| <b>Scotland Gas Networks Ltd (SGN)</b>                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |         |                                                                          |                                                                               |                                                    |                                    |                                                                                    |
| (SGN Ref. C12N0750150:3 of 6 Rev C)<br>P246600/2700/SGN/ 004 | Install 250mm diameter medium pressure PE pipe, approx. length 132m, to cross realigned A90 (at approximate chainage 300) and at sufficient depth to allow existing A90 and existing B977 to be grubbed up (for landscape planting). Note subject to finished road levels / final landscaping requirements suiting the existing gas pipe and, with SGN's agreement, this diversion may be omitted. Alternatively (if cover depth is insufficient) a reinforced concrete protection slab may be provided out with the realigned A90. |         | Review diversion design.                                                 | Review diversion design.                                                      | – 1 <sup>st</sup> Aug 2014<br><br>(For Servitudes) | (including material order period)  | Note – SGN advise that works shall not be concurrent with any other SGN diversion. |
|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |         |                                                                          | Obtain necessary servitudes (if required)                                     |                                                    |                                    |                                                                                    |

**Table 1/16B Notes**

\* Group classification:

- A Advance Statutory Undertakers' Works.
- B Statutory Undertakers' Works required after the Commencement Date.
- C Statutory Undertakers' Works required after the Commencement Date for which advance order of materials and wayleave negotiation may begin prior to the Commencement Date subject to agreement with the Contracting Authority.

\*\* Works Period Estimate is total of individual stages which may not be continuous.

## Appendix 1/17: Traffic Safety and Management

### 1 General Requirements

- 1.1 All traffic management shall be carried out in a manner which avoids causing traffic to divert on to alternative routes, minimises the impact on the local community and minimises delays and disruptions to existing traffic. The Company shall demonstrate to the satisfaction of those consulted that his traffic management proposals have been developed such that they include all necessary measures to minimise delays, disruptions and diversions to traffic. This shall include traffic modelling measures as appropriate using micro-simulation measures and the like. Consultation Certificates shall be submitted in accordance with the Certification Procedure.
- 1.2 Subject to the other requirements of this Agreement the Company shall comply at all times with the requirements of Chapter 8 of the Traffic Signs Manual 2009 and any relevant Transport Scotland Publication including those detailed in the DMRB.
- 1.3 The Company shall submit details of its proposed traffic management programme to the Contracting Authority at least 6 weeks before the date of the Effective Date. The programme shall identify the Temporary Traffic Management Scheme associated with each construction operation, and the duration of each phase of the programme. The scheme or schemes proposed shall take into account the information contained in this Appendix 1/17 and in Appendices 1/18, 1/19 and 1/20, and be consistent with any traffic management measures and construction operations being undertaken on adjacent roads.
- 1.4 All applications relating to Traffic Orders and/or authorisation of signs and/or signals shall be submitted to the Overseeing Organisation in writing and require the following notice:
- (i) amending or making temporary traffic orders - 12 weeks;
  - (ii) authorisation of temporary traffic signals - 7 weeks;
  - (iii) authorisation of non-prescribed signs – 5 week.
- 1.5 For advance notice of requirements for diversions, occupations and works occupations refer to Appendix 1/18.
- 1.6 The Company shall be responsible for the payment of all charges associated with the preparation and publication of all road related orders.
- 1.7 The Company shall undertake Stage 2 and Stage 3 Road Safety Audits and submit Road Safety Audit Certificates in respect of the Temporary Traffic Management Schemes in accordance with Part 1 of these New Works Requirements and the Certification Procedure.
- 1.8 Prior to any New Works starting on the New Works Site, the Company shall supply to the Contracting Authority details of traffic management proposals including, but not limited to, the following:
- (i) phasing of Works;
  - (ii) drawings showing traffic management layouts including, but not limited to, the following:
    - a) position of traffic signs, signals and cones;
    - b) width of lanes;
    - c) working areas;
    - d) safety zones;
    - e) details of temporary barriers for the protection of personnel;

**Appendix 1/17: Traffic Safety and Management**

- f) entry and exit points for site traffic;
  - g) provisions for emergency vehicles;
  - h) provisions for vehicle recovery;
  - i) provisions for wide loads; and
  - j) crossovers;
  - k) timing of Operations;
- 1.9 Sufficient information to demonstrate the objectives stated in paragraph 1 of this Appendix 1/17 can be achieved.
- 1.10 Names and telephone numbers of a minimum of 3 personnel who can be contacted by the Police and/or Contracting Authority, both during or out with the working day, and who shall be responsible for initiating whatever action shall reasonably be required in the event of an emergency. At least 2 of these contacts shall be available at any one time including periods when the New Works Site is closed.
- 1.11 The erection and removal of any traffic management installation, temporary diversion or Stage 3 Road Safety Audit shall not be carried out during the following hours and at any other time periods specified by the Contracting Authority:
- (i) Monday to Saturday – 06:00 to 09:30 hours inclusive and 16.00 (15.30 on Fridays) to 20:00 hours inclusive and on any local or national public holiday unless agreed in writing by the Relevant Authority, or on specific instructions from the Police.
- 1.12 Where the Company proposes to carry out the erection and removal of any traffic management installation, temporary diversion or Stage 3 Road Safety Audit on a Sunday, they shall give at least 7 days' notice of their proposals to the Police and shall not carry out such work without the approval of the Police.
- 1.13 Temporary crossovers on dual carriageways shall be designed for a minimum Design speed (85 percentile speed) of 70kph, or a minimum of 60kph where it can be demonstrated to the Contracting Authority that it is necessary in the interests of safety.
- 1.14 Where required by the Police, the Company shall supply, erect, maintain and remove on completion of the New Works, speed detection cameras for use by the Police at Temporary Traffic Management Schemes. The Police shall advise the Company as to the type and number of speed detection cameras required and also to the locations where the cameras should be deployed.
- 1.15 The Company shall maintain access across the New Works Site to the requirements and standards in Table 1/18 of Specification Appendix 1/18.
- 1.16 The Company shall ensure that while any Temporary Traffic Management Schemes are in force they are inspected and constantly monitored, any Defects identified being rectified immediately to the satisfaction of the Contracting Authority, the Police and the Relevant Authorities, as appropriate.
- 1.17 Frequency of inspections and maximum response times shall be as follows:

## Part 4: Specification

**Appendix 1/17: Traffic Safety and Management**

| <b>Location</b>            | <b>A90, A956, A93,<br/>A944, A96, A947,<br/>A975</b>      |                                      | <b>All other Roads</b>                                    |                                      |
|----------------------------|-----------------------------------------------------------|--------------------------------------|-----------------------------------------------------------|--------------------------------------|
|                            | <b>Frequency of<br/>inspection per 24<br/>hour period</b> | <b>Maximum<br/>Response<br/>Time</b> | <b>Frequency of<br/>inspection per 24<br/>hour period</b> | <b>Maximum<br/>Response<br/>Time</b> |
| <b>Advance<br/>Signing</b> | 4                                                         | 60 minutes                           | 2                                                         | 60 minutes                           |
| <b>Taper</b>               | 12                                                        | 15 minutes                           | 6                                                         | 15 minutes                           |
| <b>Lane Closure</b>        | 6                                                         | 30 minutes                           | 3                                                         | 30 minutes                           |
| <b>End Signing</b>         | 4                                                         | 60 minutes                           | 2                                                         | 60 minutes                           |

- 1.18 During the period when traffic restrictions are imposed on any road, the Company shall provide a minimum of two responsible and appropriately experienced operatives with an appropriate vehicle on a 24 hour day, 7 days a week basis whose sole responsibility shall be for the operational supervision of the Temporary Traffic Management Scheme.
- 1.19 The operatives shall be equipped with a mobile cellular telephone and mobile message pager to enable direct communication with them at all times. They shall be empowered to accept instructions from the Police and Roads Authority personnel with regard to the layout of the Temporary Traffic Management Scheme for which they are responsible.
- 1.20 The Company shall keep a daily record of all Defects in any Temporary Traffic Management Schemes, the times when they were identified or reported to him, the action taken to correct the defects, and the times when they were successfully corrected.
- 1.21 A copy of this record shall be forwarded to the Contracting Authority on the following day.
- 1.22 In the event of a traffic accident occurring in or adjacent to the New Works Site, the Company shall immediately contact the Police, Fire and Ambulance emergency services as appropriate and the Contracting Authority informing them of the following:
- (i) Location of the accident; and
  - (ii) The seriousness of the accident and whether any persons are trapped; whether the collision involves vehicles carrying inflammable, corrosive or hazardous substances; whether there is a possibility of ignition from leaking fuel or chemicals.
- 1.23 The Company shall attend such accidents in accordance with the requirements for recovery set out in Specification Appendix 1/20.
- 1.24 The Company shall remove any debris from the road to restore the road surface to a serviceable condition and shall then carry out any interim repairs or reinstatement that is required to reinstate the traffic control to its original layout. In any event complete reinstatement shall be made within 24 hours of the accident.
- 1.25 The Company shall ensure that sufficient personnel and a sufficient stock of spare signs and cones etc., are available at all times to make good damage to any traffic control layout.
- 1.26 When a contraflow is in operation an emergency lane shall, where practicable, be provided at all times for emergency vehicles. The emergency lane shall be kept free of materials, plant and stationary vehicles but it may be used for site access. The route shall be signed and delineated in order to ensure easy and free flow of any emergency vehicle.

---

**Appendix 1/17: Traffic Safety and Management**

- 1.27 The needs and safety of non-motorised users shall be considered at all times.
- 1.28 The Company shall comply with the advice of paragraph D3.10.4-6 and O3.13 of Chapter 8 of the Traffic Signs Manual 2009.
- 1.29 All non-motorised users' diversions shall have a hard surface and adequate drainage to prevent flooding or ponding. They shall be kept clean and free from all materials, Construction Plant and stationary vehicles.
- 1.30 Excessively long lengths should be avoided where possible to avoid 'shortcuts'. Care shall be taken to avoid crossing areas regularly traversed by heavy plant.
- 1.31 No at-grade vehicle crossings of the existing A90, A96 Trunk Roads, and A944 Side Road shall be permitted.
- 1.32 All diversions of pedestrian routes which are normally lit shall be provided with a standard of lighting at least equal to that of the original route.
- 1.33 Refer to the standards given in Table 1/18B of Appendix 1/18.
- 1.34 Works required to Pedestrian Underpasses shall be undertaken in such a way that the non-motorised access provided by adjacent Underpasses is not restricted at any one time.
- 1.35 All drivers including those delivering Constructional Plant and materials shall be given clear instructions regarding the traffic arrangements applicable at any particular time.
- 1.36 Provision for the passage of abnormal loads through the New Works shall be as follows:
- (i) The Company shall assist the Police in moving abnormal loads through the Works by modifying the signing/coning as necessary; and
  - (ii) Signs/cones so moved shall be replaced immediately the abnormal loads have passed through the New Works.
- 1.37 For the purposes of this Appendix, an abnormal load shall consist of any number of vehicles in convoy at any one time, requiring special measures to be taken in order to gain passage through the New Works.
- 1.38 Meetings between the Contracting Authority, the Company, Police and the Relevant Authorities, as appropriate, shall be arranged by the Company monthly throughout the duration of the New Works, at initiation or changes of traffic management layouts and at any other time deemed necessary by any of these parties.
- 1.39 The Company shall ensure that his traffic management proposals take account of events and public holidays which are likely to affect traffic flows.
- 1.40 The Company shall accommodate roadwork schemes adjacent to the New Works and shall consult and comply with the Relevant Authority in this respect.

**2 Monitoring of Roadworks**

- 2.1 The Company shall nominate two members of staff to liaise with Traffic Scotland at all times.
- 2.2 The Company shall inform the Traffic Scotland Control Centre (TSCC), Transport Scotland, AA Roadwatch, RAC, Radio Scotland, local radio, local press, North East Management Unit, Aberdeen City Council, Aberdeenshire Council and the emergency services at least two weeks in advance of any planned major changes to the traffic management layouts, including any plans to reduce the number of lanes in accordance with paragraph 5.2.

## Appendix 1/17: Traffic Safety and Management

- 2.3 In accordance with Appendix 1/24 the Company shall within his method statements for traffic management include procedures to inform the motoring public of delays and queues on the approaches to and within the New Works Site.
- 2.4 The following organisations shall be informed of the frequencies indicated in the reporting frequencies section of paragraph 3.0 below:
- (i) Traffic Scotland Control Centre;
  - (ii) AA Roadwatch;
  - (iii) Radio Scotland;
  - (iv) Local Radio Networks;
  - (v) Traffic Link; and
  - (vi) any other organisations as specified by the Contracting Authority
- 2.5 Traffic queues shall be monitored at all times during periods when Temporary Traffic management Systems are in operation for the duration of this Agreement.
- 2.6 Traffic queues shall be measured by means of time delay.
- 2.7 Queue lengths measured as being less than eight minutes shall be defined as representing “no substantial delay”.
- 2.8 Substantial delay queue lengths shall be quoted in the following bands;
- | <b>Measured Delay</b>          | <b>Quoted Delay</b>  |
|--------------------------------|----------------------|
| Up to 8 minutes                | No substantial delay |
| Between 8 and 12 minutes       | 10 minute delay      |
| Between 13 and 17 minutes      | 15 minute delay      |
| Between 18 and 22 minutes      | 20 minute delay      |
| Subsequent 5 minute time bands | add 5 minutes        |
- 2.9 When communicating a traffic queue its length shall also be quoted as a distance in miles.
- 2.10 For the purposes of this Agreement, a queue is defined as being where the speed of vehicles is less than 20 miles per hour.

### 3 Reporting Frequencies

- 3.1 Traffic Information Outlets shall be informed if:
- (i) a queue reaches eight minutes delay;
  - (ii) a queue changes by five minute band;
  - (iii) substantial delay ends i.e. delay less than eight minutes; and
  - (iv) the Company shall report to TSCC every 30 minutes irrespective of traffic conditions.
- 3.2 The Company shall not open any area to traffic unless the following requirements are met:
- (i) appropriate road markings have been laid or removed;
  - (ii) the carriageway has been fully swept and cleared of all items of Construction Plant, personnel, materials and debris;
  - (iii) adjacent road restraint systems, where required, have been erected and tensioned;

---

**Appendix 1/17: Traffic Safety and Management**

- (iv) the Company shall not have to impose future traffic restrictions on the section of carriageway to undertake New Works which could have reasonably been completed under the preceding traffic control period; and
- (v) all temporary or permanent signing and lighting is in place.

**4 Traffic Safety and Control Officer**

- 4.1 The Company shall appoint a senior member of its staff to act as Traffic Safety and Control Officer. This person shall be responsible for all traffic safety and control during the construction of the New Works and shall liaise with the Relevant Authorities as required. The Traffic Safety and Control Officer shall take instructions directly from the Contracting Authority and, in the case of emergency, from the Police where they have assumed control. Radio contact should be maintained at all times with the Traffic Safety and Control Officer.
- 4.2 The responsibilities of the Traffic Safety and Control Officer shall include the following:
  - (i) All traffic management measures associated with the New Works;
  - (ii) Ensuring that all equipment is in place and in full working order at all times;
  - (iii) Enforcement of all relevant Health and Safety directives, relating to operations and live traffic;
  - (iv) Enforcement of site access requirements;
  - (v) Liaison with the Contracting Authority and the Relevant Authorities and continued monitoring of the traffic management measures adopted; and
  - (vi) Arranging for watchmen and other staff so that the New Works Site is patrolled and inspected at all times and equipment attended to and maintained and in the case of accidents have replacement signs, cones, bollards and lights and the like erected without delay.
- 4.3 The Company shall notify the Contracting Authority and the Relevant Authorities with the name and 24 hour contact telephone number of the Traffic Safety and Control Officer appointed.

**5 Lane Occupations**

- 5.1 Notwithstanding other provisions of this Agreement, one lane for use by all permitted classes of vehicles and one narrow lane for the use of cars and other light vehicles shall be provided in each direction on the mainline carriageway of the Existing A90 Trunk Road, Existing A956, Existing A944, Existing A96 Trunk Road and the New A90 Trunk Road during the New Works, as a minimum requirement.
- 5.2 The Company shall apply to the Contracting Authority for written approval to reduce the Lane provisions described in paragraph 5.1 above to a minimum of one Lane for use by all permitted classes of vehicle in each direction on the mainline carriageway of the Existing A90 Trunk Road, Existing A956, Existing A944, Existing A96 Trunk Road and the New A90 Trunk Road.
- 5.3 The Company shall demonstrate to the Contracting Authority that such applications are necessary in terms of either buildability or health and safety.
- 5.4 Applications shall be made a minimum of 4 weeks in advance of any planned reduction to the provision of paragraph 5.1 above during the New Works.
- 5.5 In very exceptional weather circumstances, such as very heavy snow, or in other very exceptional circumstances necessary for the carrying out of the New Works and approved

---

**Appendix 1/17: Traffic Safety and Management**

by the Contracting Authority, (which shall not be unreasonably withheld) a minimum of one Lane for use by all categories of vehicle in each direction shall be provided on the mainline carriageway of the Existing A90 Trunk Road, Existing A956, Existing A944, Existing A96 Trunk Road and the New A90 Trunk Road.

- 5.6 Reduction to the provision of paragraph 5.1 above shall not be permitted during the following periods, except in the case of emergencies:
- (i) Christmas and New Year holidays (24 December to 2 January inclusive);
  - (ii) Good Friday to Easter Monday inclusive;
  - (iii) between Friday and Monday inclusive on any local Bank holiday or public holiday weekend during May or September;
  - (iv) between the inclusive dates for the Offshore Europe Oil and Gas Conference and Exhibition;
  - (v) between the inclusive dates for the Scottish Golf Open each year that it is held in the Aberdeen area; and
  - (vi) as directed by the Police.
- 5.7 On Side Roads reduction to the existing provision of Lanes shall be subject to the prior written approval of the Relevant Authorities or land owners or occupiers and a temporary replacement route or temporary diversion is in operation.
- 5.8 The Company shall provide Consultation Certificates in accordance with Paragraph 1.8 to Part 4 of this Schedule 2 in respect of this requirement.
- 5.9 Lane Occupation charges shall be applied in accordance with Schedule 6.

**6 Safety of Personnel**

- 6.1 Notwithstanding any other requirements of this Agreement, safety zones at all Temporary Traffic Management Schemes on the New Works Site shall be a minimum of 1.2 metres wide unless the Company shall as part of the Temporary Traffic Management Schemes incorporate a temporary vertical concrete or steel safety barrier in lieu of other means of demarcation allowed under the other requirements of this Agreement. In such an event, the safety zone shall be a minimum of 500 millimetres wide.
- 6.2 No personnel or items of plant (other than that required for signing and coning operations) shall enter a newly closed off area until such times as the traffic has been satisfactorily diverted.
- 6.3 The Contracting Authority have the right to instruct the Company's workmen on any matter relating to the safety of personnel and traffic safety and control, including signing and coning.
- 6.4 All drivers including those delivering plant and materials shall be given clear instructions regarding the traffic management arrangements applicable at that particular time.
- 6.5 All personnel working on or adjacent to trafficked roads shall be issued with printed copies of appropriate safety instructions and receive training as necessary.

