hand or Mechanical Tools</b></p> <p>1.4.2.1 All concrete surfaces to receive repair materials exposed by percussive methods using hand or mechanical tools shall be prepared by grit blasting or high pressure water jetting to remove all fractured or "bruised" concrete surfaces to expose sound aggregate particles.</p> <p>1.5 Procedure Trials</p> <p>1.5.1 The Company shall remove, cut back and prepare the surface of an area of one square metre of concrete to be repaired as a trial of the methods proposed for carrying out the work and obtain a photographic record for inspection by the Contracting Authority.</p> |
| <p><b>1775AR</b></p> | <p><b>1 Concrete Repairs</b></p> <p>1.1 General</p> <p>1.1.1 Concrete repairs shall be carried out using either normal flow concrete,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <p>proprietary repair mortar, high-flow repair concrete, proprietary sprayed concrete, or a proprietary repair system proposed by the Company and subject to consent in writing by the Contracting Authority.</p>                                                                                                                                                                                                                  |
| 1.1.1.1 | Crack repairs carried out by a resin injection system shall be proposed by the Company and subject to consent in writing by the Contracting Authority.                                                                                                                                                                                                                                                                             |
| 1.1.2   | Proprietary repair materials and systems shall have an Agrément Board Roads and Bridges Certificate registered with the Department for Transport / Highways Agency.                                                                                                                                                                                                                                                                |
| 1.1.3   | Proprietary repair mortars shall be used for repair areas less than or equal to 1 metre squared or repair depths less than or equal to 30 millimetres deep. Normal flow concrete or high flow concrete or sprayed concrete shall be used for repair areas greater than 1 metre squared or greater than 30 millimetres deep or as otherwise proposed by the Company and subject to consent in writing by the Contracting Authority. |
| 1.2     | Repairs Using Normal Flow Concrete                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1.2.1   | Repair concrete shall be a designed mix for special structural concrete as defined in Clauses 1701 and 1705 of the Specification.                                                                                                                                                                                                                                                                                                  |
| 1.2.2   | Cement content shall be not less than 400 kilograms per cubic metre or more than 550 kilograms per cubic metre.                                                                                                                                                                                                                                                                                                                    |
| 1.2.3   | Maximum aggregate size shall be 10 millimetres.                                                                                                                                                                                                                                                                                                                                                                                    |
| 1.2.4   | The free water / cement ratio shall not be greater than 0.4.                                                                                                                                                                                                                                                                                                                                                                       |
| 1.2.5   | The minimum 28 day compressive strength shall be 40 newtons per square millimetre.                                                                                                                                                                                                                                                                                                                                                 |
| 1.2.6   | Alkali – silica reaction shall be controlled as specified in Clause 1704.5.                                                                                                                                                                                                                                                                                                                                                        |
| 1.3     | Repairs Using Proprietary Repair Mortar                                                                                                                                                                                                                                                                                                                                                                                            |
| 1.3.1   | Prebatched polymer modified cementitious mortars incorporating a shrinkage reduction agent shall be used.                                                                                                                                                                                                                                                                                                                          |
| 1.3.2   | Mortars for hand screeding of surfaces to be waterproofed shall be sand/cement mortar containing styrene acrylate or styrene butadiene polymer bonding mixture.                                                                                                                                                                                                                                                                    |
| 1.3.3   | The free water / cement ratio shall be not greater than 0.4.                                                                                                                                                                                                                                                                                                                                                                       |
| 1.3.4   | The maximum aggregate grain size in the mortar shall be suitable for the depths of repair required.                                                                                                                                                                                                                                                                                                                                |
| 1.3.5   | Water required to mix repair mortars shall comply with the requirements of BS EN 1008.                                                                                                                                                                                                                                                                                                                                             |
| 1.3.6   | The cement content shall be not less than 400 kilograms per cubic metre or more than 550 kilograms per cubic metre.                                                                                                                                                                                                                                                                                                                |
| 1.3.7   | The total chloride ion content of the materials for repairs to prestressed or heat cured concrete shall not exceed 0.1 per cent of the weight of cement. Calcium chloride or admixtures containing chloride salts shall not be used.                                                                                                                                                                                               |
| 1.3.8   | The minimum 28 day strength of the mortar shall be 40 newtons per                                                                                                                                                                                                                                                                                                                                                                  |

Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <p>square millimetre. Alkali-silica reaction shall be controlled as specified in Clause 1704.5 of the Specification.</p>                                                                                                                                                                                                                                                                                                                                           |
| 1.4     | <p>Delivery and Storage of Material</p>                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1.4.1   | <p>The Company shall supply with each batch of the material delivered to the New Works Site certificates furnished by the supplier stating:</p> <ul style="list-style-type: none"> <li>a) the polymer used;</li> <li>b) evidence that the chloride contents are less than specified in sub-Clause 1.3.7 above;</li> <li>c) the content of sodium oxide equivalent in the mortar;</li> <li>d) Maximum shelf life; and</li> <li>e) Handling arrangements.</li> </ul> |
| 1.4.2   | <p>The material shall be stored in a dry environment free from extremes of cold and heat and any specific storage requirements of the manufacturers; and</p>                                                                                                                                                                                                                                                                                                       |
| 1.4.3   | <p>The materials shall not be removed from the store for use until immediately prior to mixing</p>                                                                                                                                                                                                                                                                                                                                                                 |
| 1.5     | <p>Placing Repair Mortar</p>                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1.5.1   | <p>The repair shall be built up in layers in accordance with the repair mortar manufacturer’s written instructions. The surface of each layer except the final layer shall be scored to provide a key for the next layer.</p>                                                                                                                                                                                                                                      |
| 1.5.2   | <p>The repair mortar shall be suitable for the purpose intended i.e. for soffits or vertical surfaces as appropriate.</p>                                                                                                                                                                                                                                                                                                                                          |
| 1.5.3   | <p>Repair mortar shall not be applied when the temperature of the surface to be repaired falls below five degrees Celsius.</p>                                                                                                                                                                                                                                                                                                                                     |
| 1.5.4   | <p>The material shall be incorporated within one hour of mixing or such lesser period as stated in writing by the manufacturer.</p>                                                                                                                                                                                                                                                                                                                                |
| 1.5.5   | <p>Repair mortar shall be cured in accordance with sub-Clause 1710.5 and the manufacturer’s written instructions. During the curing period the temperatures of the repair mortar shall be maintained at or above five degrees Celsius by artificial means if necessary.</p>                                                                                                                                                                                        |
| 1.6     | <p>Surface Finish to Repair Mortar</p>                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1.6.1   | <p>Repair mortar shall be float finished to produce a dense smooth uniform surface free from float marks to the specified line and level.</p>                                                                                                                                                                                                                                                                                                                      |
| 1.7     | <p>Repairs Using High-Flow Repair Concrete</p>                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 1.7.2.4 | The material shall be stored in a dry environment free from extremes of cold and heat.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1.7.2.5 | Material shall not be older than three months or a lesser period specified by the formulator when used in the New Works.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1.7.2.6 | The materials shall not be removed from the store for use in the New Works until immediately prior to mixing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1.7.3   | <b>Formwork Site Mixing Placing and Curing</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1.7.3.1 | Formwork shall be Class F3 to sub-Clause 1708.4 with the perimeter of the repair well sealed to prevent grout loss. Release agents shall be compatible with proposed surface treatments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1.7.3.2 | Mixing in a forced action paddle mixer and placing shall be carried out strictly in accordance with the formulator’s written instructions together with the following additional conditions: <ul style="list-style-type: none"> <li>a) The free water cement ratio shall not exceed 0.4. The water content shall be determined during approval tests and maintained for batch tests works tests and in the New Works within ± 2 per cent of the agreed content.</li> <li>b) No extra water shall be added after the original mixing.</li> <li>c) The material shall be incorporated in the New Works within 20 minutes of completion of mixing or such lesser period as stated by the formulator. The concrete shall be continuously agitated after the mixing and before placing.</li> <li>d) The material shall not be mixed or placed in the New Works at ambient temperatures lower than five degrees Celsius or where the surface temperature of the concrete in the repair void is less than five degrees Celsius.</li> <li>e) The concrete when placed shall have a temperature of not less than five degrees Celsius and not more than 20 degrees Celsius.</li> <li>f) The surface temperature of the concrete shall be maintained at not less than five degrees Celsius until the concrete reaches a strength of 10 newtons per square millimetre as determined by tests on cubes cured under similar conditions to the structural concrete. Heat shall not be applied direct to any concrete.</li> </ul> |