**7 Requirements for Vehicles used on the New Works**

- 7.1 Where Works are carried out on or adjacent to a road open to vehicles, all vehicles and mobile plant operating on or adjacent to that road in the construction of the Works shall be painted in a conspicuous colour as described hereafter :

---

**Appendix 1/17: Traffic Safety and Management**

- (i) All vehicles used in mobile lane closures as defined in Section 6 “Type C Works” in Chapter 8 of the Traffic Signs Manual shall be painted in non-reflectorised yellow (Colour No 356 to BS 381 C or similar).
  - (ii) Similarly all vehicles engaged in New Works within unprotected trafficked lanes (for example, setting up major traffic management layouts such as tapers and contraflows) on high speed roads shall be painted non-reflectorised yellow.
  - (iii) All other vehicles undertaking New Works shall be generally light in colour preferably but not necessarily non-reflectorised yellow and/or provide, over the full width and height of the vehicle which is exposed to approaching vehicles, conspicuous markings and signs to define clearly that the vehicle is a roadworks vehicle.
  - (iv) Vehicles shall have a sign board reading “Highway Maintenance” (to Diagram 740A of Schedule 12 Part V of the Traffic Signs Regulations and General Directions 1994) fixed at the rear.
  - (v) The lettering shall be 150 millimetres “x height” except that for light vans and cars it shall be the largest “x height” that can be accommodated out of the following heights: 37.5, 50, 62.5 or 100 millimetres.
  - (vi) The lettering shall be black capital letters from the alphabet described in the Traffic Signs Regulations and General Directions 2002 Schedule 13 Part II on a yellow non-reflectorised background in accordance with BS 381C, Colour No 355.
  - (vii) All goods vehicle classes and construction vehicles shall be fitted with an audible reversing warning device.
  - (viii) All vehicles entering the New Works Site for any purpose shall comply fully with the requirements of Specification Appendix 1/19.
- 7.2 Vehicles and plant shall be provided with either roof mounted light bars or at least two amber flashing beacons, and light vans and cars shall be provided with a roof mounted amber flashing distinctive lamp.
- 7.3 All warning lamps shall be switched on when the vehicle or plant is manoeuvring into or out of the location of the New Works, operating at low speed on the carriageway or hardshoulder open to vehicles or standing on a carriageway or hard shoulder open to vehicles.
- 7.4 Hazard warning lights are not an acceptable alternative to roof mounted flashing lamps, but may be used in addition.
- 7.5 All vehicles and plant shall be free from oil and fuel leaks and if refuelled on the New Works Site care shall be taken to prevent spillage.
- 7.6 Side tipper vehicles shall be used where such shall limit turning manoeuvres alongside trafficked lanes.
- 7.7 No vehicle shall be permitted to stop on a live section of any carriageway to load or unload materials or personnel unless specifically and unavoidably for traffic management purposes.
- 7.8 During the hours of darkness no vehicle under the control of the Company shall be driven towards oncoming traffic on a closed section of the New Works Site adjacent to live traffic.

**8 Temporary Traffic Signs**

---

**Appendix 1/17: Traffic Safety and Management**

- 8.1 The Company shall not take down existing local or advance direction signs or regulatory or informatory signs without first either providing temporary signs displaying the same information or replacement permanent signs.
- 8.2 All traffic signs required by the Traffic Signs Regulations and General Directions 2002 to be reflective shall be made reflective by the application of Class 1 retroreflective material.
- 8.3 All temporary traffic signs shall comply with the Traffic Signs Regulations and General Directions 2002.
- 8.4 In addition to the minimum requirements for signing and coning under Chapter 8 of the Traffic Signs Manual the Company shall erect and maintain the following:
- (i) Advanced signing two miles prior to roadworks as drawing No (P) 7004 sheet 1 of 3) detailing modification to sign WBM 338.1 of Chapter 8 of the Traffic Signs Manual.
  - (ii) The standard two-line legend "Road Repairs" shall be replaced by "Major Roadworks".
  - (iii) Signing erected one mile in advance of roadworks as drawing No (P) 7005 detailing modification to sign WBM 338 of Chapter 8 of the Traffic Signs Manual.
  - (iv) The standard two line legend shall read "Delays Possible" and a third line added to the legend indicating how long delays are possible.
  - (v) At the commencement of the roadworks, the additional line shall read, for example "until July 15".
  - (vi) At least ten working days before the end of the carriageway restrictions, the date shall be specified more precisely, for example "until 25 June 2015".
  - (vii) This date shall be further revised if necessary, until the restrictions are removed.
  - (viii) Only the following abbreviations shall be used: Jan, Feb, Mar, Apr, Aug, Sep, Oct, Nov and Dec.
  - (ix) Traffic calming chevrons shall be provided within the left hand lane prior to the Works commencing at the end of the right hand Works coning splay over a length of 10 metres. See Drawing Number 100/1 illustrating traffic calming chevrons to be provided.
  - (x) Signing to Drawing Numbers W(S) 148 and W(S) 149 shall be deposited in accordance with signs WBM 339.1 and WBM 339 respectively under Chapter 8 of the Traffic Signs Manual.
  - (xi) Where within all of the drawings listed above reference is made to "The Scottish Office", it shall be deleted and replaced with "Transport Scotland".
  - (xii) Black on yellow signs as Drawing Numbers [(P) 7004 sheet 2 of 3] and [(P) 7004 sheet 3 of 3] sited at the beginning and at 1 kilometre intervals through the Works to explain why part of the road has been coned off but no Works is, or appears to be taking place.
  - (xiii) This signing shall comprise a frame on to which signs displaying any one of the approved messages below shall be fitted.
  - (xiv) This equipment shall either be permanently sited, for the duration of the Works, where it is safe and convenient to do so, or kept on one side ready for display when it is required.

**Appendix 1/17: Traffic Safety and Management**

- (xv) The signs shall be constructed and mounted in accordance with the general principles outlined in Topic 3 of Chapter 8 of the Traffic Signs Manual.
- (xvi) They shall be reflectorised by the use of Class1 retroreflective material.
- (xvii) The legends required to the works are:
  - a) WORK SUSPENDED
  - b) UNSUITABLE WEATHER
  - c) ROAD REPAIRS
  - d) MATERIALS HARDENING
  - e) LANE CLOSED FOR SAFETY
  - f) CONCRETE SETTING
  - g) LANE CLOSED TO PROTECT WORKFORCE
  - h) FURTHER WORKS AHEAD
  - i) LANE REMAINS CLOSED FOR SAFETY PURPOSES

8.5 The minimum period of inactivity which would warrant the display of a sign is 15 minutes.

**Appendix 1/18: Design of Temporary Diversions for Traffic****1 Design Of Temporary Diversions For Traffic**

- 1.1 Safe access across the New Works shall be maintained or diversions provided in accordance with the minimum standards shown in Tables 1/18A and 1/18B to this Appendix.
- 1.2 The Company shall Design temporary diversions for traffic and the associated traffic management measures as required to suit the construction staging, methods of work and Undertakers diversions.
- 1.3 The Company shall provide and maintain access to all properties adjacent to or affected by the New Works. Temporary diversions shall be maintained at all times.
- 1.4 Where existing central reserve crossovers shall be used for temporary diversion of traffic such crossovers shall require to be upgraded in advance to current design standards detailed in the DMRB.
- 1.5 The Company shall construct temporary diversion ways wherever the New Works interfere with existing public or private roads or other ways over which there is a public or private right of way for traffic, whether vehicular or non-motorised user.
- 1.6 The Company shall submit for approval to the Contracting Authority his detailed proposals as below for the temporary diversion of traffic (including non-motorised user routes) at least 6 weeks prior to the implementation date:
- i) Phasing of the diversion works including all concurrent diversions;
  - ii) Drawings showing traffic management layout including as follows:
    - (a) position of traffic signs, signals and cones;
    - (b) width of lanes;
    - (c) working areas;
    - (d) safety zones;
    - (e) details of temporary barriers for the protection of personnel;
    - (f) entry and exit points for site traffic;
    - (g) provisions for emergency vehicles;
    - (h) provisions for vehicle recovery;
    - (i) provisions for wide loads; and
    - (j) crossovers.
  - iii) Making or amending traffic orders.
  - iv) The Company shall be responsible for the payment of all charges associated with the preparation and publication of all road related orders.
  - v) The standard of construction and lighting of diversions shall be suitable in all respects for the class or classes of traffic using the existing ways. Any temporary diversion of a road shall have a bituminous or asphaltic surface. All access provision shall be to a standard equivalent to that in place upon commencement of the New Works.
  - vi) Temporary diversions of the Trunk Roads shall be designed in accordance with the DMRB to a minimum Design speed of 70kph.

**Appendix 1/18: Design of Temporary Diversions for Traffic**

- vii) Any temporary diversions of Slip Roads and Side Roads shall be designed to a minimum Design speed of 50kph.
- viii) The Company shall give the Contracting Authority at least 14 days written notice of any phased Works which require Lane Occupations.
- ix) Table 1/18B gives minimum standards for diversions of traffic.
- x) The standards shall be used to Design temporary diversions of traffic for the road or way in question should it not be possible to maintain the required width on the existing carriageway.
- xi) Notwithstanding any other requirements of this Agreement any generator required for powering temporary traffic lights shall not be permitted within 100 metres of any occupied property.

**2 Maintenance**

- 2.1 Temporary diversions are deemed to be temporary works and are the responsibility of the Company. They shall be maintained such that the routes are available and in a suitable condition for public use at all times while the diversion is in operation.
- 2.2 The Company shall make all necessary arrangements with owners and occupiers of any land, in addition to that provided in this Agreement, which is temporarily required for the diversion of traffic.
- 2.3 No revised arrangement affecting bus stops as a consequence of the Design or the construction of the New Works shall be permitted without the prior written approval of the Relevant Authority. The Relevant Authority shall require a minimum of 12 weeks' notice to consider such approval.
- 2.4 Temporary diversion signing shall be maintained in good order and covered or removed when the diversion is not in operation.

Non motorised user access shall be provided at all times. |
| Stoneyards Access Road, within the LMA and/or Traffic Management linked to the AWPR/B-T Project. | May be closed between the hours 2100 and 0600 on Weekdays and Saturday and Sunday if approval is granted in writing from the Contracting Authority.                           | Refer to Appendix 1/17. Non motorised user access shall be provided at all times. |

## Part 4: Specification

**Appendix 1/18: Design of Temporary Diversions for Traffic**

| <b>Description</b>                                                                                          | <b>Requirements</b>                                                                                           | <b>Remarks</b> |
|-------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|----------------|
| Balmedie south and north junction, within the LMA and/or Traffic Management linked to the AWPR/B-T Project. | Either junction cannot be closed until an alternative route is provided and approved by Aberdeenshire Council |                |

## Part 4: Specification

## Appendix 1/18: Design of Temporary Diversions for Traffic

Table 1/18B: Schedule of Standards for Temporary Diversions of Traffic

| Route                                             | Parameter                                          | Minimum Standard                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Existing A90 Trunk Road, Existing A96 Trunk Road. | General                                            | Subject to the requirements of Chapter 8 of the Traffic Signs Manual.<br>No diversion out with the limits of the Trunk Roads shall be permitted.                                                                                                                                                                                                                                                           |
|                                                   | Temporary running surface on carriageway widening  | The standard of construction of diversions shall be suitable in all respects for the class or classes of traffic using the existing carriageways. Any temporary diversion of a road shall have a bituminous or asphaltic surface. All temporary diversions shall be maintained at all times. Gradients shall not be greater than 6 per cent (except where otherwise agreed by the Overseeing Organisation) |
|                                                   | Central reserve crossing for contraflow operations | The standard of construction of diversions shall be suitable in all respects for the class or classes of traffic using the existing carriageways. Any temporary diversion of a road shall have a bituminous or asphaltic surface. All temporary diversions shall be maintained at all times. Length of crossing shall not be less than 40 metres, with a maximum crossfall of 7 per cent.                  |
| Side Roads                                        | Construction                                       | The standard of construction of diversions shall be suitable in all respects for the class or classes of traffic using the existing carriageways. Any temporary diversion of a road shall have a bituminous or asphaltic surface. All temporary diversions shall be maintained at all times, with a maximum gradient compatible with the existing side road.                                               |

**Appendix 1/19: Routeing of Vehicles****1 General**

- 1.1 The Company shall submit to the Contracting Authority his proposals for New Works Site access points including access to offices etc. at least four weeks in advance of the proposed start date for construction.
- 1.2 Access to the New Works Site for the Company's vehicles of over 3 tonnes unladen weight shall be taken at the following points only:
- (i) Existing A90 Trunk Road;
  - (ii) Existing A956 Road;
  - (iii) Existing A93 Road;
  - (iv) Existing A944 Road;
  - (v) Existing A96 Trunk Road;
  - (vi) Existing A975;
  - (vii) Existing A947;
  - (viii) Existing B9077;
  - (ix) Existing B977 in respect of Phase 2 New Works; and
  - (x) Existing B9000.
- 1.3 The Company shall consult and comply with the requirements of;
- Aberdeen City Council;
  - Aberdeenshire Council;
  - Transport Scotland; and
  - Landowners.
- as appropriate in connection with securing agreement to use any other existing public and private roads including footways, farm and house accesses. The Company shall provide consultation certificates in accordance with the Certification Procedure in respect of this requirement.
- 1.4 The Company shall provide, maintain and keep available at all times equipment as may be necessary to keep such ways clean.
- 1.5 The Company shall appraise itself of the standards of such routes with regard to height, weight or other restrictions by which its Operations may be limited or affected.
- 1.6 Any strengthening work required shall be carried out by the Company to the approval of the Overseeing Organisation, Aberdeen City Council, and Aberdeenshire Council, as appropriate.
- 1.7 All other possible access points to the New Works from existing roads shall be signed with the 'NO ACCESS TO CONSTRUCTION TRAFFIC' sign (layout to be approved by the Contracting Authority).
- 1.8 The access and egress points shall be kept clear at all times and shall be constructed to a suitable standard to achieve a suitable gradient and running surface to permit a smooth access and egress of vehicles in a forward direction.

## Part 4: Specification

---

**Appendix 1/19: Routeing of Vehicles**

- 1.9 All accesses shall comprise a minimum paved width of 6.5 metres for a distance of 20 metres from the public road.
- 1.10 All accesses shall incorporate a suitable wheel wash on the exit side.
- 1.11 All roads and accesses within the New Works Site, including existing public and private roads, footpaths, bridleways, farm field and house accesses used by any vehicles engaged on the New Works or any new roads which are part of the New Works and which are being used by traffic shall be kept clean and clear of all dirt, mud or other materials dropped by the said vehicles.
- 1.12 The Company shall provide, maintain and keep available equipment, such as a vehicle incorporating a suction device and a road brush, as may be necessary to keep the roads clean.
- 1.13 All egresses shall incorporate a suitable wheel wash on the exit side.
- 1.14 Bulk Haulage of material excavated within the New Works Site shall be carried out on haul roads within the New Works Site wherever possible.
- 1.15 The use of public roads for this operation shall only be permitted subject to consultation with the Overseeing Organisation, Aberdeen City Council, or Aberdeenshire Council, as appropriate, notwithstanding at grade crossings of public roads, which may be permitted subject to the Company submitting satisfactory traffic management proposals to the Contracting Authority
- 1.16 Sufficient information, including details of the frequency of plant crossing, loads and working period of crossings shall be supplied to the Contracting Authority to enable the Contracting Authority to consider the proposal.
- 1.17 If the proposed method of construction involves the use of any part of the permanent New Works by construction traffic, the Company shall take any necessary measures to protect such permanent New Works.
- 1.18 The Company shall submit to the Contracting Authority details of proposed borrow pits and tipping areas, which are off the New Works Site and the intended routing of vehicles to and from such sites.
- 1.19 The Company should also inform the Contracting Authority of the type of such vehicles to be used for transport, which should be compatible with the standard of the above routes.
- 1.20 The Company shall provide, erect and maintain such traffic signs, lamps and barriers etc. complying with Clause 117 of the Specification as may be required to ensure the observance of requirements and restrictions detailed in this Appendix.
- 1.21 At-grade right turns or U-turns to and from or on the New or Existing Trunk Roads shall be prohibited at all times.
- 1.22 Right turn manoeuvres shall only be permitted at grade separated junctions.
- 1.23 Persistent infringement of the foregoing restrictions shall be deemed a Company Default in terms of this Agreement.
- 1.24 If the Company wishes to make use of existing laybys as access points to the New Works Site, approval shall be obtained from the Relevant Authorities and, where required, an alternative layby provided for the duration of the New Works, to accommodate bus services, breakdown situations and Police traffic monitoring operations.
- 1.25 Any work which necessitates machinery and plant crossing public roads shall only be permitted with the prior written approval of the Relevant Authority.

**Appendix 1/19: Routeing of Vehicles**

- 1.26 Notwithstanding such approval being granted all such work shall be in compliance with the requirements of Chapter 8 of the Traffic Signs Manual and Traffic Signs Regulations and General Directions 2002.

**2 Movement of Machinery and Plant across Public Roads**

- 2.1 The Company shall not move excavated material across public roads unless written authorisation has been obtained from the Relevant Authorities.
- 2.2 Any plant crossing shall be traffic signal controlled and shall meet the requirements of Section 4.5 of Chapter 8 of the Traffic Signs Manual.
- 2.3 The Company shall keep the crossing area in a safe condition and as good a condition at all times as the road surface on either side of it. The Company shall take such action as is necessary to protect and maintain the surface of the public road crossed by Constructional Plant.

**3 Temporary Structures for the Diversion of Public Roads or for Construction Traffic Spanning Areas used by the Public**

- 3.1 For any temporary structures which may be required for temporary diversions of public roads or for spanning areas used by the public, the following criteria shall apply:
- (i) The Company shall follow the technical approval procedures contained in BD2 of the DMRB for the design of all temporary structures required to carry public roads or to span areas used by the public.
  - (ii) The Company shall provide copies of the Design and Design Check Certificates in accordance with the Certification Procedure.
  - (iii) For temporary Structures spanning the New and Existing Trunk Roads, the headroom shall be not less than 5.7 metres, excepting where the road below is designated a 'High Load Route' , where the minimum headroom shall be 6.45 metres
  - (iv) Notwithstanding the provisions of BD 2, all temporary structures for the diversion of public roads or spanning areas used by the public shall be designated as Category 3 structures.
  - (v) Designs shall be undertaken in accordance with the DMRB and Transport Scotland's Interim Amendments.

## Part 4: Specification

**Appendix 1/20: Recovery of Vehicles****1 Recovery Vehicles to be Provided****1.1 Heavy Recovery Vehicles**

1.1.1 A minimum of one number heavy recovery vehicle shall be provided on the New Works Site at all times available for roadworks to the New and Existing Trunk Roads.

1.1.2 The heavy recovery vehicle shall comply with the following:

- (i) Be a 3 axle vehicle capable of suspend towing a fully laden 44 tonne vehicle up a slope of 4 per cent and shall comply with all appropriate current legislation including Road Vehicles (Construction and Use) Regulations, Road Transport Act and Road Traffic Act. The vehicle shall be fitted with either a 10 tonne single power winch or two power winches of not less than 8 tonnes each. All equipment shall be power-operated with safe working load ("SWL") indicated and with operating levers/buttons clearly marked for operational use.
- (ii) Be equipped with chains, wire ropes and shackles suitable for the recovery a fully-laden 44 tonnes gross vehicle weight ("GVW") vehicle. All chains, wire ropes and shackles shall have test certificates and/or stamped showing the SWL, be free from snags, excess stretch and wear.
- (iii) Have seating for not less than two adult passengers (in addition to the recovery operatives).
- (iv) Be conspicuous, for example, by marking with suitable tape (not less than 125 mm wide) to sides and rear of the vehicle.
- (v) The heavy recovery vehicle shall be fitted with the following as a minimum requirement:

| Quantity | Item                                                                                                          |
|----------|---------------------------------------------------------------------------------------------------------------|
| 1        | Amber lightbar to comply with The Road Vehicles Lighting Regulations 1989                                     |
| 2        | Fully adjustable lights to illuminate both sides and rear of the vehicle                                      |
| 2        | Fire extinguishers (1 Number 6 kilograms (net) dry powder; 1 Number 9 litre (net) aqueous film forming foam   |
| 1        | 1-10 person first aid kit to include disposable surgical gloves                                               |
| 2        | 10 metres 12 tonne nylon straps                                                                               |
| 2        | 30 metres by 13 millimetres polypropylene rope                                                                |
| 1        | 44 tonne straight tow pole                                                                                    |
| 1        | 44 tonne cranked tow pole                                                                                     |
| 10       | Highway cones 750 millimetres high                                                                            |
| 1        | Proof load tested crane. (Overlift proof test – static 7.5 tonnes, underlift proof test –static 7.0 tonnes.); |
| 1        | Suitable socket set including AF/Metric and BA sizes                                                          |
| 1        | Suitable tool kit                                                                                             |
| 2        | 12 tonne bottle jacks                                                                                         |
| 1        | Suitable wheelbrace to fit Heavy Goods Vehicles in common use and a torque                                    |

|          | wrench                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 1        | Suitable jump leads (24 volt)                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1        | Explosion and flame proof hand lamp                                                                                                                                                                                                                                                                                                                                                                                                       |
| 1        | Crowbar                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1        | Copper hammer                                                                                                                                                                                                                                                                                                                                                                                                                             |
|          | The necessary fittings for connection, from air braking system of a broken down or accident damaged vehicle, to the air braking system of the heavy recovery vehicle                                                                                                                                                                                                                                                                      |
| 2        | Wheel chocks of Heavy Goods Vehicle size                                                                                                                                                                                                                                                                                                                                                                                                  |
| 4        | Suitable lengths of wood block skidding                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1        | Rear lighting board incorporating 'ON TOW' legend in lettering of not less than 70 millimetres on conspicuously coloured background to conform with the size, colour and type illustrated by Diagram 5, Section B, Schedule 19 of the Roads Vehicles Lighting Regulations, 1989. The board shall be fitted with lights, reflectors and indicators. When required the recovery vehicle index number or trade license plate shall be fitted |
| 1        | Sledge hammer – 7lbs minimum                                                                                                                                                                                                                                                                                                                                                                                                              |
|          | ADR (HAZCHEM) chart                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 50kg     | Dry fine sand stored in a waterproof container                                                                                                                                                                                                                                                                                                                                                                                            |

(vi) The heavy recovery vehicle shall also carry as a minimum requirement;

| Quantity | Item                                          |
|----------|-----------------------------------------------|
| 4        | (a) 'D' shackles SWL 12 tonnes each           |
| 4        | (b) 'D' shackles SWL 3 tonnes each            |
| 2        | (c) Suitable length chains SWL 12 tonnes each |
| 2        | (d) Suitable length chains SWL 5 tonnes each  |
| 2        | (e) Suitable length chains SWL 3 tonnes each  |

NOTE: All lifting chains and equipment shall be fully certified by an independent competent person to comply with all current legislation. Shackles listed in (vi) (a) and (b) should be stamped with the appropriate SWL. Equivalent wire ropes may be substituted for chains listed in (vi) (c), (d) and (e).

- (vii) The heavy recovery vehicle shall carry, and use when necessary, equipment designed and manufactured for the purpose of locking the steering of the broken-down or accident damaged vehicle in order to tow in a reverse direction.
- (viii) The heavy recovery vehicle shall carry equipment to enable the recovery crew to remove the drive line or shafts of the broken down or accident damaged vehicle.
- (ix) The heavy recovery vehicle shall carry blocks with a SWL of 8 tonnes, 1 number per winch and 2 number on boom (crane) wires.

## Part 4: Specification

**Appendix 1/20: Recovery of Vehicles**

## 1.2 Light Recovery Vehicle

1.2.1 A minimum of two number light recovery vehicles shall be provided on the New Works Site at all times available for roadworks to New and Existing Trunk Roads and Motorways.

1.2.2 The light recovery vehicle shall comply with the following:

- (i) be capable of carrying or towing, by means of an underlift, a vehicle weighing 2800kg up a slope of 4° and shall comply with all appropriate current legislation including Road Vehicles (Construction and Use) Regulations, Road Transport Act and Road Traffic Act.
- (ii) Be capable of recovering motor cycles.
- (iii) Be capable of recovering trailers (i.e. caravans, boat trailers, horse boxes, etc.)
- (iv) Have seating capacity for four adult passengers (in addition to the recovery operatives).
- (v) Be conspicuous, for example, by marking with suitable tape (not less than 125 mm wide) to sides and rear of the vehicle.
- (vi) The light recovery vehicle shall be fitted with the following as a minimum requirement:

| Quantity | Item                                                                                                        |
|----------|-------------------------------------------------------------------------------------------------------------|
| 1        | Amber lightbar to comply with The Road Vehicles Lighting Regulations 1989                                   |
| 2        | Fully adjustable lights to illuminate both sides and rear of the vehicle                                    |
| 2        | Fire extinguishers (1 Number 6 kilograms (net) dry powder; 1 Number 9 litre (net) aqueous film forming foam |
| 1        | 1-10 person first aid kit to include disposable surgical gloves                                             |
| 1        | 30 metres by 13 millimetres polypropylene rope                                                              |
| 1        | 6 tonne straight tow pole                                                                                   |
| 10       | Highway cones 750 millimetres high                                                                          |
| 1        | Proof load tested winch and/or spectacle lift                                                               |
| 1        | Suitable socket set including AF/Metric and BA sizes                                                        |
| 1        | Suitable tool kit                                                                                           |
| 1        | 3 tonne bottle or trolley jack                                                                              |
| 1        | Suitable wheelbrace to fit cars and Light Goods Vehicles in common use                                      |
| 1        | Suitable jump leads (24 volt)                                                                               |
| 1        | Explosion and flameproof hand lamp                                                                          |
| 1        | Crowbar                                                                                                     |
| 1        | Quick change towing hitch suitable for 50 millimetres, 2 inch or jaw type fittings                          |
| 1        | Broom and shovel                                                                                            |
| 1        | Wheel chocks of Light Commercial size                                                                       |
| 2        | Suitable lengths of wood block skidding                                                                     |

## Part 4: Specification

**Appendix 1/20: Recovery of Vehicles**

| Quantity | Item                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1        | Rear lighting board incorporating 'ON TOW' legend in lettering of not less than 70 millimetres on conspicuously coloured background to conform with the size, colour and type illustrated by Diagram 5, Section B, Schedule 19 of the Roads Vehicles Lighting Regulations, 1989. The board shall be fitted with lights, reflectors and indicators. When required the recovery vehicle index number or trade licence plate shall be fitted |
|          | Total lift facility – 2800kg slideback deck (7.6 metres minimum) or heavy duty dollies                                                                                                                                                                                                                                                                                                                                                    |
| 50kg     | Dry fine sand stored in a waterproof container                                                                                                                                                                                                                                                                                                                                                                                            |

(vii) The light recovery vehicle shall also carry as a minimum requirement:

| Quantity | Item                                                           |
|----------|----------------------------------------------------------------|
| 4        | (a) 'D' shackles SWL 3 tonnes each                             |
| 2        | (b) suitable length wire ropes SWL 3 tonnes each               |
| 2        | (c) ratchet jackets SWL 6 tonnes each, or hydraulic equivalent |
| 2        | (d) suitable towing trolley                                    |

NOTE: All lifting chains and equipment shall be fully certified by an independent competent person to comply with all current legislation. An equivalent chain may be substituted for the wire rope listed in (vii) (b).

(viii) The light recovery vehicle shall carry, and use when necessary, equipment designed and manufactured for the purpose of locking the steering of the broken-down or accident damaged vehicle in order to tow in a reverse direction.

## 2 Inspection Requirements

### 2.1 The Vehicle

2.1.1 The Company shall ensure that all recovery vehicles are maintained in such condition that at all times the vehicles conform to the Road Traffic Act and Regulations made thereunder (Construction and Use and Road Vehicle Lighting Regulations) so as to be fit to be used on the road. The Company shall provide to the Contracting Authority evidence of this roadworthiness of the Company's recovery vehicles by successful completion of an inspection by the Vehicle Inspectorate or Freight Transport Association, conducted not less than 14 days nor more than 28 days before the vehicles are required.

2.1.2 The Company shall arrange for all recovery vehicles to be inspected by the Vehicle Inspectorate or Freight Transport Association at not less than 6 monthly intervals and shall provide evidence of inspection and testing results to the Contracting Authority when necessary.

### 2.2 Lifting equipment

2.2.1 All lifting equipment shall be fully certified by an independent competent person to comply with all current legislation.

### 2.3 Reports

---

## Appendix 1/20: Recovery of Vehicles

- 2.3.1 A copy of each inspection report shall be:
- (i) provided to the Contracting Authority.
  - (ii) kept in the relevant recovery vehicle.

### 2.4 Record form

- 2.4.1 The Company shall submit weekly to the Contracting Authority duplicate record forms which log the regular checks made on each recovery vehicle. A sample form is given in Sheet 2 of this Appendix.

## 3 Location for Recovery Vehicle(s)

- 3.1 Locations of vehicles shall be determined by the Company and agreed with the Contracting Authority prior to commencement of each stage of the New Works.
- 3.2 The recovery vehicles shall be located within easy access to any Temporary Traffic Management Scheme.

## 4 Communication System

- 4.1 In addition to the requirements of Appendix 1/3, the Company shall:
- (i) provide a secondary 'back up' communications system (e.g. mobile telephone, 2-way radio link or land line) between the recovery base station and all recovery vehicles, and
  - (ii) provide an emergency telephone and direct land line between the recovery base station(s) and the police.
- 4.1.2 The Company shall be responsible for all associated equipment and payment of fees to operate the system which shall be established and fully tested prior to the start of the New Works.

## 5 Location(s) for Vehicle Removal

- 5.1 At all times when the New or Existing Trunk Roads have traffic management due to the New Works, the Company shall be responsible for the removal of shed loads and vehicles that are stationary due to mechanical breakdowns, accident damage or abandoned in the trafficked road. The Company shall accept the instructions of the Contracting Authority or the Police in connection with this service but generally shall be required to remove the obstruction clear of the New Works, such that the running carriageway is cleared in the shortest possible time. Should the Police be unavailable then the driver's consent shall be obtained in writing if possible prior to such removal.
- 5.2 Broken down or accident damaged vehicles shall be removed to a safe location with public telephone facility on the local road network.
- 5.3 If a vehicle cannot be moved immediately and, in the opinion of the Police, the traffic flows are heavy enough to justify such action, the Company shall direct traffic onto an emergency route.
- 5.4 The Company shall make no charge for this recovery service to the owner or driver of the recovered vehicle.

## 6 Explanatory Leaflet

- 6.1 The Company shall ensure that the recovery vehicle operatives issue leaflets to the drivers of vehicles requiring assistance, before recovery commences. These shall have been

---

## Appendix 1/20: Recovery of Vehicles

prepared in liaison with the Police and in accordance with Sheet 3 of this Appendix, and have been approved by the Contracting Authority before issue to the recovery firm.

### 7 Limits of Service

- 7.1 The service shall operate within the limits of the New Works Site and/or corresponding temporary traffic management sections.

### 8 Requirements for Recovery Personnel

- 8.1 Suitability: It is the responsibility of the Company to ensure that all personnel involved with vehicle recovery are suitable to work with 'vulnerable' motorists.

- 8.2 Training: The Company shall ensure that all personnel involved with vehicle recovery shall hold a certificate certifying successful completion of an appropriate vehicle recovery course recognised by either the Institute of the Motor Industry (IMI) or the Moor Industry Training Standards Council (MITSC). A copy of each certificate shall be provided to the Contracting Authority not less than 14 days before the commencement of the New Works.

- 8.3 Personal Protective Equipment: In addition to the provisions identified in the Health and Safety risk assessment conducted by the Company, the following items shall be provided for each crew member of the recovery vehicle:

- (i) Safety helmet CE marked to EN 397:1995 Specification for Industrial Safety Helmets;
- (ii) Reflective safety garment complying with sub-Clause 117.18 of the Specification;
- (iii) Boots with steel reinforcement toecaps and/or safety footwear in accordance with BSEN 345;
- (iv) Suitable gloves with the appropriate CE mark; and
- (v) Protective goggles in accordance with BS 2092.

Note: All personal protective equipment should be stored and maintained in good, clean condition.

- 8.4 Identification: The Company shall ensure that all personnel involved with vehicle recovery are issued with the following:

- (i) An identity card which incorporates the name of the recovery Company (or the Company), and the name and a photograph of the holder. This card shall be available for inspection at all times and a copy shall be submitted to the Contracting Authority prior to commencement of the operative working.
- (ii) A reflective safety garment (referred to in 2.13.2 above) which prominently displays the Company's name.
- (iii) Working hours: Recovery vehicles shall be provided 24 hours a day during the New Works. Recovery operatives shall be on duty for a maximum of 12 hours with the provision that no work should be undertaken in the following 12 hour period.

### 9 Record Form

- 9.1 The Company shall submit weekly to the Contracting Authority completed duplicate record forms which log the assistance given by the recovery vehicle and their operatives. Sample forms are given in Sheet 4 of this Appendix.

**Appendix 1/20: Recovery of Vehicles****SHEET 3: LEAFLET FOR ISSUE BY RECOVERY VEHICLE OPERATIVES TO DRIVERS OF ALL BROKEN DOWN OR ACCIDENT-DAMAGED MOTOR VEHICLES**

**Name of Scheme: Aberdeen Western Peripheral Route / Balmedie – Tippetty.**

**Vehicle Recovery Service – Explanatory Leaflet authorised by Aberdeen City Council as the Contracting Authority for issue to drivers of broken-down and accident-damaged motor vehicles within the above works.**

Leaflet to be distributed by recovery vehicle operatives of the appointed recovery firm on behalf of Aberdeen City Council as the Contracting Authority.

The roadworks operations commence at the 'Roadworks Ahead – 3 miles' sign and end at the 'Roadwork End' sign.

The recovery service provided along the extent of the roadworks operation is free.

Vehicles will be recovered clear of the roadworks operations to a safe location on the local network unless otherwise directed by the police.

It will then be at the discretion of individual drivers of broken-down or accident damaged vehicles requiring assistance to arrange for assistance or the removal of their vehicle to a garage of their choice. The operators of the free recovery service do not make such arrangements.

Useful contact numbers are given below:

- (a) Local Garage – To be populated by the Company
- (b) AA – To be populated by the Company
- (c) RAC – To be populated by the Company
- (d) Greenflag – To be populated by the Company

|                                                                                                           |                 |                      |                                    |                               |                     |                          |
|                                                                                                           |                 |                      |                                    |                               |                     |                          |

**Appendix 1/21: Information Boards****1 Information Boards**

- 1.1 The Company shall provide and erect 20 number of each display board detailed below in accordance with Scottish Office Technical Memorandum SH3/91 'Trunk Road Schemes Under Construction – Display Signs' which is available from:
- HMSO  
71 Lothian Road  
Edinburgh EH3 AA2  
Telephone: 0131-228-4181
- 1.2 The legends shall consist of:
- Aberdeen Western Peripheral Route / Balmedie – Tipperty**  
DBFO CONTRACT  
ROAD OPENING [ ]
- 1.3 The Company shall determine and insert the anticipated opening date as appropriate.

Part 4: Specification

---

**Appendix 1/22: Progress Photographs****1 Progress Photographs**

- 1.1 The Company shall employ a professional photographer to undertake the progress photographs who shall be approved by the Contracting Authority. Prior to the approval of a professional photographer submission of samples of previous work shall be made to the Contracting Authority.
- 1.2 Prints shall be delivered and mounted in albums to the approval of the Contracting Authority and labelled as per sub-Clause 122.2 of the Specification.
- 1.2.1 Proof prints shall be made available to the Contracting Authority within seven days of exposure and any which are unacceptable shall be retaken immediately.
- 1.2.2 All photographs shall also be supplied in JPEG standard format or equivalent.
- 1.3 The following specification fulfils the progress photographs requirements for the New Works.
- 1.3.1 **Ground Progress Photographs**
- (i) A set of ground progress photographs shall be taken prior to commencement of the New Works on site and then at approximately one month intervals or as directed by the Contracting Authority until completion of the New Works from the same location each time;
  - (ii) A set of ground progress photographs shall comprise not less than 300 photographs;
  - (iii) For each photograph, two 254 millimetres x 204 millimetres colour prints shall be supplied;
  - (iv) Two copies of each set of progress photographs shall also be supplied on compact disc in JPEG format;
  - (v) A report shall be provided with each set of photographs detailing the date, location and direction of view for each photograph in the set.
- 1.3.2 **Aerial Progress Photographs**
- (i) A set of aerial progress photographs shall be taken at the commencement of the New Works and further sets of aerial photographs shall be taken at 2 month intervals during the New Works. A final set of aerial progress photographs shall be taken immediately following the completion of the New Works;
  - (ii) A set of aerial progress photographs shall comprise a minimum of 100 photographs, taken with a single lens reflex digital camera;
  - (iii) Two 254 millimetres x 204 millimetres colour prints shall be supplied for each photograph;
  - (iv) Two copies of each set of aerial progress photographs shall also be supplied on compact disc in a JPEG format;
  - (v) Photographs shall be taken from the same height, direction and of the same viewpoint at each 2-month interval;
  - (vi) Viewpoints, heights and directions shall be determined and detailed on an Ordnance Survey map prior to photographs being taken; and
  - (vii) The choice of aircraft used for taking the shots should be such that it shall maximise the accuracy of photographing the viewpoints.

## Part 4: Specification

---

**Appendix 1/22: Progress Photographs**

- 1.3.3 The prints and compact discs arising from 1.6 and 1.7 above shall be supplied to the Contracting Authority in suitable albums / cases.
- 1.3.4 The photographer shall be accompanied for both ground and aerial progress photographs by a member of the Contracting Authority personnel or their representatives, should they wish to attend.

**2 Timelapse Photography and Website Use****2.1 General**

- 2.1.1 The Company shall arrange to produce a high quality visual record of the construction of the New Works.
- 2.1.2 In addition to the progress photographs detailed above, the Company shall arrange for timelapse photographs to be taken throughout the construction period at a minimum of twelve locations. The Company shall propose the precise locations and number of cameras to be used for approval of the Contracting Authority within one month of the Commencement Date.
- 2.1.3 In order to obtain the best quality output, cameras shall be set to obtain an image every 10 minutes.
- 2.1.4 The Contracting Authority shall retain the rights to all images obtained by the Company. The Company may use the images in promotional material if so approved by the Contracting Authority, such approval not to be unreasonably withheld.

**2.2 Quality**

- 2.2.1 The Company shall propose the most suitable make and type of camera for each location for the approval of the Contracting Authority.
- 2.2.2 Cameras, lenses and sensors shall be of a professional grade and from a reputable supplier.
- 2.2.3 The camera resolution shall be high enough to allow the final film to be rendered as 1080p HD with a minimum resolution of 2816x1880.
- 2.2.4 The optical parameters of the proposed system shall be capable of adjustment from a remote location.
- 2.2.5 The image interval shall be capable of being adjusted remotely to obtain additional detail during specific activities.
- 2.2.6 The cameras shall be mounted on a stable structure that prohibits movement of the camera as a result of external influences such as wind or vibration.
- 2.2.7 Cameras shall be capable of working at night without significant grain or noise (0.002 lux).

**2.3 Reliability**

- 2.3.1 Each camera location shall have a suitable power and telecoms supply and a backup system shall be available to ensure that there is no loss of data.
- 2.3.2 At each camera location, suitable security measures shall be taken to prevent theft of the equipment.
- 2.3.3 Each camera shall be capable of being remotely monitored to ensure that it is working correctly or as a minimum it should be physically checked daily.
- 2.3.4 The system should be set to automatically restart after a power failure to ensure there is minimal loss of data.

---

**Part 4: Specification**

---

**Appendix 1/22: Progress Photographs**

- 2.3.5 All recorded images shall be backed up to a site remote from the camera. This shall be either automatic or undertaken on a daily basis to avoid loss of data.
- 2.3.6 Each camera shall be at least IP65 weather protected.
- 2.3.7 The controlling computer shall have storage facilities for 6 years' time lapse shooting with offsite backup facilities of the original image without further compression or adjustment.
- 2.3.8 All cameras, computer control systems and backup systems shall be regularly maintained throughout the Works.