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>g) Repair concrete shall not be placed against other concrete which has been in position for more than 30 minutes unless a construction joint is formed in accordance with Clause 1710. In addition the joint surface shall be saturated for a minimum of 2 hours before concrete is placed against it. When repair concrete has been in place for four hours no further concrete shall be placed against it for a further 20 hours.</p> <p>h) Vibration shall not be used. The side shutters shall be tapped lightly with a hammer to expel surface air voids.</p> <p>1.7.3.3 Immediately after placing and for 14 days thereafter concrete shall be protected against harmful effects of weather including rain, rapid temperature changes and frost and from drying out. Impregnation may be carried out in accordance with the manufacturer’s written instructions and not before 14 days as described in Clause 1709. Curing membranes shall not be used.</p> <p>1.7.3.4 When the mix proportions have been determined no variations shall be made in the manufacture supply mix proportions or method of mixing of the material.</p> <p>1.7.4 <b>Approval Tests</b></p> <p>1.7.4.1 Before New Works commence all properties of the proposed high-flow repair concrete shall be demonstrated by the Company and the formulator’s representative by carrying out the tests specified below in an UKAS accredited laboratory. Records shall be maintained of all tests in accordance with the procedures in the Quality Plan.</p> <p>1.7.4.2 The composition of the high flow concrete including the source of water the mix proportions and the method of mixing shall be the same as that proposed for use in the New Works. The composition shall not be varied throughout the course of the tests and the material shall be obtained from the same batch.</p> <p>1.7.4.3 The tests fall into two categories: flowability and compressive strength.</p> <p>1.7.4.4 The flowability tests shall demonstrate:</p> <p>a) flow characteristics in a trough at five degrees Celsius and 20 degrees Celsius as specified in Note 1 below; and</p> <p>b) flow characteristics in a simulated soffit repair at five degrees Celsius and 20 degrees Celsius as specified in Note 2 below.</p> <p>Note 1: The flow characteristics of the concrete in a trough shall be assessed. For each test the concrete and trough shall be at the specified temperature. The funnel of the apparatus shall be fitted with a rubber bung and charged with 6 litres of concrete. On release of the bung the concrete shall flow along the trough and the length of the flow along the trough shall be measured. A test shall consist of three readings the flow requirements shall be deemed to be satisfied if none of the readings is below 750 millimetres in 30 seconds without signs of segregation or bleeding.</p> <p>Note 2: The flow characteristics of the concrete in a simulated soffit repair shall be tested in accordance with BD27. For each</p> |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|         | <p>test the concrete and apparatus shall be at the specified temperature. The concrete shall be poured in one operation into the supply tube until the level of the concrete has reached 100 millimetres above the underside of the top plate. After the concrete has set the specimen shall be removed from the apparatus and sawn into two parts and the sawn concrete surfaces shall be examined. The concrete shall be homogeneous free from excessive air holes voids segregation and other defects and shall completely fill the simulated repair.</p> |
| 1.7.5   | <b>Compressive Strength Tests</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1.7.5.1 | Compressive strength tests shall be carried out to determine the compressive strength of the concrete at five degrees Celsius and 20 degrees Celsius. These shall conform to the requirements in BS 8500-2:2006.                                                                                                                                                                                                                                                                                                                                             |
| 1.7.5.2 | Test cubes shall be made in 100 millimetres metal moulds to BS EN 12390-1:2000. The moulds shall be carefully filled by pouring concrete through a funnel to produce void free specimens. There shall be no compaction. The cubes shall be cured and tested in accordance with BS EN 12390-2:2000.                                                                                                                                                                                                                                                           |
| 1.7.5.3 | The minimum compressive strength shall be established using a set of three cubes. The requirement shall be satisfied if none of the compressive strengths obtained is lower than the specified value and the difference between the highest and lowest values is not more than 20% of the average. Identity testing where required shall be carried out in accordance with Clause 1707.                                                                                                                                                                      |
| 1.7.6   | <b>Batch Acceptance Test</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1.7.6.1 | Each batch of material delivered to the Sites shall be tested as follows: <ul style="list-style-type: none"> <li>a) the material shall be taken at random from one or more containers from the same batch;</li> <li>b) flow through tests shall be carried out as specified in Note 1 of sub-Clause 1.7.4.4 above at 20 degrees Celsius; and</li> <li>c) Compressive strength tests shall be carried out as specified in sub-Clause 1.7.5 above at 20 degrees Celsius.</li> </ul>                                                                            |
| 1.7.7   | <b>Site Tests</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1.7.7.1 | Site tests shall be carried out to monitor: <ul style="list-style-type: none"> <li>a) flowability; and</li> <li>b) compressive strength.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                          |
| 1.7.7.2 | The flowability of a sample of fresh concrete shall be determined in a trough as specified in sub-Clause 1.7.4.4 Note 1.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1.7.7.3 | The gain in strength of the repair concrete shall be monitored by testing cubes cured alongside the repaired areas at ambient temperature.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1.7.7.4 | For each days production of repair concrete six 100 millimetres cubes shall be made in accordance with sub-Clause 1.7.5 above. The cubes shall be cured for 24 hours in the moulds with the top surfaces covered by polythene sheets. After 24 hours the cubes shall be stripped and                                                                                                                                                                                                                                                                         |

Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

placed in polythene bags which shall be sealed. The cubes shall continue to be stored alongside the repaired areas throughout the curing period until required for testing. The cubes shall be crushed at times determined by the Company but at least two cubes shall be retained to be tested at 28 days.

1.8 Repairs Using Proprietary Sprayed Concrete

1.8.1 **Materials**

1.8.1.1 The proprietary material shall be pre-weighed and pre-mixed at a location off the site of the New Works.

1.8.1.2 Cement shall comply with Clause 1702.

1.8.1.3 Alkali-silica reaction shall be controlled as specified in Clause 1704.

1.8.1.4 The total chloride ion content of the materials shall not exceed 0.1% of the weight of cement. Any chloride or admixtures containing chloride salts as defined by sub-Clause 1702.2 shall not be used.

1.8.1.5 Aggregate shall be well graded with the maximum size not exceeding 3 millimetres and shall comply with sub-Clause 1702.2.

1.8.1.6 Combinations and additions may comprise pulverised fuel ash ground granulated blast furnace slag microsilica and plasticisers. Calcium chloride or admixtures containing chloride salts and expansion agents shall not be used.

1.8.1.7 The maximum sulphate content shall comply with sub-Clause 1704.6.

1.8.1.8 Material shall be capable of being applied to a thickness of 100 millimetres without the requirement for additional mesh reinforcement or fibres. Once placed it shall be capable of being profiled and trowel finished (to the equivalent of formed Class F3) without detrimental effects.

1.8.2 **Performance Characteristics**

1.8.2.1 The proprietary material shall have performance characteristics as detailed in Table 17/71 which are to be verified by an independent testing authority.

**TABLE 17/71: Performance Characteristics**

| Test                                       | Performance                                    |
|--------------------------------------------|------------------------------------------------|
| Adhesion to concrete substrate             | greater than 2.0 newtons per square millimetre |
| Characteristic strength of cores (28 days) | 40 newtons per square millimetre               |
| Tensile splitting strength (28 days)       | greater than 2.4 newtons per square millimetre |
| Static Modulus of elasticity               | 27000 ± 3000 newtons per square millimetre     |
| Shrinkage                                  | less than 0.002 per cent                       |