**2.4 Post Production**

- 2.4.1 All images shall be catalogued and stored on a secure site with a suitable back up facility.
- 2.4.2 All images shall be time stamped and catalogued in a calendar format for retrieval by the Contracting Authority.
- 2.4.3 Images from the cameras shall be available to be uploaded by the Company to a project website where the general public can monitor the progress of the New Works. The web image shall be updated every 10 minutes. Any images on the public website shall allow zooming and panning around the still image without pixilation.
- 2.4.4 The images obtained through the Works shall be used to provide a record of the project. This record shall comprise: individual films of between 5 and 10 minutes duration for works undertaken in individual locations; a single complete film of between 45 and 60 minutes duration and a single complete film of between 20 and 30 minutes duration. To obtain a full record of the construction, sequences may be shown from different cameras. In addition due to the nature of the speed of the construction, the rate of progress may be accelerated at a different rate depending on the particular activity.
- 2.4.5 The Company shall supply a story board style post production plan outlining how each final film will look for the approval of the Contracting Authority prior to work on the final film.
- 2.4.6 Due to the overall duration of the project the Company shall allow for the production of annual films of 20 minutes duration, providing a record of construction within the preceeding 12 months.

**3 Web cams****3.1 General**

- 3.1.1 The Company shall provide twenty high definition pan tilt and zoom web cams, which shall provide multidirectional footage of the New Works throughout the construction period.
- 3.1.2 The exact location for each web cam shall be agreed by the Contracting Authority and the chosen locations shall reflect the New Works being undertaken during a particular time period in the construction process. The Company shall be responsible for the relocation of each web cam following such a request being made by the Contracting Authority.
- 3.1.3 The web cams shall be active 24 hours per day, 7 days per week and shall be linked through a secure telecommunication system to the main construction compound. Only authorised representatives of the Contracting Authority and the Company shall be given the security rights to view and alter the orientation of the images being gathered.
- 3.1.4 The web cams shall not be able to be viewed by the general public via the world wide web, unless made available by the Contracting Authority via the project website. Where a web-based system is proposed this shall be provided via a secure internet site. The use of such a facility shall be subject to the approval of the Contracting Authority.

**Appendix 1/22: Progress Photographs**

- 3.1.5 The Company shall be responsible for the maintenance and where necessary, the replacement, of all web cam components. The Company shall also be responsible for the provision of all connections, including power, and the computer software required to operate the web cams from the main construction compound.

---

**Part 4: Specification**

---

**Appendix 1/23: Substances Hazardous to Health****1 Substances Hazardous to Health**

1.1 The Company shall take all reasonably practicable steps to prevent members of the public being affected, due to its Operations, by substances hazardous to health (as defined in Clause 124 of the Specification), such, as inter alia, silane, bridge deck waterproofing systems, and paints.

**1.2 Restrictions in Relation to Traffic Management Measures**

1.2.1 The Company shall maintain vehicle and pedestrian access to the standards detailed in Appendix 1/18, on existing roads, as well as access to and from properties directly affected by or adjacent to the New Works, when planning measures to protect the public from substances hazardous to health.

1.2.2 If the Company proposes to carry out silane and deck waterproofing treatments for bridges over public roads without an enclosure, the Company shall arrange with the Relevant Authority an overnight closure of the road to allow these operations to proceed.

**1.3 Restrictions in Relation to Working Practices**

1.3.1 The Company shall make available all necessary personal protection equipment and other safety equipment necessary for the protection of all persons who may be exposed to substances hazardous to health in connection with the New Works. The Company shall ensure that all of its staff and sub-contractors' staff requiring such protection are fully trained in the use of the equipment and that the appropriate equipment is used by such persons when there is a risk of exposure to substance hazardous to health.

1.3.2 The Company shall submit detailed method statements, to the satisfaction of the Contracting Authority, stating how the Company shall ensure that the public are not affected by substances hazardous to health which may be used during the construction of the New Works. Such method statements shall state the proposed methods to prevent, control and monitor exposure of the public to the above substances when used or generated in or about the New Works.

**1.4 Measures to be taken to protect members of the public**

1.4.1 Where the Company is using or generating substances hazardous to health in its operations, the work shall be carried out within a fully screened enclosure, otherwise a temporary diversion shall be provided for vehicular and pedestrian traffic. The Company shall take account of the weather conditions, and if any change in these conditions renders either the enclosure or traffic diversions provided unsuitable, any work involving the use or generation of substances hazardous to health shall cease immediately.

1.4.2 If the Company employs temporary diversions as a method of protecting the public from substances hazardous to health, it shall Design all appropriate signing in accordance with chapter 8 of the Traffic Signs Manual 1991.

**1.5 Monitoring to be undertaken by the Company**

1.5.1 The Company shall prepare and maintain a register of all substances hazardous to health which are brought on to the New Works Site. The Company shall operate a documented system to control the issue and use of such material in connection with the New Works subject to the approval of the Contracting Authority.

1.6 Compliance with the requirements of this Appendix shall not in any way relieve the Company of its statutory obligations.

**Appendix 1/24: Quality Management System**

The Company shall institute and operate a quality management system complying with Schedule 5 to this Agreement.

**Appendix 1/26: Temporary Automatic Speed Camera System for the Enforcement of Mandatory Speed Limits at Roads Works (TASCAR)**

**[REDACTED]**

**Appendix 1/26: Temporary Automatic Speed Camera System for the Enforcement of Mandatory Speed Limits at Roads Works (TASCAR)**

**Appendix 2/1: List of Buildings, etc, to be Demolished****1 List of Buildings, etc., to be demolished**

- 1.1 The following buildings and structures shall be demolished;
1. the bridge structure carrying the existing A90 Edinburgh to Fraserburgh Trunk Road over the existing B979 Netherley Road (Transport Scotland structure ref; A90-780)
  2. the bridge structure carrying the existing A956 Wellington Road over the existing A90 Edinburgh to Fraserburgh Trunk Road (Transport Scotland structure ref: A90-850)
  3. the corrugated steel culvert carrying the Loirston Burn under the existing A90 Edinburgh to Fraserburgh Trunk Road (Transport Scotland structure ref: A90-846)
  4. the reinforced concrete box culvert carrying the Loirston Burn under the existing A956 Wellington Road (Aberdeen City Council structure ref: A956-D196)
  5. part of the pipe culvert carrying the Megray Burn under the existing Netherley Road Underbridge
  6. the culvert carrying the Green Burn under the existing A96 Aberdeen to Inverness Trunk Road is to be infilled (Transport Scotland structure ref: A96-TBC)
  7. the culvert carrying the Middlefield Burn under the existing A90 Edinburgh to Fraserburgh Trunk Road (Transport Scotland structure ref: A90-TBC)
- 1.2 The following buildings and structures may be demolished prior to commencement of the New Works. Where this has not occurred or has been undertaken in a partial manner, the Company shall be responsible for completing the necessary demolition works.
1. Greenloanings Cottage, Blairs, Aberdeen, AB12 5YB
  2. Carskeach, 252 North Deeside Road, Milltimber, Aberdeen, AB13 0DJ
  3. Pine Lodge, 315 North Deeside Road, Milltimber, Aberdeen, AB13 0DI
  4. Clarewood, 4 Milltimber Brae, Milltimber, Aberdeen, AB13 0DY
  5. Millbrae House, 6 Milltimber Brae, Milltimber, Aberdeen, AB13 0DY
  6. Bridgebank, 3 Milltimber Brae, Milltimber, Aberdeen, AB13 0DY
  7. Crofton, 5 Milltimber Brae, Milltimber, Aberdeen, AB13 0DY
  8. Gairnlea, Blacktop, Milltimber, Aberdeen
  9. International School of Aberdeen, Milltimber Brae, Milltimber, Aberdeen (including sports hall)
  10. Dalriach, Westfield, Milltimber, Aberdeen, AB13 0EX
  11. Grandview, Cloghill, Kingswells, Aberdeen, AB15 8SA
  12. Outbuildings (2No), Denhead of Cloghill, Kingswells, Aberdeen
  13. Outbuilding (1No), Scottish Agricultural College, Craibstone, Aberdeen
  14. 1 Sunnybank Cottage, Craibstone, Aberdeen, AB21 9ST
  15. 2 Sunnybank Cottage, Craibstone, Aberdeen, AB21 9ST
  16. Sunnybank Cottage, Craibstone, Aberdeen, AB21 9ST
  17. 6 The Holdings, Balmedie, Aberdeenshire, AB23 8XR

**Appendix 2/4: Explosives and Blasting****1 Explosives and Blasting**

- 1.1 The use of explosives and blasting within the New Works Site shall comply with the requirements of the Environmental Health Sections of Aberdeen City Council and Aberdeenshire Council, as outlined in Section 1/9 to the Specification.

**Appendix 2/5: Hazardous Materials****1 Hazardous Materials**

- 1.1 The following shall be included as part of Appendix 2/5 to the Specification to be completed by the Company.
- (i) In the event that hazardous or suspected hazardous material is found on site during the New Works the Company shall stop work in the vicinity and cordon the area off. He shall then instigate a contamination survey, which shall be an intrusive investigation and shall include collection of samples of soil and water for chemical testing. Only personnel experienced in this type of work shall carry out this investigation.
  - (ii) Samples collected as part of the investigation shall be subjected to chemical analysis at laboratories with UKAS and MCERTS accreditation for the tests being performed. The MCERTS accreditation extending only to those determinants listed in Annex A of Performance Standards for Laboratories Undertaking Chemical Testing of Soil published by the Environment Agency.
  - (iii) On completion of the investigation and chemical analysis the Company shall arrange for appropriately qualified personnel to undertake a contaminated land environmental risk assessment and prepare a remediation strategy.
  - (iv) The Company shall consult with and conform to the requirements of the Controlling Authorities, which shall include SEPA and Environmental Health Officer, Aberdeen City Council and Aberdeenshire Council, for the remediation of the site.

**Appendix 4/2: Information Required to Demonstrate Compliance of Vehicle Restraint Systems to BS 1317-1, BS EN 1317-2, BS EN 1317-3 and DD ENV 1317-4:2002****1 Information Required**

- 1.1 The Company shall submit the following supporting information demonstrating compliance with BS EN 1317-1, BS EN 1317-2, BS EN 1317-3 and DD ENV 1317-4:2002 to the Contracting Authority for acceptance:

**2 EUROPEAN COMMITTEE FOR STANDARDISATION (CEN) COMPLIANCE<sup>1</sup>**

- 2.1 Initial submission documents to be supplied for consideration of initial type test are as follows:

- a) test report in accordance with BS EN1317-1, Clause 9 (and including any additional test data required under BS EN 1317-3, Clauses 7.3 and 7.4 and DD ENV 1317-4:2002, Clauses 7.3 and 7.4);
- b) video / high speed film of test annotated showing date, test number and performance class;
- c) still photographs of complete installation including anchorage points;
- d) still photographs of vehicle before and after impact;
- e) full drawings of tested items;
- f) certification from the manufacturer that the item tested complies with drawing supplied; and
- g) certificate from test house accredited in accordance with the requirements of Series 400 (MCHW 1.400).

- 2.2 Additional information, which will be required on acceptance of initial type test prior to installation:

- a) manufacturer's specification;
- b) installation drawings;
- c) manufacturer's installation instructions including foundation requirements and test methods to verify their performance;
- d) manufacturer's repair and maintenance manual;
- e) certificate of compliance with the Quality Management Scheme 1 for the Manufacture of Fencing Components<sup>2</sup>;
- f) compliance with the Quality Management Sector Scheme 2 - Supply and Installation of Fences:
  - (i) Sector Scheme 2B for Vehicle Restraint Systems<sup>3</sup>;
- g) certificate of compliance for the Quality Management Sector Scheme 5 for the Fabrication and Installation of Bridge Parapets and Cradle Anchorages<sup>4</sup>:
  - (i) Sector Scheme 5A for The Manufacture of Parapets for Vehicle restraint systems; and
  - (ii) Sector Scheme 5B for The Installation of Parapets for Vehicle restraint systems; and
- h) nominal loads (direct forces, moments and co-existent shears) to be transferred from the parapet to the Structure or foundations<sup>5</sup>.

**Appendix 4/2: Information Required to Demonstrate Compliance of Vehicle Restraint Systems to BS 1317-1, BS EN 1317-2, BS EN 1317-3 and DD ENV 1317-4:2002****Notes**

- <sup>1</sup> All documents are to be supplied in English.
- <sup>2</sup> Item 1.2.2(e) is required for safety barrier systems and transitions.
- <sup>3</sup> Item 1.2.2(f) is required for safety barrier systems and transitions.
- <sup>4</sup> Item 1.2.2(g) is required for vehicle parapets.
- <sup>5</sup> Section 1.2.2(h) is required for vehicle parapets, safety barrier systems and transitions.

Part 4: Specification

**Appendix 4/2: Information Required to Demonstrate Compliance of Vehicle Restraint Systems to BS 1317-1, BS EN 1317-2, BS EN 1317-3 and DD ENV 1317-4:2002**

Sheet 1 of 4

| SUBMISSION FOR COMPLIANCE WITH BS EN 1317-1, BS EN 1317-2, BS EN 1317-3, AND DD ENV 1317-4:2002         |                                     |                                                                                                                                                                                                                                                                                                 |                        |                |

## Appendix 6/10: Ground Anchorages, Crib Walling and Gabions

### 1 Permanent Soil Nailing

#### 1.1 General

- 1.1.1 This specification for soil nailing is provided as the minimum acceptable standard for soil nailing forming part of the New Works. The Designer may propose more stringent protective measures if these are considered necessary. If the Company wishes to propose any modifications to this Specification then supporting information shall be provided to the Contracting Authority demonstrating that an equivalent quality of product will be provided.
- 1.1.2 Soil nails shall comprise both nail tendon and soil nail head components. Concrete pad soil nail heads shall be used.
- 1.1.3 Soil nail design shall be carried out in line with DMRB HA68/94 and CIRIA C637 Soil Nailing: Best Practice Guidelines taking cognisance where required of Geoguide 7 (Geotechnical Engineering Office, Civil Engineering Department, Government of the Hong Kong Special Administrative Region) for soil nail head design.
- 1.1.4 Corrosion protection for permanent soil nails shall be based on a detailed assessment of degradation risk, in line with CIRIA C637 Soil Nailing: Best Practice Guidelines. As a minimum, hot dip galvanised steel shall be used for tendon and head. In light of long term corrosion of the steel bar tendons, the Company shall allow for a reduction in effective diameter in the design of the soil nails.
- 1.1.5 Soil nails shall be fabricated and installed by a specialist contractor experienced in soil nail installation, using suitably trained personnel and to a method statement approved by the Designer.
- 1.1.6 The Company shall make every effort to create a green vegetated finish to soil nailed slopes including the use of recessed soil nail head assembly, with both erosion control fabric and mesh to encourage vegetation growth.

#### 1.2 Method Statement

- 1.2.1 Soil nailing works shall be carried out in accordance with a detailed method statement, which is to be approved by the Designer. Approval by the Designer shall be sought at least four weeks prior to installing the first soil nails or carrying out associated earthworks. The approved method statement shall be forwarded to the Contracting Authority two weeks prior to installing the first soil nails or carrying out associated earthworks. The method statement shall provide details of:
- a) earthworks including maximum unsupported excavation width and depth;
  - b) method of nail installation, including measures to ensure minimum ground movements above the soil nailed slope and maximum standing time between drilling of holes to insertion of nail tendons;
  - c) soil nail head assembly details, including method of recessing soil nail heads concrete pads;
  - d) method of forming the facing, where appropriate;
  - e) method of connecting the nail head assembly to the facing, where appropriate;
  - f) methods of performing field tests on both sacrificial and production nail tendons;
  - g) method of assessing damage to protective coatings where appropriate;
  - h) grouting procedures including details on bleed, flowcone and strength testing;

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions**

- i) temporary support of slopes;
- j) the time after installation before a nail is considered to be fully operational;
- k) maximum exposure period for untreated sections of excavation;
- l) form of the test records; and
- m) steel bar certificates; coupler, steel plate and nuts certificates; reinforcement bar certificates.

1.2.2 Soil nailing on existing slopes shall be undertaken without any risk of reducing the existing slope stability. Any proposed temporary excavation or placing of fill on the slope shall be agreed in advance with the Designer and detailed within the Company's method statement. Any such temporary works shall be reinstated to the original slope profile, or as otherwise agreed with the Designer, without damage or displacement of the soil nailing system.

**1.3 Alterations**

1.3.1 Once approval has been given to the method statement, details shall not be amended without prior approval of the Designer.

**1.4 Company Design**

1.4.1 Soil nails forming part of the New Works shall be designed by the Company to satisfy the requirements of this specification.

**1.5 Sources of Material Supply**

1.5.1 The proposed source of supply of the soil nails and such other materials as covered by this Specification shall be approved by the Designer prior to the commencement of the New Works. Sources of supply shall not be changed without prior approval by the Designer.

1.5.2 Details shall be provided to the Designer of the proposed soil nail reinforcement, splicers / couplers, centralisers, sheaths, load spreading plates, wedge washers, collar nuts, head assembly components and protective coatings for approval prior to the commencement of the Works. Details shall include:

- a) galvanised steel bars
  - (i) galvaniser's certificate;
  - (ii) tensile test results;
  - (iii) bend test and rebend test results; and
  - (iv) galvanised coating (BS EN ISO 1461).
- b) couplers, steel plates, nuts for couplers
  - (i) galvaniser's certificate;
  - (ii) permanent elongation and tensile test results;
  - (iii) galvanised coating (BS EN ISO 1461)

1.5.3 Materials shall be delivered to site in an undamaged condition and shall be handled, stored and protected in such a manner as to avoid corrosion or physical damage. Any soil nails or other such materials covered by this Appendix not conforming to these requirements shall be notified to the Designer for acceptance or rejection. Rejected materials shall be removed promptly from the site.

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions****1.6 Reinforcement**

- 1.6.1 High yield steel soil nails shall comply with BS 4449 or equivalent European national standard. The characteristic yield strength of the nail reinforcement shall be a minimum of 500 newtons per square millimetre.
- 1.6.2 The permanent soil nails shall have long term corrosion protection in the form of full length hot dip galvanising. This shall be applied in accordance with BS EN ISO 1461.
- 1.6.3 All permanent soil nails shall be of solid or hollow thread bar type.
- 1.6.4 The galvanised mild steel (“**GMS**”) lock off plates shall be high yield steel conforming to BS 4449 or other equivalent Eurocode national standard. They shall be hot dip galvanised according to BS EN ISO 1461.

**1.7 Splicers / Couplers**

- 1.7.1 Splicers and couplers used in the works which require the removal or repair to damaged coatings shall not be permitted for use in the New Works. Only nails greater than 4 metres in length may be spliced or coupled using a mechanical splicer or coupler. The tensile, bearing and shear strength of a splice or coupler shall be not less than 90 percent of the soil nail when considering the influence of the combination of stresses.
- 1.7.2 Bolts, screws and nuts shall comply with one of the following:
- a) BS EN ISO 898 and BS EN ISO 4016, BS EN ISO 4018 and BS EN ISO 4034, hot dip galvanized in compliance with Clause 1909 of the Specification for Highway Works. The property class of the bolts and screws shall be not less than 4.6, while the property class of the nuts shall not be less than 4.0; and
  - b) stainless steel to BS EN ISO 3506-1 and BS EN ISO 3506-2 grade A4-70.
- 1.7.3 Plain washers shall be of either Form A or Form E complying with BS 4320 and shall be made from one of the following:
- a) cold rolled carbon steel strip CS4 complying with BS 1449: Part 1.1 hot dip galvanized in compliance with Clause 1909 of the Specification for Highway Works; and
  - b) stainless steel strip designation 1.4401 or 1.4436 complying with BS EN 10029, BS EN 10048, BS EN 10051, BS EN 10258 and BS EN 10259.

**1.8 Centralisers**

- 1.8.1 The Company shall provide a minimum of four centralisers at suitable intervals over the total length of the nail. The centralisers shall be spaced at centres not exceeding 1.5 metres with the last centraliser 0.3 metres to 0.5 metres from the end of each nail.
- 1.8.2 The centralisers shall be fabricated from materials that have no deleterious effects on the soil nailing system. The centralisers shall be suitably robust to ensure they suffer no damage during installation, and maintain an appropriate grout cover to the nails and couplers.
- 1.8.3 Centralisers shall be designed to ensure that they permit the free flow of grout but retain the correct centralising function. Where soft or loose soils are encountered during nail installation, centralisers should be installed at closer spacing to ensure that the nails maintain the appropriate amount of minimum cover.

**1.9 Grout**

- 1.9.1 Unless otherwise approved by the Designer, grout for soil nails shall comprise a cement grout consisting of a pumpable mixture of Portland cement and water that can reach a minimum compressive strength of 40 newtons per square millimetre in 28 days. A

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions**

minimum of four grout cubes per day shall be made and tested according to BS 1881. The water cement ratio shall not exceed 0.45 to reduce loss of grout into surrounding ground. The grout shall not be subject to bleeding in excess of 2 percent after 3 hours. Admixtures that can control, bleed or retard the set of the grout shall be used only when approved in writing by the Designer. Their use shall be strictly according to the manufacturer's instructions. Flow cone tests, bleed tests and cube strength tests shall be completed on all grout to be used in soil nailing on site and results of each batch are provided to the Designer prior to use.

**1.10 Soil Nail Head Design**

1.10.1 Soil nail head design shall be carried out to ensure both stability of the front face of the slope and design loads that may be applied under soil mobilisation. Sizing of soil nail heads shall be based on Highways Agency HA 68/94 Figure E.2(a) or Geoguide 7 (Geotechnical Engineering Office, Civil Engineering Department, Government of the Hong Kong Special Administrative Region) (Figure 5.4). Concrete pad soil nail head recessed into the slope shall be used (see Geoguide 7.) These recessed pads shall be covered by hessian grow bags or similar and shall allow for a fully vegetated slope upon completion. A double layer of mesh and erosion control matting shall be fixed to the face to allow vegetation growth.

1.10.2 Concrete Pad: The concrete pad construction shall comprise excavation of the head, steel fixing and concreting. Reinforcement shall comprise a minimum of 3 T16 U bars in both directions. A minimum of 50 millimetres concrete cover around the reinforcing bars shall be provided. The number of T16 U bars in both directions shall be dependent upon the required head pad dimensions.

**1.11 Limitations on Construction Plant**

1.11.1 All vehicles and construction plant having a mass more than 1000 kilograms shall be kept at least two metres behind soil nailed facing or external boundaries. Where appropriate, fill within two metres from the facing shall be compacted with compaction plant suitable for the class of fill material having a mass not more than 1000 kilograms.

**1.12 Constructing Soil Nailed Slopes**

1.12.1 The Company shall construct soil nailed slopes from the top down as the soil in front of the cut slope is removed and the nails are installed and grouted at each level as approved in the method statement. The excavation shall be progressively formed in 'lifts' of not more than 2 metres height. Each lift shall be secured with any facing placed and secured in place before the subsequent lift is excavated.

1.12.2 The slope shall be excavated over the required width and depth as approved in the method statement. The excavated lift shall not be exposed for a period in excess of 24 hours or as specified in the method statement without prior approval of the Designer. Excavation shall proceed in stages exposing the minimum amount of soil which will allow the practical and expeditious installation of facing and soil nails while assuring stability of the excavated face and minimising ground movements. In all cases the maximum unsupported slope height shall not exceed 2 metres. Temporary surface protection shall be used for all cut faces exposed to inclement weather.

1.12.3 In anticipation of installing facing, the Company shall clean surfaces of all loose material and other foreign matter.

1.12.4 Where seeding of soil nailed slope faces is required seeding shall take place prior to topsoiling to reduce the risk of seed being washed away. Topsoiling and seeding shall be completed to within a maximum of 2 lifts above the working platform prior to the formation of a new lift. Erosion control matting shall be used for hydroseeding protection.

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions**

- 1.12.5 Adjacent panels of slope facing shall be joined together as instructed by the Designer.
- 1.12.6 Facing shall be terminated at the top and bottom of soil nailed slope as instructed by the Designer and detailed on the earthworks drawings.

**1.13 Drilling**

- 1.13.1 The Company shall drill holes for soil nails to the depth, diameter, alignment and position shown on the Designer's proposed earthworks drawings. Holes shall have a maximum deviation from the position shown on the drawings of +/- 50 millimetres. The maximum deviation of the drill holes from the specified horizontal alignment shall be +/- five degrees.
- 1.13.2 Casing shall not normally be required for soil nail holes. However, if the ground conditions are considered to be loose or of poor quality, casing may be considered. If casing is used, the method shall not promote mining and loosening of the soil at the perimeter of the drill hole or fracture soils with weak stratification planes by use of high pressures. Debris will need to be cleaned out of the hole prior to installation of the tendon.
- 1.13.3 Where the drill holes are located in such a way that debris can fall into the hole from the ground surface the drill hole shall be temporarily covered unless the soil nail is installed and grouted directly on completion of the drilling operation.
- 1.13.4 The drilled holes shall not be left open for more than 24 hours prior to the installation of the nail tendon and grouting, to prevent collapse of the holes. Nails should be grouted the same day.
- 1.13.5 Where soil nails are to be embedded into bedrock and bedrock level is found to be poorly defined the Company shall immediately inform the Designer and provide relevant draft drilling records to the Designer. The Designer shall then confirm bedrock level and hence required nail length prior to nail installation at that location. In all instances the decision of the Designer shall be final.
- 1.13.6 If heavily fractured bedrock material is encountered during drilling for soil nails to be embedded into bedrock the Company shall immediately inform the Designer and provide relevant drilling records to the Designer. The Designer shall then confirm whether longer nail lengths or additional nails are required prior to nail installation.

**1.14 Grouting**

- 1.14.1 Prior to grouting works, all plant, batchers, mixers, pumps, materials etc. must be approved by the Designer. Calibration certificates shall be provided by the Company to the Designer and the Contracting Authority within 1 week of commencement of the grouting works.
- 1.14.2 The soil nails shall be installed in each drilled hole prior to grouting. The installation equipment and its operation shall be such as to minimise disturbance of the soil being treated. The maximum deviation of individual soil nails from the required angle of inclination shall be 1 in 30 unless otherwise specified. Each soil nail shall have a maximum departure from the positions shown on the drawings of +/- 50 millimetres.
- 1.14.3 Mixing equipment shall be used that produces a grout of homogenous consistency and shall be capable of providing a continuous supply to the injection equipment. The injection equipment shall be capable of continuous operation at a constant delivery pressure. The injection equipment shall include a system for recirculating the grout during pauses in the grouting operation.
- 1.14.4 Suitable grout testing shall be carried out (flowcone tests, bleed tests, strength tests, refer section 1.9.1 above.)
- 1.14.5 Grouting of drilled holes shall be carried out during withdrawal of the grout tube fixed onto the soil nail, or during the withdrawal of casing using tremie pipes, using hydrostatic,

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions**

gravitational, or pressure grouting. Where pressure grouting is used the grout shall be injected at a pressure not exceeding 15 kilonewtons per square metre in soil and 20 kilonewtons per square metre per metre depth of ground above the hole. Grout shall be injected at the lowest point of the drill hole to ensure that the drill hole is filled without introducing air voids. Grout shall be injected slowly and progressively from the bottom to the top until the hole is completely filled without interruption in the grouting process and clean grout of the same consistency as that injected is seen to run from the top of the hole.

- 1.14.6 For uncased holes, grout pipes shall be fixed to the tendon of the nail to ensure grout cover commences at the lowest end of the nail and grout should be pumped into the hole at a continuous and steady rate, slow enough to prevent entrapping air and to prevent voids forming.
- 1.14.7 Excess quantities of grout should be reported to the Designer to ensure adequate control of grout and prevent grout migration into service ducts, etc.
- 1.14.8 Grouting shall be discontinued if the ambient temperature falls below three degrees Celsius or if the grout temperature falls below five degrees Celsius. When the grout has developed a strength not less than 80 percent of that specified for the 28 day strength, the Contractor shall install the nail head assembly. The small galvanised mild steel (“GMS”) lock-off plate shall be bedded down and the nail tensioned by applying torque that induces a nominal load of 10 kilonewtons. The Company’s programme of operations shall include sufficient time for these requirements prior to further excavation of the slope face.
- 1.14.9 In the case of soil nailed slopes the grout shall fill the hole flush with the slope face. The holes shall be checked after three to five days to check for any grout loss which shall be made good.

**1.15 Damage to Installed Nails**

- 1.15.1 If a soil nail or connection to slope facing or wall is damaged during installation it shall be replaced at the Company’s expense unless otherwise instructed in writing by the Designer.

**1.16 Records**

- 1.16.1 The Company shall keep daily records of the soil nails installed. Copies of these shall be submitted to the Designer within three days following the installation of each soil nail. The records shall show:
- a) date of installation;
  - b) type of bar
  - c) grid and area reference of each soil nail;
  - d) position (chainage and slope length above or below a fixed point or berm), length and inclination of each soil nail;
  - e) length of nail installed into competent strata (based on drillers log observations);
  - f) (date and time of key installation activities (commencing drilling, completing drilling, commencing grouting and completing grouting);
  - g) apparent nature and cause of obstructions (other than drilling in bedrock) and delays including time to resolve;
  - h) grout loss;
  - i) torque force applied to soil nail;
  - j) number and type of tests carried out;

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions**

- k) readings from relevant instrumentation;
- l) relevant calibration certificates; and
- m) soil nail head dimensions and details.

1.16.2 Any unforeseen conditions encountered and reported shall be noted in the records.

**1.17 Testing of soil nails**

1.17.1 Prior to the installation of permanent soil nails, a minimum of six pull-out test nails shall be installed at locations agreed with the Designer and tested accordingly. Pull-out test numbers shall be around three per cent of the total number of working nails, ensuring that all soil types and levels in the slope are tested. In addition, proof testing of permanent nails shall be carried out at a rate of three tests per 100 installed soil nails at locations selected by the Designer and consistent with the progress of soil nailing operations.

1.17.2 Soil nails subjected to pull-out tests shall not form part of the Permanent Works. Any protrusions from the drill hole shall be cut flush with adjacent ground surfaces and the drill hole filled by grouting.

1.17.3 Soil nails shall be subject to the same testing regime whether constructed from solid or hollow thread bar type.

**1.18 Test Equipment**

1.18.1 Displacement measuring gauges that can measure to 0.1 millimetres or better and are mounted on an independent reference frame shall be used to measure movement of the soil nail being tested. The frame shall be securely installed so that readings are not affected by vibration or soil movements. Drilling and other plant movements next to test nails shall be stopped during soil nail testing. The load frame shall ensure that the load is applied in the same direction as the nail and shall not be permitted to within one metre radius of the centre of the drilled hole.

1.18.2 Hydraulic equipment capable of inducing pull-out failure of any selected nail, together with a pressure gauge, calibrated as a unit shall be used to apply the test load. Alternatively the applied load may be monitored utilising a suitably calibrated load cell. The load measuring system shall be capable of measuring the load increments to an accuracy of one percent of the design load or better.

**1.19 Pull-out Testing**

1.19.1 Unless instructed otherwise by the Designer, pull-out test nails are to be tested to 150 per cent of the design working load of the nail or 90 per cent of the ultimate tensile stress of the steel bar, or until pull-out failure occurs, whichever is the lesser. The drill holes shall be formed using water for the pull out test holes and the bar inserted into an open hole, only then should grout be used to grout up the test section of the bond length. Only the bond length or a portion of the bond length shall be grouted. The grouted portion of the test nail can vary, from the lower 2 metres of the bond length to the full bond length as specified by the Designer. The nominal diameter of the drill hole shall be the same as for the permanent soil nails.

1.19.2 The Designer's approval of pull-out test results shall be obtained prior to installation of permanent soil nails for the Works. Unacceptable pull-out test results may result in the need to modify the nail lengths, testing and construction procedure or construction details. Such modifications shall be approved by the Designer and shall require the verification testing procedures to be repeated.

1.19.3 The grouted portion of the test nail shall be grouted in place as part of a regular production grouting process. After grouting, the nail shall not be loaded until the minimum

---

**Appendix 6/10: Ground Anchorages, Crib Walling and Gabions**

required 28 day compressive strength of the grout (40 newtons per square millimetre) has been proven by cube tests.

- 1.19.4 The pull-out tests shall be made by incrementally loading and unloading each nail over three cycles. Test loads shall be applied in accordance with testing pro-forma as proposed by the Company but with the approval of the Designer.
- 1.19.5 Pull-out failure is defined as movement in excess of 0.1 per cent of the tested bond length over the full test period or as confirmed by the designer. Movement shall be checked against possible extension of the steel tendon, movement between steel and grout as well as between grout and soil / rock.

**1.20 Proof Testing**

- 1.20.1 Permanent soil nails selected by the Designer shall be proof tested during the main soil nail works. Unless otherwise specified by the Designer these shall be tested by loading to 1.5 times the design working load or until pull-out failure, whichever is the lesser.
- 1.20.2 The proof testing procedure shall be similar to the requirements of Section 1.19 above for pull-out test nails, with the exception that the nails will be loaded and unloaded for only two cycles.
- 1.20.3 If earlier soil nail proof test results are accepted but subsequent tests fail to meet the acceptance criteria the Company shall inform the Designer without delay. All nails installed subsequent to the last successful test shall be proof load tested and if failed replaced.
- 1.20.4 Nails not meeting the acceptance criteria, or any nails identified by the Company or the Designer as being potentially defective shall be recorded by the Company along with the Company's proposals for treatment. These records shall be forwarded within 24 hours from testing to the Designer for comment.

**1.21 Records of Tests**

- 1.21.1 The Company shall keep records of all soil nail tests carried. Field sheets from soil nail tests shall be provided to the Designer within one hour of completion of each test and final copies of the test results provided within three days. The test records shall describe:-
- a) the date of test;
  - b) the area and location of test;
  - c) the number of tests carried out;
  - d) any variations from the specified procedure;
  - e) details of the test results (including graphical result plots of load against displacement);
  - f) any unforeseen conditions encountered; and
  - g) any test procedure problems and how they will be resolved.
- 1.21.2 Test records shall be presented in the format as specified in the agreed method statement.

**1.22 Temporary Soil Nails**

- 1.22.1 To be completed by the Company.

Part 4: Specification

---

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)****1 Work not Required**

- 1.1 Any Sections in this Appendix which relate to work or materials not required by the Contract shall be deemed not to apply.

**2 General Safety**

- 2.1 The Company shall be aware of the danger from gas which may be present whilst undertaking the New Works at and around any swallow hole or naturally occurring cavity. The Company shall take all possible precautions in this respect including the supply, maintenance and operation, in accordance with the manufacturer's recommendations, of suitable equipment for monitoring the emissions of flammable or noxious gases. The Company shall consult and comply with the requirements of the local authorities on matters relating to the problems and method of treatment of gas which may arise from the presence of any swallow hole or naturally occurring cavity.
- 2.2 The Company shall be aware of the hazards associated with the respective constituent grout materials and take every precaution necessary in the delivery, storage and use of these materials in the Works to protect the health, safety and welfare of person, animals and the environment.
- 2.3 The Company shall provide with their method statement details of the safety measures they propose to implement in order to comply with the requirements of this Appendix. The Company shall take all necessary safety precautions to safeguard their equipment, employees and the public from all risks.
- 2.4 Grouting works shall be carried out in accordance with a detailed method statement, which is to be approved by the Designer. Approval by the Designer shall be sought at least four weeks prior to commencement of drilling the first hole or carrying out associated probe drilling works. The approved method statement shall be forwarded to the Contracting Authority two weeks prior to commencement of drilling. The method statement shall provide details of:
- (a) the proposed layout of the consolidation treatment works including details of the depth to and size of any swallow hole or naturally occurring cavity to be consolidated and angle of drill holes;
  - (b) the method of drilling holes and associated casing requirements and materials;
  - (c) the proposed flush medium and methods for monitoring flush returns and arisings;
  - (d) the proposed drilling plant;
  - (e) method of monitoring for gas;
  - (f) method of mixing, batching and placement of grout;
  - (g) source of grout materials and proposed grout mix design;
  - (h) grout properties including strength, flow properties and bleed capacity;
  - (i) method of testing grout properties;
  - (j) limitation on placement of grout;
  - (k) method of monitoring grouting pressure;
  - (l) maximum allowable grouting pressures;
  - (m) methods of performing pressure injection test holes;

## Part 4: Specification

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

- (n) measures to minimise noise pollution and to prevent flush arising from drilling works and grout spillage running into existing drainage or watercourses;
- (o) form of the daily records and test records; and
- (p) material test certificates and equipment calibration records.

**3 Pollution Control**

- 3.1 The Company shall be aware of the hazards from contaminated water to persons, animals and the environment. The Company shall consult and comply with the requirements of SEPA and the local authorities on matters relating to the hazards from contaminated water, its treatment and disposal. The Company shall take every precaution to contain and dispose of contaminated water, and to prevent contamination of the drainage system and the surrounding environment.
- 3.2 The Company shall be aware of the hazards from grout residues to surface-water courses. The Company shall consult and comply with the requirements of SEPA on matters relating to the hazards from grout residue. The Company shall take every precaution to prevent contamination of surface-water systems and the surrounding environment.
- 3.3 All works shall be carried out without unreasonable noise and disturbance to the site and its environs and shall comply with the noise control requirements of Appendix 1/9.

**4 Services**

- 4.1 The Company shall take every precaution to avoid damage to or interference with apparatus and supplies, whether privately-owned or owned by Statutory Undertakers or local authorities and shall at their own expense rectify any damage done. They shall relieve the Contracting Authority of all claims in respect of any interruption or loss arising from such damage.
- 4.2 The Company shall carry out closed circuit television surveys of the sewers and ducts in the vicinity of the consolidation works before commencement and after completion of the Works.
- 4.3 The survey shall identify the existing condition of the sewers and ducts and their condition upon completion of the grouting works. A written report supported by a copy of the survey on DVD shall be supplied to the Contracting Authority by the Company within 7 days of the completion of each survey. The pre-condition report shall identify any defects within the sewers and ducts and provide proposals to protect them during the grouting works. The post-condition report shall identify any changes in condition of the sewers and ducts since commencement of the grouting works and provide proposals to remedy any defects.
- 4.4 The Company shall remedy any defects or damage to adjacent properties, apparatus and supplies caused by the grouting operations, as determined by the Contracting Authority.

**5 Method**

- 5.1 Where artesian groundwater conditions are encountered measures shall be taken to ensure that no permanent connection / pathway exists between the artesian water source and ground surface.
- 5.2 Drilling, batching, mixing, injecting, testing and the other various operations included in the Works shall be carried out in accordance with this Appendix.

## Part 4: Specification

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

5.3 After the area has been treated, it shall be tested by the sinking of further boreholes to confirm the adequacy of the works. The test procedure contained within this Appendix 6/11 shall then be followed.

**6 Drilling**

6.1 Boreholes shall be drilled by rotary or rotary percussive techniques to intercept the swallow hole or naturally occurring cavity and 1.0 metre below the base level.

6.2 All boreholes shall be cased using steel casing within the drift deposits. The casing shall be sealed at an appropriate depth below any swallow hole or naturally occurring cavity so that there is no loss of grout to any superficial deposits during grout injection.

6.3 All boreholes shall be kept open over their full depth to enable them to be used for the injection of pea gravel. Collapsed or obstructed holes shall be redrilled, including the insertion of casing through the obstruction or zone of unstable / collapsing ground if necessary.

6.4 Where soft, loose or broken strata encountered below any swallow hole or naturally occurring cavity then these strata shall also be consolidated by injecting grout under pressure. If the soft, loose or broken strata have been cased then the casing shall be withdrawn above these strata once the borehole has been grouted and pressurised and the grouting process shall be repeated in accordance with this Appendix.

6.5 Casing shall not be withdrawn until the grouting works are complete in any given borehole.

6.6 Drilling shall not take place within 18 metres of areas that have been grouted within the preceding 24 hours.

**6.7 Perimeter Drilling (Optional)**

6.7.1 If required as part of the Company's design of the Works, vertical and inclined boreholes of 100 millimetres minimum diameter shall be drilled around the perimeter of the area to be consolidated, as required, at not more than 3 metre centres.