| <p>1.8.3.4 The material shall be stored in a dry environment free from extremes of cold and heat.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                            |  |
| <p>1.8.3.5 Material shall not be older than three months or lesser period specified by the formulator when incorporated in the New Works.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                            |  |
| <p>1.8.3.6 The materials shall not be removed from the store for use in the New Works until immediately prior to mixing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                            |  |
| <p>1.8.4 <b>Trial Mixes</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                            |  |
| <p>1.8.4.1 Practical tests shall be carried out on the Site by constructing test panels to confirm the suitability of the mix for the New Works. In these tests the type of Constructional Plant used for mixing and placing and the finished face to the panel shall be similar in all respects to those intended for use in the New Works.</p>                                                                                                                                                                                                                                          |                                                            |  |
| <p>1.8.5 <b>Procedure Trials</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                            |  |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>1.8.5.1 Before work commences on the site of the New Works procedure trials shall be carried out to pre-qualify the nozzlemen proposed for use on the New Works. Nozzlemen who have not been pre-qualified shall not be used.</p> <p>1.8.5.2 Each nozzleman shall carry out procedure trial panels. The procedure trial panels shall have minimum dimensions of 750 millimetres x 750 millimetres x 100 millimetres deep and shall be made of plywood with 45 degrees sloped edge to permit rebound to escape.</p> <p>1.8.5.3 One half of each procedure trial panel shall contain reinforcement representative of the size and spacing of the work. The second half of the procedure trial panel shall contain no reinforcement (with the exception of fibre reinforcement) to allow for the extraction of cores for testing in accordance with sub Clause 1.17.2 of this Clause.</p> <p>1.8.5.4 One procedure trial panel shall be New Works Operations using each proposed mixture proportion at each proposed orientation i.e. horizontal overhead and the like.</p> <p>1.8.5.5 A minimum of three 100 millimetre diameter cores shall be extracted from the location of intersecting reinforcing steel to check the adequacy of consolidation of the sprayed concrete around the reinforcement.</p> <p>1.8.5.6 No sprayed concrete shall be carried out on the New Works until the procedure trial testing requirements have been met.</p> <p>1.9 Surface Preparation for Sprayed Concrete</p> <p>1.9.1 Sound surfaces which are to receive sprayed concrete shall be thoroughly cleaned and roughened by grit blasting or high pressure water jetting.</p> <p>1.9.2 Grit blasted areas shall have sprayed concrete applied within 48 hours or shall be reblasted.</p> <p>1.9.3 Immediately prior to spray concreting all the surfaces to be sprayed shall be thoroughly cleaned and wetted with a strong blast of oil-free air and water to comply with the requirements of BS EN 1008.</p> <p>1.10 Outline Definition</p> <p>1.10.1 The outline of the finished sprayed concrete shall be defined by screed boards guide wires or other means proposed by the Company and consented to in writing by the Contracting Authority.</p> <p>1.10.2 Guide wires shall be installed tight and true to line and in such a manner that they may be easily tightened.</p> <p>1.11 Mixing Sprayed Concrete</p> <p>1.11.1 Sprayed concrete shall be mixed in a batch type mixer complying with the requirements of BS1305 except that the water shall be delivered direct to the nozzle. The delivery equipment shall be capable of delivering a continuous even stream of uniformly mixed material to the nozzle. Water supply at the nozzle shall be maintained at a uniform pressure sufficient to ensure adequate hydration at all times. The delivery equipment and nozzle shall be thoroughly cleaned and inspected at the end of each day and parts replaced as required.</p> |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|        |                                                                                                                                                                                                                                                                                                                                                                              |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.11.2 | The temperature of water and cement when added to the mix shall not exceed 60 degrees Celsius and 65 degrees Celsius respectively.                                                                                                                                                                                                                                           |
| 1.11.3 | Water used in sprayed concrete shall comply with the requirements of BS EN 1008.                                                                                                                                                                                                                                                                                             |
| 1.12   | Reinforcement                                                                                                                                                                                                                                                                                                                                                                |
| 1.12.1 | Welded wire mesh fabric reinforcement shall be fixed to prepared surfaces and shall be carefully bent to follow the shape of the members and held in position by anchors spaced at not less than two per square metre. The fabric shall be spaced at not less than 25 millimetres from the finished surface of the concrete.                                                 |
| 1.13   | Transport and Placing Sprayed Concrete                                                                                                                                                                                                                                                                                                                                       |
| 1.13.1 | No concrete shall be sprayed in air temperatures less than five degrees Celsius or onto a surface temperature less than five degrees Celsius. Surfaces shall be free from standing water.                                                                                                                                                                                    |
| 1.13.2 | Sprayed concrete shall emerge from the nozzle in a steady uninterrupted flow and an uninterrupted supply of compressed air shall be provided to maintain adequate nozzle velocity. Should the flow become intermittent the nozzle shall be directed away from the work until the flow again becomes uniform.                                                                 |
| 1.13.3 | Sprayed concrete shall be applied under sufficient pressure so as to give a dense and homogeneous covering to the surface in one or more layers of a thickness compatible with the mix Design constituents' position of reinforcement and plane of application to ensure the placed concrete does not slump or sag.                                                          |
| 1.13.4 | Adequate precautions shall be taken to ensure that sprayed concrete rebound is not incorporated in the finished work and that any previously deposited hardened rebound which may prevent a proper bond or encasement is removed from reinforcement.                                                                                                                         |
| 1.13.5 | Adequate protection shall be given to the nozzle and application surface during high winds.                                                                                                                                                                                                                                                                                  |
| 1.13.6 | The final coat shall be hand screeded to a Class U3 finish in accordance with sub-Clause 1708.4                                                                                                                                                                                                                                                                              |
| 1.14   | Fibre Reinforced Sprayed Concrete                                                                                                                                                                                                                                                                                                                                            |
| 1.14.1 | The weight of steel and / or composite fibres shall not exceed five per cent by weight of the combined weight of cement and aggregate. Fibres shall be added to the mix in such a manner that the fibres are evenly distributed and not bent. Procedure trials shall be undertaken to demonstrate that the proposed methods can achieve the requirements of this sub-Clause. |
| 1.14.2 | Unless otherwise stated elsewhere in this Agreement a final 15 millimetres thick coat of unreinforced sprayed concrete shall be applied over the whole exposed surface to cover exposed fibres.                                                                                                                                                                              |
| 1.14.3 | The gun and nozzle shall be electrically earthed.                                                                                                                                                                                                                                                                                                                            |
| 1.15   | Construction Joints                                                                                                                                                                                                                                                                                                                                                          |
| 1.15.1 | Construction joints in sprayed concrete shall be tapered at                                                                                                                                                                                                                                                                                                                  |