6.7.2 Drilling of perimeter boreholes shall commence at the point where the swallow hole or naturally occurring cavity is deepest and shall progress in both directions around the boundary of the grouting works.

**6.8 Infill Drilling**

6.8.1 When infilling the swallow hole or naturally occurring cavity, vertical and inclined boreholes of 50 millimetres minimum diameter, shall be drilled to the Company's grid pattern.

**7 Grouting**

7.1 Immediately prior to grouting each hole, the Company shall check that it is clear of obstructions over its full length and capable of being grouted down to the required grouting depth.

7.2 Grout shall be injected via a steel pipe placed to the bottom of borehole or as otherwise agreed with the Contracting Authority. Injection pressures, measured at ground level, should not exceed the lesser of 10 kilonewtons per square metre per metre of overburden or a maximum pressure of 200 kilonewtons per square metre. If one of these criteria is reached quickly, the grout pipes shall be lifted to check that a local obstruction is not preventing the flow of the grout into the strata. A suitably graduated pressure gauge with

## Part 4: Specification

---

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

an appropriate full scale deflection shall be incorporated within the grout line near the top of the hole. The applied pressure shall be monitored on this gauge, care being taken to reduce any risk of ground heave. The grout pipe is to be raised during progress of injection as limiting pressures are reached or as grout appears at the borehole surface.

- 7.3 As soon as the grout appears at the point of injection, then final pressurisation shall take place using a pressure gauge and grout connection fitted directly to the top of the casing.
- 7.4 During grout testing, limiting pressures shall be used. The use of a lower pressure during grouting and pressurising shall not relieve the Company of the responsibilities laid down in this Appendix relating to testing of treated areas.
- 7.5 The Company shall be responsible for ensuring that no damage to watercourses, existing Structures and existing Public Utilities results from the Grouting Works.
- 7.6 Should the injection pipe become blocked then it shall be removed immediately and cleared.
- 7.7 Immediately before commencing or re-commencing grouting of any borehole the Company shall ensure that it remains open over its full depth and that no collapse has taken place. Where an obstruction is encountered the borehole shall be redrilled and, if necessary, cased through the blockage.
- 7.8 Casing shall not be withdrawn until grouting of any given borehole is complete.
- 7.9 No grout injection shall take place within 18 metres of drilling operations. Infill grouting shall not be carried out until at least seven days have elapsed since the completion of any perimeter boreholes within 10 metres of the proposed infill borehole. Distances shall be measured at the base of the swallow hole or naturally occurring cavity being treated.
- 7.10 Boreholes shall be topped-up to ground level during or immediately after withdrawal of the casing in such a manner as to prevent the overburden collapsing in the hole and to ensure the structure and strength of the grout column. Bores shall be completely filled so that no settlement will occur, or subsequent depression form, in the superficial deposits.
- 7.11 Care shall be taken to ensure that uplift pressures do not develop under any adjacent buildings or structure, including services, during grout injection. Where nearby buildings or structures may be affected by the grouting works, the Company shall take extra care and shall employ special monitoring techniques to record ground movement. Additionally, the Company shall monitor ground levels by precise levelling at intervals, both prior to and during operations.
- 7.12 The Company shall make every effort to remove any metal casing used. If the abandonment of any casing, or part of any casing, is unavoidable then the casing shall be grouted and cut a minimum of two metres below ground level. The location shall be permanently recorded by the Company and details included in the Operations and Maintenance Manuals and other relevant documentation.
- 7.13 **Perimeter Grouting**
- 7.13.1 Grout introduced into the swallow hole or naturally occurring cavity via perimeter boreholes shall be capable of setting quickly without undue spread and in such a way that an efficient barrier is formed around the perimeter of the grouting works. The rate of injection shall be limited to 1.5 tonnes of dry materials per hour per borehole.
- 7.13.2 A maximum of 7 tonnes shall be injected into one hole during any consecutive twelve hour period. In boreholes where cavities in excess of one metre high or interconnecting cavities in excess of 0.5 metres in height are encountered the Company will be required

## Part 4: Specification

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

to simultaneously place pea gravel with the grout in the ratio 1:1 by weight using an approved hopper device. Consideration shall be given in the design to the addition of a thixotropic or accelerating agent.

**7.14 Infill Grouting**

7.14.1 For infill holes injection is to be carried out in such a way that all the swallow hole or naturally occurring cavity underlying the Site, together with all spaces, breaks and fissures therein, are completely and tightly filled with grout.

7.14.2 If the limiting pressure is not achieved or grout has not appeared at the point of injection after 15 tonnes of grout materials have been placed, the grout tube or pipe shall be removed from the hole and the injection suspended. After a period of at least 12 hours, up to a further 10 tonnes of materials shall be injected. If grout has still not surfaced up the bore, injection shall again be suspended for at least 12 hours and the process shall be repeated with further quantities of 5 tonnes. If the hole is still accepting grout after a total of 50 tonnes of materials have been injected without any sign of the hole being completed the Company shall consult the Designer to determine whether the injection is to be continued or other measures, such as secondary or test holes are required.

7.14.3 Final tightening of each borehole shall be carried out by pumping an approved grout at a pressure, measured by a gauge at ground level, that should not exceed the lesser of 10 kilonewtons per square metre per metre of overburden or a maximum pressure of 200 kilonewtons per square metre.

**8 Grout Mixing, Batching and Pumping Plant**

8.1 The grout mixer shall be capable of producing a homogenous mix with all particles thoroughly wetted and with no segregation.

8.2 It is essential that the mixer is fitted with a reliable automatic weigh batching device capable of consistently measuring the weight of component materials in the approved proportions.

8.3 Water supply to the mix shall be properly monitored by means of a suitable metering device incorporated in the mixer in order to ensure accurate control of the mixing water fed into each batch of dry materials.

8.4 After mixing the grout shall be fed into storage tanks fitted with powered agitators sufficient to ensure that no segregation of component materials occurs and that a continuous flow of grout is maintained at the insertion point.

8.5 Injection of the pre-mixed grouts shall be by means of positive displacement pumps and suitable pressure gauges shall be incorporated in the system to facilitate control of pressures.

8.6 Three valves shall be provided at each junction point to provide means for diversion of the grout away from the injection point when necessary and to prevent undue wastage of grout during transfer of the delivery line from one injection point to another.

8.7 The Company shall include within the relevant method statement details of the proposed methods of all New Works.

**9 Grout materials**

9.1 Cement shall be ordinary Portland cement and shall comply with British Standard Specification BS EN 197 having a compressive strength class (Table 2) of 42.5 newtons

## Part 4: Specification

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

per square millimetre or greater. The cement shall be suitably stored to prevent damage from the weather.

- 9.2 Sand for grouting shall comply with the requirements of BS EN 12620 and be of a suitable grading suitable for use in the Company's plant.
- 9.3 Pulverised fuel ash ("PFA") shall be fine grained complying with BS 3892: Part 3 Specification for PFA for use in grouts, be of a type suitable as a constituent for grout, meet grout workability and pumpability requirements and obtained from an approved supplier. PFA in storage shall be protected by tarpaulins, other covering or stored in a suitable container to prevent contamination with dust, protect the material from the effects of weather and prevent it becoming an airborne hazard.
- 9.4 Pea gravel shall be single sized 10 millimetres natural gravel and comply with requirements of BS EN 12620.
- 9.5 Bentonite shall be Fulbent 570 as supplied by the Fuller's Earth Contractor Limited, or approved equivalent.
- 9.6 Water:
- (a) All water used in the Works shall be clean, fresh water, free from impurities and obtained from a public water supply.
  - (b) The Company shall pay the appropriate charges for water and shall make all arrangements to ensure a proper and sufficient supply for the duration of the Contract. A hydrant connection will not be accepted.
- 9.7 All mixes shall be appropriate for the groundwater conditions and groundwater chemistry encountered in the swallow hole or naturally occurring cavity.
- 9.8 The Company shall conduct moisture content and grading tests on materials supplied to the Site and shall provide the Contracting Authority with copies of the results of these tests. The frequency and the results of these tests shall be verified for compliance with the design before any grouting is commenced.
- 9.9 All materials shall be kept free from contamination with deleterious matter. Stockpiles of materials shall be kept adequately separated from one another
- 9.10 Unless otherwise directed, all materials shall be in accordance with the appropriate Clauses of the most recent applicable British Standard (or other) and all workmanship shall be in accordance with the appropriate Clause of the most recent British Standard Code of Practice (or other).

**10 Grout Mixes**

- 10.1 The Company shall check for each proposed grout mix that 7, 14 and 28 day cube strength test results and flow test results comply with the design of the Works.
- 10.2 The minimum 28 day crushing strength shall be 1 meganewton per square metre.
- 10.3 All grout used in connection with the Contract shall contain cement.
- 10.4 Grout introduced at the perimeter probe hole locations shall have a cement content of between 120 and 150 kilograms per cubic metre of mixed volume.
- 10.5 Grout introduced at infill hole locations shall have a cement content of between 80 and 100 kilograms per cubic metre of mixed volume.

## Part 4: Specification

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

- 10.6 Using a "Colcrete" Flowmeter the following criteria shall apply with regard to grout flow properties.
- (a) Perimeter and additional probe grout shall flow within the limits 300 millimetres to 400 millimetres.
  - (b) Infill grout shall flow within the limits 400 millimetres to 600 millimetres.
- 10.7 The Company shall undertake testing of grout mix proportions and materials. Results of these tests shall be verified for compliance with the design before any grouting is commenced.

**11 Grout Tests**

- 11.1 Throughout the course of grouting works the Company shall take cubes with 100 millimetre sides in sets of six at the rate of one set per day. The cubes shall be cured and crushed at a UKAS accredited laboratory. The cubes shall be uplifted and transported to the laboratory within 36 hours of their casting. One cube shall be crushed at 7 days, one at 14 days and two at 28 days. The test will be taken as conforming if both 28 day strengths exceed the minimum requirement contained in this Appendix. The Company shall permanently and clearly mark cubes for identification, and shall keep records which shall indicate exactly the location of the grout or concrete, the flow test readings of the mix, the date of placing and mix reference. The marking of cubes, handling, storage and testing shall be in accordance with BS 1881.
- 11.2 The Company shall test the flow properties of each batch of mixed grout in accordance with this Appendix relating to grout mixes before it is injected and shall carry out such additional random tests as may be required to ensure compliance with the design of the Works.

**12 Testing of Infilled Grout**

- 12.1 On completion of the grouting works the Company shall sink probe test holes into the filled swallow hole or naturally occurring cavity and shall carry out grout injection tests to establish the adequacy of the works already completed. The Company shall provide details of numbers and locations of test holes to be undertaken to the Contracting Authority. Testing shall not be undertaken until a minimum of 48 hours has elapsed since the completion of treatment in the area to be tested.
- 12.2 These tests shall consist of injecting grout into the test holes in the normal fashion and noting the quantity required to produce an injection pressure of 200 kilonewtons per square metre or such lower pressure as specified in the design of the Works. When this injection pressure has been reached the injection pump shall be switched off and a suitable valve at the top of the hole closed to isolate any line pressure. The test shall be deemed successful where the quantity of grout injected is less than 0.5 tonnes or such higher quantity as specified in the design and where the pressure has not dropped by more than 10 per cent in three minutes.
- 12.3 The Company shall ensure that a good seal is maintained during the test.
- 12.4 The Designer may in addition require core samples to be taken by rotary coring to check the adequacy of the grouting operation. Rotary coring shall be carried out in accordance with the MCHW, Volume 5, Section 3, Part 4.
- 12.5 Should any of the tests reveal incomplete grouting works or other defect, the Company shall make good such works in order to comply with the requirements of the Contract.

## Part 4: Specification

---

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)****13 Cold Weather**

- 13.1 When the temperature of the air is near or below the freezing point of water, grouting works shall only be permitted at the entire risk of the Company, who shall take precautions to ensure that the materials are free from frost and to protect the grout or concrete from freezing.
- 13.2 The Company shall make good any works which may be damaged by frost. For the purpose of recording the air temperature a reliable maximum / minimum thermometer is to be located on the New Works Site. Precautions against cold weather conditions shall be such as to ensure that the grout shall, at no time during mixing, depositing, delivery to a point of injection or setting reach a temperature of, or below, five degrees Celsius.
- 13.3 The Company shall be deemed to have included for all measures necessary to comply with the aforementioned requirements.

**14 Records**

- 14.1 The Company shall prepare a daily drilling journal and a separate daily grouting record for individual boreholes including test boreholes, providing the information in Section 14.2 below and this shall be provided to the Contracting Authority the day after the date the records relate to.
- 14.2 Daily drilling journals shall include:
- (a) job name, location, borehole reference number and date;
  - (b) O.D. level at borehole location;
  - (c) date;
  - (d) contractors name;
  - (e) staging level - embankment boreholes;
  - (f) inclination of borehole;
  - (g) plant in use, type of flush and crew details;
  - (h) method of boring or drilling, flushing medium and type of drill bit;
  - (i) type / diameter and depth of all casing used;
  - (j) diameter and depth of hole at beginning and end of each working day/shift;
  - (k) depth of each change of stratum;
  - (l) rate of penetration;
  - (m) details of any loss of flush;
  - (n) occurrence of voided, soft or broken ground;
  - (o) delays, breakdowns and / or obstructions with accompanying reason;
  - (p) details of underground services or drains located;
  - (q) daily and cumulative length drilled;
  - (r) details of any settlement or ground heave;
  - (s) description, with identification of the stratum and whether it is broken or intact;
  - (t) depth at which groundwater is encountered (if apparent);

## Part 4: Specification

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occurring Cavities and Disused Mineworkings)**

- (u) depth / description of any contaminated material or groundwater encountered;
- (v) details of any emission of gas, water, foul air etc.;
- (w) depth of completed hole; and
- (x) gas monitoring results.

## 14.3 Grouting records shall include:

- (a) location and borehole reference number;
- (b) contractors name;
- (c) date and times of grouting and grout crew details;
- (d) details of type of injection and grout line dimensions (e.g. tremmie injection through 5 millimetre diameter line);
- (e) grout materials employed;
- (f) grout pressures recorded, with the corresponding depths;
- (g) weight of grout mix accepted including the water / cement ratio and weights of the constituent components of the mix;
- (h) the accurate position, inclination and orientation of abandoned casing; and
- (i) delays and breakdowns with accompanying reason.

14.4 All daily drilling journals and grouting records shall be included in the as-constructed records.

14.5 The Company shall within three months of completion of the grouting works prepare typical drawings and sections to indicate where and how much grout was placed. It shall prepare a report on the grouting works outlining the conditions encountered and the final treatment carried out. A copy of this report shall be included in the as-constructed records.

**15 Setting Out and Labelling**

15.1 For ease of reference, each borehole used in the grouting works shall be clearly marked on the Site with its reference number, depth and inclination. This labelling shall remain legible until the casing has been withdrawn and the bore is complete.

15.2 Setting out stations and reference lines used in the location of borehole positions shall be established on the New Works Site by means of permanent markers, clearly visible at all times.

15.3 A system shall be employed to record those boreholes which are completed and those which continue to accept grout. This system shall operate both at the borehole and in the Company's office.

**16 Personnel for Grouting Works**

16.1 The Company, Designer and the Checker shall employ personnel who have relevant experience of grouting works.

16.2 The Company and the Designer shall have in charge of the grouting works a suitable number of engineer(s) experienced in the methods being employed and the said engineer(s) shall be present at the Site at all times when drilling, grouting or testing is in progress.

**Appendix 6/11: Grouting Works (Swallow Holes and Other Naturally Occuring Cavities and Disused Mineworkings)****17 Waste Management (Pulverised Fuel Ash)**

- 17.1 The Company is responsible for supplying appropriate grout constituent materials.
- 17.2 PFA, a typical constituent of grout, is now regarded by the Environment Agency to be a waste material and, accordingly, its use in these sorts of works comes under the various waste management regulations and legislation.
- 17.3 If the Company proposes to use PFA in the New Works then he will be responsible for discharging any liabilities and responsibilities in this respect and shall indemnify the Contracting Authority against any associated claims.
- 17.4 Copies of relevant correspondence, licences, permits and similar that may be required to discharge these responsibilities are to be copied to the Contracting Authority before use of PFA will be permitted.
- 17.5 As an alternative to using PFA, a suitable substitute material, or pre-bagged product may be used in the New Works, subject to approval by the Designer.

## Part 4: Specification

**Appendix 6/12: Instrumentation and Monitoring****1 Instrumentation and Monitoring**

- 1.1 This Appendix sets out the minimum instrumentation and monitoring requirements for the Works. The Company shall amend the Appendix to reflect any additional monitoring proposed.
- 1.2 The Designer shall design a geotechnical instrumentation and monitoring scheme appropriate for his design incorporating the following minimum requirements:

| <b>Instrument Type</b>     | <b>Minimum Requirement</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Surface Movement Peg (SMP) | As specified by the Designer.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Inclinometer (INC)         | As specified by the Designer                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                            | Inclinometers shall be installed by a specialist geotechnical instrument contractor and shall be industry standard kit suitable for monitoring slope instability movements. Inclinometer installations shall extend a minimum length of two metres into competent bedrock.                                                                                                                                                                                                            |
| Piezometers (PZ)           | As specified by the Designer                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                            | The design and installation of piezometers shall be suitable to monitor groundwater levels within the deposits in which they are installed.                                                                                                                                                                                                                                                                                                                                           |
| Standpipes (SP)            | Existing installations are to be monitored for gas / groundwater level as required by the Company.<br><br>Monitoring of groundwater levels immediately adjacent to Network Rail, BP and Shell properties and any associated adjacent properties shall be undertaken throughout the construction period. The Designer shall specify the location of instrumentation to comply with this requirement.<br><br>Other standpipe monitoring requirements to be as specified by the Designer |
|                            | The design and installation of standpipes shall be suitable to allow for monitoring of groundwater levels and sampling of groundwater, within the deposits in which they are installed.<br><br>All monitoring standpipes shall have dedicated sampling equipment installed for long term groundwater sampling.                                                                                                                                                                        |
| Other Instrumentation      | As specified by the Designer                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Part 4: Specification

**Appendix 6/12: Instrumentation and Monitoring**

- 1.3 All instruments shall be numbered and labelled by type, mainline chainage and offset from the proposed alignment centreline. For example, surface movement pegs at chainage 200.00 metres off-set to the right and to the left of the proposed alignment centreline by 20 metres would be labelled as SMP 200/+20 and SMP 200/-20 respectively.
- 1.4 All instruments shall be installed by the Company prior to construction at any specific location and shall be surveyed by the Company to provide X, Y, Z co-ordinates for each station to an accuracy of +/-2 millimetres.
- 1.5 The Company shall calibrate and monitor all instruments for baseline readings at least two weeks ahead of adjacent or overlying construction during which the Company shall take three sets of base readings. The results shall be provided to the Designer to confirm that all readings are repeatable before adjacent Works are commenced.
- 1.6 All monitoring stations shall be clearly marked with a unique reference number as above. The Company shall ensure that all instruments are protected from damage during installation and construction operations. As appropriate on completion of installation the Company shall provide / erect temporary surface protection of the instruments so that damage by site traffic or other plant does not occur.
- 1.7 Monitoring instruments shall be read as a minimum requirement to the frequency and accuracy indicated in the following table:

| <b>Instrument</b>             | <b>Location</b>              | <b>Frequency of reading</b>                                               | <b>Accuracy</b>                                                              |
|-------------------------------|------------------------------|---------------------------------------------------------------------------|------------------------------------------------------------------------------|
| Sub-formation Movement Points | As specified by the Designer | As specified by the Designer                                              | As specified by the Designer                                                 |
| Surface Movement Points       | As specified by the Designer | As specified by the Designer                                              | As specified by the Designer                                                 |
| Inclinometer                  | As specified by the Designer | As specified by the Designer                                              | +/- 1 millimetres or greater accuracy as specified by the Designer           |
| Piezometer                    | As specified by the Designer | Minimum, monthly, or any increased frequency as specified by the Designer | +/- 10 millimetres maximum, or greater accuracy as specified by the Designer |
| Standpipes                    | As specified by the Designer | Minimum, monthly, or any increased frequency as specified by the Designer | +/- 10 millimetres maximum, or greater accuracy as specified by the Designer |
| Other instrumentation         | As specified by the Designer | As specified by the Designer                                              | As specified by the Designer                                                 |

**Appendix 6/12: Instrumentation and Monitoring**

- 1.8 Monitoring shall be undertaken throughout the duration of the Works or until a time agreed with the Designer. In the case of surface movement monitoring this is likely to be when negligible movement has been demonstrated following the completion of adjacent earthwork activities.
- 1.9 In the case of surface movement monitoring points and inclinometers any changes in position or level beyond the required accuracy tolerances set out in the above table shall be reported immediately to the Designer.
- 1.10 The results of all monitoring shall be reviewed by the Designer not more than 24hrs after readings are taken. The Company shall make available the results of all monitoring data to the Designer in digital (Excel Spreadsheet) format and also as a graphical plot (Excel Format) such that changes with time are apparent. The exact format of the presentation of results is to be agreed with the Designer. Following each measurement, the Company shall update the database and graphical output immediately.
- 1.11 All monitoring data shall be made available to the Contracting Authority as and when requested.