## Part 4 Specification

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | <p>approximately 30 degrees or cut back square to the reinforcement and then tapered at 30 degrees. The construction joint shall be thoroughly cleaned and all laitance and loose material removed and the surface wetted using a strong blast of air and water prior to the placement of adjacent sprayed concrete.</p>                                                                                                                                                                                                                                                           |
| 1.16     | <b>Curing of Sprayed Concrete</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1.16.1   | Freshly sprayed concrete shall be protected from rain or water until the surface is sufficiently hard to resist damage.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1.16.2   | Immediately after placing and for 14 days thereafter sprayed concrete shall be protected against harmful effects of weather including rain rapid temperature changes and frost and from drying out. Curing membranes shall not be used.                                                                                                                                                                                                                                                                                                                                            |
| 1.16.3   | Impregnation in accordance with Clause 1709 may be carried out after 14 days.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1.17     | <b>Production Testing of Sprayed Concrete</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1.17.1   | One production test panel shall be carried out for each nozzle orientation for each day of sprayed concrete production or every five cubic metres of sprayed concrete whichever is the lesser.                                                                                                                                                                                                                                                                                                                                                                                     |
| 1.17.2   | Sprayed concrete production test panels shall be made with dimensions 450 millimetres x 450 millimetres x 100 millimetres thick with 45 degrees sloped edge forms to permit escape of rebound. Production test panels shall contain no reinforcement (other than fibre reinforcement). The production test panels shall be marked cured cored and tested in compression in accordance with the appropriate parts of BS EN 12350 and BS EN 12390. They shall be tested in a UKAS accredited laboratory. Records shall be maintained of all tests and stored at a suitable location. |
| 1.17.3   | Routine tests shall be carried out by the Company on the finished sprayed concrete. These shall consist of taking 25 millimetres or 100 millimetres dia. cores from the finished sprayed concrete and testing them in the same manner as cores taken from the test panels or by carrying out non-destructive tests by means of a 'Schmidt' hammer or 'Windsor Probe' to determine compressive strength and testing for bond by the use of a hand hammer.                                                                                                                           |
| 1.18     | <b>Resin Injection Repairs</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 1.18.1   | <b>Preparation of Surfaces Around Cracks</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1.18.1.1 | The concrete surface at least 50 millimetres either side of the crack shall be dry blast cleaned to a sound surface free from dirt moss salt staining and loose concrete. The full extent of the crack shall be found and the cleaned area shall extend 50 millimetres beyond the end of the crack or until the crack becomes too narrow to warrant resin injection.                                                                                                                                                                                                               |
| 1.18.1.2 | Where algae or other bacterial growth emanates from the crack it shall be removed by scrubbing with bactericide and rinsing with clean water. Health and safety precautions appropriate to the bactericide cleaning agent used shall be adopted including those recommended in writing by the manufacturers. Measures shall be taken to ensure that any adjacent water course is not contaminated and that run-off is collected and                                                                                                                                                |