**Appendix 12/1: Traffic Signs: General****1 Traffic Signs – General**

- 1.1 As part of the New Works the Company shall erect appropriate signage for existing tourist destinations which are currently signed on the road network.

**Appendix 12/2: Traffic Signed – Marker Posts****1 Hazard Marker Posts**

- 1.1 Hazard marker posts shall be capable of being overrun by vehicles so that they deflect and spring back to an upright position without shattering in all weather conditions and with little or no vehicular damage.
- 1.2 Hazard marker posts shall be fitted with anti-removal tabs below the ground
- 1.3 The reflectors shall be of Class 1 retro reflective sheet material to comply with Diagram 561 of Traffic Signs Regulations and General Directions 1994. The retro reflective sheeting shall be protected from damage from over-running vehicles by raised edges or other acceptable methods.
- 1.4 The hazard marker post shall have the main body self-coloured black with a highly visible weather resistant white band to the sizes quoted in Figure 4.84 in Chapter 4 of the Traffic Signs Manual.
- 1.5 The top of the hazard marker post shall be installed so that the top of the post is 750mm-1000mm above ground level.

## Appendix 12/3: Traffic Signs – Road Markings and Studs

### 1 Road Markings

- 1.1 The colour location and material type for permanent or temporary road markings shall be specified as part of an order for road marking.
- 1.2 Ribbed road markings shall be formed of hot applied thermoplastic formulated to allow the formation of transverse ribs. The transverse ribs shall not be less than 8mm and not greater than 10mm in depth and shall be at 500mm spacing except on slip roads where the spacing shall be reduced to 250mm.
- 1.3 All road markings shall provide a skid resistance level of 55.
- 1.4 Temporary road markings shall be laid in accordance with BSI document BS 6518 1985.
- 1.5 Where existing road markings shall be required to be covered over the cover application shall comply with BS 7962: 2000.

### 2 Road Studs

#### 2.1 General Requirements

- 2.1.1 Any road stud which has become displaced from its socket or is loose or broken shall be removed from the carriageway immediately and the resulting socket shall be filled with bituminous instant repair material as described in Clause 970AR.
- 2.1.2 Replacement road studs shall not be installed in old sockets. New road studs shall be placed in new sockets with a clearance of at least 300mm from the original sockets. Existing or refurbished road stud sockets may be re-used but in all cases shall be fitted with new inserts.
- 2.1.3 Road studs inserts shall be replaced when failing to meet the requirements of Schedule 2 to the Agreement.
- 2.1.4 Road studs to be used for this Agreement shall be as noted below.

#### 2.2 Red White and Green Studs

- 2.2.1 All red white and green studs shall comply with Clause 1213.3. Red and green reflectors shall be uni-directional. White reflectors shall be bi-directional.
- 2.2.2 Where installation of road studs shall be the subject of a traffic regulation order at new locations Method No 1 as detailed in Paving Instruction 1984 Edition (Red) shall be used. This shall be Installation Method No 1.

#### 2.3 Amber Studs

- 2.3.1 Amber studs shall be of the corner-cube reflection type and shall be fixed in accordance with the manufacturer's written recommendations. (Installation Method No 4)

#### 2.4 Temporary Road Marking Studs shall be either

- 2.4.1 Hot melt adhesive type.
- 2.4.2 Self-adhesive type.
- 2.4.3 Fixing of studs shall be in accordance with manufacturer's written recommendations with respect to whether the studs shall be fixed to existing or new surfacing.

#### 2.5 Existing metal CHART node studs

- 2.5.1 Existing metal CHART node studs shall be removed to ensure minimum damage to carriageway. Reinstatement shall be carried out using filled bitumen or bituminous instant repair material.

**Appendix 12/3: Traffic Signs – Road Markings and Studs****2.6 Cored thermoplastic road markers to be installed as CHART node points**

- 2.6.1 Cored thermoplastic road markers to be installed as CHART node points shall use the following method (Method No 5)
- (i) a 100mm diameter x 20mm deep pocket shall be formed using a central pilot bit surrounded by an annular bit;
  - (ii) the base of the pocket after breaking out the surfacing material shall be left jagged.
- 2.6.2 The pocket shall be filled with hot thermoplastic material to the uppermost edge of the pocket projecting slightly above the road surface and the material allowed to cool and set to form a stud.
- 2.6.3 The material shall consist of a plastic resin with white filler and reflective glass particles to BS 3262.

## Appendix 12/5: Traffic Signs – Traffic Signals

### 1 Permanent Traffic Signals

- 1.1 All traffic signal equipment supplied must be of a type approved by the Contracting Authority and comply with the latest edition of the relevant British Standards, TR Specifications, The Traffic Signs Regulations and General Directions, The Zebra, Pelican and Puffin Pedestrian Crossing Regulations and General Directions and IEE Wiring and “Electricity at Work” Regulations. The Design and method of maintenance must meet the above regulations.
- 1.2 Statutory Approvals must be in place for all traffic signs and signals (including associated control equipment) and copies of letter of acceptance must be submitted to the Contracting Authority prior to construction.
- 1.3 All lanterns, including nearside red man/green man lanterns, must be compatible with the proposed controller for fault monitoring, including full red lamp monitoring for installations with controlled pedestrian facilities.
- 1.4 Where required in the Contract to supply and install traffic signal heads and other traffic signal equipment, the Company shall provide equipment complying with the following requirements:
- 1.5 **Signal Heads**
- 1.5.1 Traffic Signal heads shall conform to TR2206 Specification of Road Traffic Signals, BS EN 12368 Traffic Control Equipment, Signal Heads, BS EN 50556 Road Traffic Signal Systems.
- 1.5.2 LED Signal Heads
- Aspect Types:- 200 mm diameter red, yellow and green roundels. 200 mm green left, right and straight on arrows.
- Signal heads shall comply with the following BS EN 12368 Classes:
- Optical Characteristics:- Luminous Intensity Class 3/2  
Luminous Distribution Table 4  
Phantom Class 5  
Colour (inc. combined Colour) Compliant  
Luminance Uniformity =1:10
- 1.5.3 LED Pedestrian Heads
- Aspect Types:- 200 mm diameter red and green pedestrian symbols.
- Signal heads shall comply with the following BS EN 12368 Classes:
- Optical Characteristics:- Luminous Intensity Class 3/2  
Luminous Distribution Table 4  
Phantom Class 5  
Colour (inc. combined Colour) Compliant  
Luminance Uniformity =1:10

## Part 4: Specification

---

**Appendix 12/5: Traffic Signs – Traffic Signals****1.5.4 Push Button**

Operating Voltage:- All push buttons for pedestrian lights shall operate on a low voltage, 48 V, 40 W supply.

Push Buttons shall incorporate a “tactile cone” indicator at the base of the unit. (A tactile cone indicator serves to assist visually impaired pedestrians in identifying when it is safe to use a pedestrian crossing, by rotating when the pedestrian phase is in operation)

**1.6 Nearside Units for Puffin and Toucan & Demand Units**

1.6.1 Nearside units will comply with the latest version of TR2511 Performance specification for Nearside Signal and Demand Units.

1.6.2 All nearside and demand units must be installed in accordance with the manufactures instructions.

1.6.3 Nearside and demand units will be aligned in accordance with the approved site specific traffic signal drawings.

1.6.4 Demand units shall incorporate a “tactile cone” indicator at the base of the unit. (A tactile cone indicator serves to assist visually impaired pedestrians in identifying when it is safe to use a pedestrian crossing, by rotating when the pedestrian phase is in operation).

**1.7 Tactile Equipment**

1.7.1 Tactile cones and associated equipment will comply with the latest version of TR2508 Performance Specification for Tactile Equipment for use at Pedestrian Crossings.

**1.8 Audible Equipment**

1.8.1 Where it is proposed to install Audible units they shall comply with the latest version of TR2509 Performance Specification for Audible Equipment for use at Pedestrian Crossings.

**1.9 Traffic Signal Controller Cabinets**

1.9.1 Foundations for traffic signal controller cabinets shall be located in positions such that when the access doors of the installed cabinet are in the open position they cause minimal obstruction of the footway. It shall be possible to open the access doors fully and consideration must be given to the safety of operatives and Non-Motorised Units during maintenance operations. If it is necessary to site the cabinet adjacent to the kerb then it shall not be possible for the access doors to be opened over the carriageway and the cabinet shall be sited at least 0.5m from the kerb edge.

1.9.2 The cabinet shall be positioned so that it does not obstruct the view of pedestrians waiting at traffic signal controlled crossings or motorists on their approach to the crossing. Where ever possible, the cabinet shall be sited at the downstream side of signal controlled pedestrian crossings. Cabinets shall be positioned such that a traffic engineer can view the operation of the signals whilst standing at the front of the cabinet.

1.9.3 Case root base cabinets shall have the root located on one or more paving slabs which are themselves securely bedded and properly levelled at the appropriate depth. A bed of ST4 concrete shall be laid over the base of the root and paving slab(s). The top of the bed, when finished, shall be 1/3 of the way up the legs of the root and the site of the bed smoothed. That part of the excavation within the case root shall be back filled with compacted dry fine sand or pea gravel and topped with dry fine sand after the ducting has been installed and the cables have been terminated. The remainder of the excavation

## Part 4: Specification

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

around the cabinet is to be backfilled with cement bound material to base course level and the surrounding area reinstated in accordance with the requirements of Clause 706 of the Specification.

- 1.9.4 A layer of epoxy resin 6 mm thick is to be laid on top of the sand to prevent ingress of gas and moisture into the cabinet through the root and to provide a seal with the case.
- 1.9.5 Pole mounted cabinets are to be mounted on poles correctly aligned in vertical positions. The excavation shall be adequate to allow the pole to be planted to the depth recommended by the manufacturer, typically 650 mm. The bottom of the hole around the pole is to be filled with at least 300mm of ST4 concrete to the bottom of the cable entry slot. When cable laying and testing is complete, the remainder of the backfilling shall be completed. The cable entry to the cabinet shall be effectively sealed against ingress of moisture into the unit.
- 1.9.6 Once the electronic modules are installed in the cabinet, the door seals and locks shall be checked and the base sealed as soon as possible to stop any moisture ingress to the modules.
- 1.9.7 When a cabinet is mounted on a verge of unmade ground a concrete pad, which may consist of paving slabs, shall be laid around the controller to a minimum width of not less than one metre on those sides to which access to the equipment is required.
- 1.9.8 All controllers and auxiliary cabinets shall be supplied with a metal case with a hinged main access door, with locking facilities.
- 1.9.9 Cabinets shall be IP55 rating.

**1.10 Controller Equipment**

- 1.10.1 The Company shall ensure that all controllers are fully UTMC compliant allowing fault monitoring equipment such as an Outstation Monitoring Unit (O.M.U), Outstation Transmission Unit (O.T.U) or MOVA Unit to be supplied by any manufacturer.
- 1.10.2 The Company shall install an Outstation Monitoring Unit (OMU) or Outstation Transmission Unit (O.T.U) of a type approved by the Overseeing Organisation.
- 1.10.3 The Company will install a MOVA unit in the controller at locations agreed with the Overseeing Organisation.
- 1.10.4 ELV and LV controllers will conform to the latest version of TR2500 Specification for Traffic Signal Controller and BS EN 12675 Traffic Signal Controller Functional Safety Requirements.

**1.11 Traffic Signal Poles**

- 1.11.1 The Company shall comply with DMRB Volume 8 Section 2 Part 2 TA 89/08 Use of Passively Safe Signposts, Lighting Columns and Traffic Signal Posts to BS EN 12767.
- 1.11.2 The Company shall be responsible for specifying which performance class is required.
- 1.11.3 All poles shall be installed in accordance with the manufacturer's recommendations, or as otherwise instructed by the Overseeing Organisation.
- 1.11.4 Poles shall NOT be supplied with pre drilled holes for nearside and demand units.
- 1.11.5 All poles shall numbered in accordance with the numbering system used on the site specific drawings with appropriate labels, labels to be approved by the Overseeing Organisation.

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

- 1.11.6 All poles shall be numbered on the footway side at right angles to the traffic lantern brackets and immediately below the top cap; where all lantern fixings are allocated the numbering shall be placed below the bottom fixing bracket.
- 1.11.7 The areas of the pole on which the labels are to be impressed shall be cleaned/degreased before application.
- 1.11.8 The Company's proposed pole retention system shall be subject to the approval of the Overseeing Organisation. The retention system shall be of cast iron design and shall incorporate a pole locking system contained within an integral locking chamber. The design shall allow the pole to be aligned in any orientation with the cable installed, prior to the locking device being activated. The design shall not allow signal poles to rotate once fixed in position. Sockets shall be installed flush with the final surface. Flush sealing plugs shall be available for use when the signal pole is not present. The proposed system shall be adaptable to allow for a minimum insertion depth of 300 mm. The design of the pole retention system shall incorporate appropriate features to accommodate easy installation and replacement of signal poles and cables. The sockets and poles shall be installed in accordance with the manufacturer's instructions.
- 1.12 **Electrical Disconnection Equipment for Passively Safe Traffic Signal Poles**
- 1.12.1 The system must comply with BS EN12767 (Disconnection of Roadside Structures within 0.4ms of Impact).
- 1.12.2 The system shall be housed within a suitably sized cabinet to house all isolation equipment, such as circuit breakers and monitoring units. This cabinet will be located alongside the signal controller cabinet.
- 1.12.3 The system shall include a self-checking system, with an output to indicate system malfunction.
- 1.12.4 In normal operation the system must give a visual indication that it is operational, heartbeat or similar.
- 1.12.5 If the system is activated it must provide a positive visual indication of this and also indicate the location.
- 1.12.6 The isolation will be so designed that on impact all LV and ELV live and neutral circuit conductors are disconnected from the signal pole, together with any sensor voltages.
- 1.12.7 It must not be possible to re-energise a circuit that has been tripped.
- 1.12.8 The system will provide outputs to indicate a) Activation by impact, b) Activation by signal equipment fault, c) Isolation system malfunction and d) Isolation system power failure.
- 1.12.9 The isolation system must also be capable of isolating a whole signal pole due to a signal equipment fault; this facility is to be switchable by pole.
- 1.12.10 The sensors are to be mounted by the most appropriate means, ideally behind the base door if available. The location shall be agreed with the Overseeing Organisation before fitting.
- 1.12.11 The cabling to the sensors is to be run in separate ducts to LV cables, using orange PVC sheathed SWA 2 core 2.5mm cable, traffic signal loop feeder cable.
- 1.12.12 The sensor cable is to be terminated using a CET cable gland or equivalent, with the armouring being taken to Earth.
- 1.12.13 Sensors are to be IP64 rated for mounting in the structure. The sensor must provide a means of testing the system operation during commissioning and routine maintenance.

## Part 4: Specification

---

**Appendix 12/5: Traffic Signs – Traffic Signals****1.13 Duct Systems**

- 1.13.1 Duct links between chambers and individual signal poles or equipment cabinets shall provide the appropriate number of ducts to accommodate the number of cables required to service the item. The layout shall be such that any tactile paving area is kept free of inspection chambers.
- 1.13.2 All duct work provided by the Company between Traffic Signal controllers and Traffic Signal poles or other equipment shall form a continuous route.
- 1.13.3 Traffic signal, communication, power and loop detector ducts and duct accessories shall comply with the latest version of BS EN 61386 - 24 and be orange in colour. All ducts, unless otherwise specified, shall be thick walled (5mm) high density polyethylene. The ducts shall be smooth walled (inner and outer) with a nominal internal diameter of 100mm unless otherwise stated and coloured orange with the words "Traffic Signals" printed in white along their length at intervals of not more than one metre. When laid, the wording shall be displayed uppermost. All lengths shall be jointed or sleeved. Spurs to signal poles shall generally be 100mm in diameter.
- 1.13.4 Telecommunication Service Provider's ducts and duct accessories shall comply with BS EN 61386 - 24 and be black in colour. Ducts shall comprise a high density polythene twin walled (inner wall smooth, outer wall corrugated) system with an internal diameter of 100mm and unit lengths of 6.0 metres. Every length shall be supplied with a push-fit coupler.
- 1.13.5 The Mechanical Properties of the ducts shall be that associated with "Normal Duty". For Resistance to Bending, both rigid and pliable ducts are acceptable provided that the ducting requirements of the particular installation are met and that the correct accessories are used. The category for Protection against Ingress shall be a minimum of IP 30 and the Resistance to Chemical Attack classification shall be "With Protection".
- 1.13.6 Yellow PVC marker tape, with the wording "CAUTION ELECTRICITY DUCT BELOW" printed along its full length so as to occupy not less than 75% of its available length and occurring at a minimum of 1.0 metre intervals, shall be laid 250mm above all duct-lines. The tape shall be a minimum of 150mm wide and 0.1mm thick.
- 1.13.7 Where normal cover to communication ducts for traffic signals cannot be obtained, e.g. on structures or due to underground obstructions such as concrete road foundation slabs, 32mm internal diameter galvanised steel pipes may be laid at shallow depth, with couplings and joints complying with the latest Version of BS 1387 Class H, all as directed by the Overseeing Organisation.
- 1.13.8 All service ducts shall be fitted with a draw rope in accordance with Clause 501.8. The rope shall extend at least 3.0 metres from each end of the duct and this length of rope shall be tidily looped and either tied to the draw rope of a parallel duct or secured to a marker block when no adjacent duct is available. In either case, unless ducts terminate at cabinets, mounting posts, columns or main duct chambers, their ends shall be marked with marker blocks or marker posts as detailed in HCD I1. Immediately after laying, ducts shall be sealed with removable split or solid plugs which can accommodate the specified draw rope.
- 1.13.9 A secondary draw cord shall be installed following any cable installation such that a serviceable cord is available at all times.

**1.14 Access Chambers**

- 1.14.1 Access chambers, installed in footpaths and verges, shall comprise proprietary high density polyethylene segmental chambers with pre-formed "knockout" duct accesses.

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

Chambers shall be twin walled, be capable of withstanding a 12.5 tonne wheel load and shall have a 150mm thick Class ST4 concrete surround. Chambers shall typically have a clear opening of 600 mm x 600 mm.