**Appendix 0/1: Additional, Substitute and Cancelled Clauses, Tables and Figures Specific to This Agreement**

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>disposed of in a safe manner.</p> <p><b>1.18.2 Moisture in Cracks</b></p> <p>1.18.2.1 Where the moisture level in the crack to be resin injected is unacceptably high the crack shall be blown through with dry hot air starting at the top of the crack. A temporary crack sealant shall be applied immediately after blowing through and the resin shall be injected into the crack immediately the necessary preparations are complete.</p> <p>1.18.2.2 If for whatever reason the crack becomes damp before it is resin injected no further work shall be permitted until the temporary crack sealant is removed and the crack blown through again with dry hot air</p> <p>1.18.2.3 The temperature of the hot air shall be sufficient to dry the full depth of the crack and shall not exceed the maximum temperature specified by the equipment manufacturer.</p> <p><b>1.18.3 Resin Injection</b></p> <p>1.18.3.1 The resin to be used shall be either polyester or epoxy based and shall be mixed and injected in accordance with the manufacturer's written specification. Resin shall not be injected when the air temperature or the surface temperature concrete to be repaired is less than five degrees Celsius.</p> <p>1.18.3.2 The spacing of the nozzle positions shall be equal to the depth of the crack and shall not in any case be less than 250 millimetres.</p> <p>1.18.3.3 Injecting shall start at the bottom of the crack and work shall proceed upwards in a continuous operation throughout. Resin shall be seen extruding from the crack at the next nozzle position before the current nozzle location is locked off.</p> <p>1.18.3.4 The injected crack shall be left undisturbed for a period of at least 24 hours to allow the resin to harden.</p> <p>1.18.3.5 When the resins are sufficiently cured the cracks and any resin spillages shall be cleaned from the face of the concrete.</p> <p><b>1.18.4 Proving Tests</b></p> <p>1.18.4.1 When the resin has set, two 20 millimetres diameter proving cores shall be taken to the full depth of the crack. These shall be filled with either the resin used for injecting or with a suitable filler of a compatible thixotropic resin.</p> <p><b>1.19 Sealing of Cracks in Concrete Bridge Decks</b></p> <p>1.19.1 The preparation of surfaces around cracks and the measures to deal with algae or other growth in cracks shall be as described in sub-Clause 1.18 above.</p> <p><b>1.19.2 Application of Sealer</b></p> <p>1.19.2.1 The sealing resin shall be a low viscosity polyester epoxy or acrylic polymer which shall be compatible with any proposed waterproofing system.</p> <p>1.19.2.2 The material shall be applied by pouring through a fine nozzle directly into the crack or into pre-formed dams.</p> |