- 1.14.2 Chamber covers and frames shall comply with the requirements of BS EN 124:1994 and be Class B125 in footways and Class D400 in carriageways, hardshoulders and hard standings. Chamber covers for footways shall be manufactured from a high strength polyester composite material and shall be located in a 2.5mm thick galvanized steel frame which will allow height and tilt adjustment.
- 1.14.3 Chamber covers shall provide skid resistance greater than the minimum advisory limits.
- 1.14.4 Frames for chamber covers in footways shall be set in designation (i) cement mortar or a proprietary quick setting mortar of equivalent strength. The use of any quick setting mortar shall be subject to the approval of the Overseeing Organisation prior to use. Frames for chamber covers in the carriageway shall be set in epoxy mortar. All new, adjusted and replaced chamber frames and covers shall be set flush with the surrounding surface in hard landscaped, footway and carriageway areas. In soft verge chamber cover level shall be 25 mm above finished level. The finished thickness of the mortar bed to the frame shall be between 10 and 25 mm. Any additional adjustments beyond this shall be achieved by modifying the chamber structure or by using a frame of a suitable depth in accordance with Clause 507.18 of the Specification.
- 1.14.5 Horizontal and vertical alignment of the ducts shall be such that cables may be pulled directly through the chambers.
- 1.14.6 Ends of ducts shall protrude 25 mm through the inside of the chamber wall.
- 1.14.7 Chamber covers shall be clearly identified by the legend of the Overseeing Organisation such as "GCC-TS" or "SLC-TS" as appropriate. The lettering shall be 25 mm high and shall be embossed on each cover.
- 1.15 **Trench Reinstatements**
- 1.15.1 Reinstatements shall be made in accordance with the requirements of this document, Clause 706 of the Specification and those prescribed in the Highway Authorities and Utilities Committee (HAUC) "Specification for the Reinstatement of Openings in Highways" (ISBN 0 11 551143 1). Should there be any conflict then the requirements of this document shall take precedence.
- 1.15.2 The reinstatement method shall be an "All Permanent Reinstatement". The sub-base, base course and wearing course, or equivalent, shall be reinstated to a permanent standard at the first visit. In all cases the final surface of the reinstatement shall comply with the requirements given in Section S6.4.
- 1.16 **Cables and Routes**
- 1.16.1 All traffic signal and paired feeder cables shall conform to BS6346/87.
- 1.16.2 All traffic signal cables for LV and ELV will be orange PVC/SWA multi-core 1.5mm CSA cable.
- 1.16.3 All traffic signal paired feeder cable will be orange PVC/SWA 1.5mm CSA one or two pair cable.
- 1.16.4 Multi-core and paired feeder Cables should be armoured and the outer sheath colour Orange PVC in accordance with NJUG Volume 1.
- 1.16.5 Cable routes and core allocations for traffic signals and associated equipment to be carried out by the Company.

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

- 1.16.6 Cables shall not be jointed throughout their length from origin to destination.
- 1.16.7 Approximately one metre of spare length for each cable run shall be coiled at the main duct chamber adjacent to the controller, in addition in intermediate chambers addition spare shall be provided where capacity permits.
- 1.16.8 Cable cores/pairs shall be neatly routed within the cabinet and its connection frame and tie-wrapped in looms, with due regard to accessibility of maintainable items.
- 1.16.9 All Spare cores including ELV should not be connected to Earth until Earth Impedance Tests have been completed.
- 1.16.10 All cables shall be run in ducts.
- 1.16.11 Traffic Signal Cable must be separately ducted from Utility, Communication and other Services Cable.
- 1.16.12 Mains cable between the controller and ETP will be black in colour in accordance with NJUG Volume 1 and comprise 3 cores 6mm sq csa SWA cable
- 1.16.13 The mains cable must be installed through ducting running directly from the ETP to the controller and not via the controller access chamber.
- 1.16.14 Cabling between poles will not be acceptable unless prior agreement has been received from the Overseeing Organisation.
- 1.17 **Electrical Termination Pillar (ETP)**
- 1.17.1 The ETP shall house a double poled lockable fused isolator, fused appropriately which must comply with the latest edition of the IEE wiring regulations.
- 1.17.2 The base of the ETP shall be sealed with a layer of epoxy resin 6 mm thick which is to be laid on top of a sand base to prevent ingress of gas and moisture into the ETP.
- 1.17.3 The Company shall obtain approval of the proposed type of ETP from the Overseeing Organisation.
- 1.18 **Detection**
- 1.18.1 All slot cutting shall be designed and equipment installed to meet the latest version of MCH1540 - Specification for the Installation of Detector Loops on Motorways and All Purpose Trunk Roads, MCE0108 – Siting of Inductive Loops for Vehicle Detecting Equipment at Permanent Road Traffic Signals and TR 2512 – Performance Specification for Below Ground Detection Equipment.
- 1.18.2 MOVA Loops shall be designed and installed to meet the latest Version of MCH1542 – Installation of MOVA.
- 1.18.3 All loop tails shall be labelled in the nearest loop box to identify the loop identity which must relate the site specific approved drawings. The labels must be marked with a permanent marker.
- 1.18.4 All loop feeder cable joints to be re-usable to IP68 Cat 1.
- 1.18.5 All above ground detector units must be installed, configured and aligned in accordance with the manufactures instructions.
- 1.18.6 Above ground traffic detection will comply with the latest version of TR2505 – Performance Specification for Above Ground Vehicle Detector Systems for use at Permanent Traffic Signal Installations.

## Part 4: Specification

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

- 1.18.7 Kerbside Detectors will comply with the latest version of TR2507 – Performance Specification for Kerbside Detection Systems for Use with Nearside Signals and Demand Units.
- 1.18.8 On-Crossing Detectors will comply with the latest version of TR2506 - Performance Specification for Above Ground On-Crossing Pedestrian Detection System.
- 1.19 **Factory Acceptance Testing (FAT)**
- 1.19.1 The Company will be responsible for the factory acceptance testing of the controller(s) with a representative of the Traffic Signal Contractor, the Contracting Authority and the Overseeing Organisation.
- 1.19.2 The Company will give two weeks' notice prior to the FAT to all attendees.
- 1.19.3 The Company shall provide a testing schedule for approval of the Contracting Authority and Overseeing Organisation which shall cover all of the required testing to be undertaken during the FAT. This schedule will be generic and shall cover all modes of operation with a site specific schedule being developed if required.
- 1.20 **Electrical testing**
- 1.20.1 The Contracting Authority / Overseeing Organisation shall be given a minimum of seven days' notice before commencement of all electrical tests preceding final site commissioning. These tests shall be witnessed by the Contracting Authority / Overseeing Organisation at their discretion.
- 1.20.2 Electrical Testing is to be carried out by a Traffic Signal Contractor Engineer.
- 1.20.3 Earth Test Certificate to be provided before the Installation is Commissioned Electrical Testing to conform to BS7671 Requirements for electrical installations. IEE Wiring Regulations. Seventeenth edition.
- 1.20.4 The test certificate shall be handed to the Contracting Authority / Overseeing Organisation prior to the commencement of the final site acceptance.
- 1.20.5 Electrical Completion Certificate and Test Results are to be provided before the Installation is Commissioned – BS7671 Regulation 741-01-01. This record shall be handed to the Employer / Overseeing Organisation at the commencement of the final site acceptance.
- 1.20.6 The Company shall only arrange the final commissioning/acceptance of the site when the installation is complete.
- 1.20.7 The Company shall be responsible for all aspects of achieving a working installation operating to the satisfaction of the Contracting Authority / Overseeing Organisation.
- 1.21 **Completion of the Installation**
- 1.21.1 The Company should supply 2 copies all the Documentation including a copy for site prior to the Switch On to confirm that the Traffic Signal Site meets all statutory requirements.
- Controller Test Schedule;
  - Controller Specification;
  - MOVA dataset;
  - MOVA Specification;
  - Statutory Approvals and copies of letter of acceptance ;
  - Loop Test Schedule;

## Part 4: Specification

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

- Earth Test Certificate;
- Electrical Completion Certificate and Test Results To be provided before the Installation is Commissioned – BS7671 Regulation 741-01-01;
- As Installed Site Layout Diagram; and
- As built Cable layout / Schedules inclusive of Electrical Isolation cabinets.

## 1.21.2 Prior to final acceptance of the installation;

- (a) Where redundant traffic signal equipment still remains it must be removed and any old ducts abandoned. Any redundant duct runs must be blocked off at the duct end with expanding foam or similar to the approval of the Overseeing Organisation.
- (b) All redundant equipment shall be recycled or disposed of as per the Environmental Management Plan.

**1.22 Final Commissioning and Acceptance**

- 1.22.1 The Company will be responsible for organising the site acceptance testing of Controller(s) and the associated installation with a representative of the Traffic Signal Contractor, the Contracting Authority and the Overseeing Organisation.
- 1.22.2 The Company shall give the Contracting Authority / Overseeing Organisation two weeks' notice of switch on of any new traffic signal installation so that the Contracting Authority / Overseeing Organisation can complete its signal inspections and inform the Police and local representatives.
- 1.22.3 The Company shall liaise with the Contracting Authority / Overseeing Organisation with respect to agreeing the methodology for bringing the site into operation.
- 1.22.4 Completion Certificate will be furnished by the Company duly made out and briefly describing the completed Works. There will be sufficient space for the Contracting Authority / Overseeing Organisation comments and endorsements. A copy will be available to the Contracting Authority / Overseeing Organisation for their records immediately following completion.
- 1.22.5 Any minor defects and/or omission, which do not prevent the Installation from functioning in a safe and efficient manner, shall be recorded on the Completion Certificate.
- 1.22.6 The Company will ensure a Traffic Signal Engineer will be in attendance during switch on and final commissioning. The Traffic Signal Engineer will assist the Traffic Signal Installation team if any problems arise during switch-on.
- 1.22.7 The Company will provide a specialist MOVA Engineer to validate and commission the MOVA operation to the satisfaction of the Contracting Authority / Overseeing Organisation.
- 1.22.8 The Company shall give the Contracting Authority and Overseeing Organisation two weeks' notice of switch on of any new traffic signal installation so that the Contracting Authority / Overseeing Organisation can complete its signal inspections and inform the relevant organisations such as Police and local representatives.

**2 Temporary Traffic Signals**

- 2.1 The Company shall note the requirements of Appendix 1/17.

## Part 4: Specification

---

**Appendix 12/5: Traffic Signs – Traffic Signals**

- 2.2 The use of Portable traffic signals used to control traffic shall comply with Department of Transport Specifications TR2502B Performance Specification for Portable Traffic Signal Control Equipment for Use at Road Works and TR 2405A Performance Specification for Vehicle Detection Equipment for Vehicle Actuated Portable Traffic Signals. In addition TR 2503B Performance Specification for Pedestrian Facilities at Temporary Stand Alone Traffic Signals shall comply where there is a requirement for pedestrians, the latest version of The Traffic Signs Regulations and General Directions, TAL 2/11 Portable Traffic Signals for the Control of Vehicular Traffic and TAL3/11 Signal Controlled Pedestrian Facilities at Portable Traffic Signals and Chapter 8 of the Traffic Signs Manual. Haul route crossings shall be in accordance with Chapter 8 of the Traffic Signs Manual.
- 2.3 The Company shall obtain the prior written consent of the Contracting Authority for multiphase temporary traffic signals.
- 2.4 The Company shall provide to the Contracting Authority a drawing to a scale of 1:500 with the position of the signals indicated by a dot and an arrow from the dot indicating the direction of the lights and a key to symbols used shall be shown. The position of signals shall be accurate to within 2 metres. The proposed stage arrangement, signal timings inclusive of all red periods together with location of the generator shall also be provided.
- 2.5 The Company shall consult and comply with the requirements of the emergency services (Fire, Ambulance and Police). Passenger transport operators shall also be informed if the Operations affect any of their routes.

**3 Controlled and Uncontrolled Crossings**

- 3.1 Replacement of surfaces of controlled and uncontrolled crossings shall match that already existing unless otherwise the subject of a traffic regulation order.

**4 General Safety**

- 4.1 Live cables may be present in the ducting system and at the pole tops and due care must therefore be taken at all times.
- 4.2 On new installations all primary, secondary signal heads shall be covered with an orange cover, approved by the Overseeing Organisation until the site is brought into service, to prevent any misunderstanding to the motorist.
- 4.3 On all new installations all Pedestrians push button panels or nearside demand units are to be covered with "Pedestrian Crossing Not In Use" sign approved by the Overseeing Organisation, until the site is brought into service.
- 4.4 Particular care to protect the work force and the general public shall be taken where duct chamber lids are removed and/or cables are being installed.
- 4.5 The attention of the Company is brought to the potential danger of gas build-up within duct and chamber systems.
- 4.6 Appropriate equipment and tools, including those recommended by the equipment manufacturer(s), shall be used.
- 4.7 Special care shall be taken to ensure the electrical integrity of any temporary works.

**5 Controlled Crossings**

- 5.1 As per section 1 above.

**6 Traffic Signal Assessments and Design**

---

## Appendix 12/5: Traffic Signs – Traffic Signals

### 6.1 Traffic Signal Modelling

- 6.1.1 The Company shall develop Linsig models utilising the latest version of software for the operation and performance all of the proposed traffic signal junctions and signalised roundabouts to assess the Practical Reserve Capacity and queues / delay for individual links. The models shall be based on the Company's Design.
- 6.1.2 Linsig models shall include AM, PM and an interpeak periods, the results for each periods are to be issued to the Contracting Authority for approval prior to undertaking Paramics modelling in relation to Appendix F - Procedure for Demonstrating Compliance with the Junction Requirements and Junction Performance Indicators requirements & Appendix G – Contract Junction Compliance Traffic Models and Associated Instructions and Analysis Spreadsheet.

### 6.2 Traffic Signal Design

- 6.2.1 All Traffic Signal Designs shall be in compliance with the Scottish Government guidelines, Scotland Transport Cycling by Design 2010, The Design Manual for Roads and Bridges, Transport Scotland Disability Discrimination Act Good Practice Guide for Roads 2009, various National Standards and Advise. It is to be noted that some of standards and advice listed below have within them reference to superseded documents. It is the Designer's responsibility to verify and ensure that they are designing to the most current standards.
- 6.2.2 In addition, works shall be carried out in accordance with TA 84/06 Volume 8, Section 1, Part 2 Code of Practice for Traffic Control and Information Systems for All-Purpose Roads and following relevant publications and legislation shall include, but not be limited to the following:
- Construction (Design and Management) Regulations – 2007;
  - The Traffic Signs (Amendment) (No 2) Regulations and General Directions 2011;
  - The Zebra, Pelican and Puffin Pedestrian Crossing Regulations and General Directions 1997;
  - Design Manual for Roads and Bridges (DMRB);
  - Department for Transport (DfT) Specifications (TD);
  - Traffic Advisory Leaflets (TAL);
  - Local Transport Notes (LTN); and
  - Puffin Good Practice Guide.
- 6.2.3 The Company shall liaise with the Overseeing Organisations to establish whether or not local design criteria are relevant to the design process. The Company shall if applicable document local requirements and include them within the Design for approval.
- 6.2.4 All Designs shall have a stage 1, 2, 3 and 4 Road Safety Audit (stages 1 and 2 can be combined for smaller installations). No works may commence until all items raised by the stage 2 safety audit have been addressed or a viable exception approved.
- 6.2.5 The Company shall provide the Contracting Authority and Overseeing Organisation with traffic signal detailed design drawings, standard details, controller TR2500 forms and MOVA Datasets for all proposed installations.

**Appendix 12/5: Traffic Signs – Traffic Signals**

6.2.6 Drawings shall be provided as follows inclusive of Key and Notes:

- (i) General Arrangement – to include but not limited to
  - Scale 1:500;
  - Stage Arrangement;
  - Road Markings;
  - Cable Diagram to include Controller, Auxiliary cabinets, link cables for MOVA linking and RS232 communication cables as applicable and detection;
  - MOVA Loop Dimensions Schedule;
  - Passive Pole Rating Schedule;
  - Pole Numbers;
  - Loop References;
  - Chamber References;
  - Cabinet References;
  - Tactile paving;
  - Advanced Cycle Stop Lines, if applicable;
  - Detection;
  - Traffic Signal Controller and Auxiliary Cabinets;
  - Traffic Signal Poles; and
  - Retention Sockets.
- (ii) Traffic Signal Layout – to include but not limited to
  - Scale 1:200;
  - Stage Arrangement; and
  - Road Markings.
  - Cable Diagram to include Controller, Auxiliary cabinets, link cables for MOVA linking and RS232 communication cables as applicable and detection
  - Traffic Signal Equipment
  - Passive Pole Rating Schedule.
- (iii) Traffic Signal Ducting, Chambers and Detection Loops - to include but not limited to
  - Scale 1:200;
  - All Chambers including Reference;
  - Carriageway Loop Boxes including Reference;
  - Ducting;
  - Retention Sockets;
  - Road Markings;

**Appendix 12/5: Traffic Signs – Traffic Signals**

- Loops including Reference; and
  - Controller.
- (iv) Road Markings
- Scale 1:500;
  - Road Markings ;
  - Permanent Traffic Signs required as part of the Traffic Signal Installation; and
  - Temporary Traffic Signs require as part of the Traffic Signal Installation.
- 6.2.7 In addition to the above, the Company shall provide details of special road surfacing, such as high friction road surfacing, proposed on approaches to stoplines and within controlled crossing areas.
- 6.2.8 All of the above drawings and documents shall be issued to the Contracting Authority and Overseeing Organisation for approval. No works are to commence until traffic signal approval has been obtained.
- 6.2.9 A safety case, including risk assessment/hazard checklists, shall be submitted for each design/site. The safety case shall include any departure from standards & specifications or use of non-prescribed traffic signs/ road markings and appropriate approvals shall be in place for the same. It shall also include any CDM, Environmental and DDA related departures and risks. This shall be in addition to the independent Road Safety Audit, DDA audits and Independent Audit Review.

## Part 4: Specification

## Appendix 30/1: Landscaping General

| Action Number | Sub-Clause Reference | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Part 4: Specification

## Appendix 30/2: Weed Control

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1             | 3002.1     | <p>Weed control for all injurious weed species, including those listed in sub-Clause 3002.1 with the addition of Oil Seed Rape, Rosebay Willowherb and Marestail, shall be carried out throughout the New Works until the end of the Establishment Period at sufficient frequency to restrict their growth and prevent their spread.</p> <p>In locations where effective weed control shall be possible and practicable by other means allowed within this Agreement there shall be a presumption against the use of chemical herbicides.</p>                                            |
| 2             | 3002.3     | <p>Total weed control shall apply to the following locations:</p> <ul style="list-style-type: none"> <li>(i) Bases of road restraint systems;</li> <li>(ii) Around structures, columns, posts and signs;</li> <li>(iii) All paved areas, kerbs, hardstandings, filter drains and gravel areas (including but not limited to gravelled central reservations); and</li> <li>(iv) As otherwise instructed.</li> </ul> <p>The Company shall apply herbicides at sufficient frequency to eliminate weed growth throughout the New Works Period until the end of the Establishment Period.</p> |
| 3             | 3002.4     | <p>Total weed control by non-residual herbicide shall apply to the following locations:</p> <ul style="list-style-type: none"> <li>(i) All areas to be seeded and all planting beds prior to seeding or planting so as to be in a weed free condition;</li> <li>(ii) All stockpiles of topsoil which shall be maintained in a weed free condition;</li> <li>(iii) All planted beds; and</li> <li>(iv) As otherwise instructed.</li> </ul>                                                                                                                                                |
| 4             | 3002.5     | <p>A translocated herbicide approved by the Scottish Environment Protection Agency (SEPA) or their successors for use in or near water shall be used for weed control in all open ditches, lagoons, watercourses and filter drains. Control shall be at sufficient frequency to eliminate weed growth throughout the New Works until the end of the Establishment Period.</p>                                                                                                                                                                                                            |
| 5             | 3002.6     | <p>Selective weed control using translocated herbicide shall be applied in all non-hardened verges, central reserves, planted areas and other grassed areas as and when necessary to restrict growth and prevent the spread of broadleaf weed species.</p>                                                                                                                                                                                                                                                                                                                               |

## Part 4: Specification

## Appendix 30/2: Weed Control

| Action Number. | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6              | 3002.7     | <p>Where weed control shall be by spot application translocated herbicide shall be applied as necessary to control weed species listed in Sub Clause 3002.1, and in any case no less than twice a year during periods of active growth throughout the New Works until the end of the Establishment Period at the following locations:</p> <ul style="list-style-type: none"> <li>(i) For control of injurious weeds in grass and wildflower areas;</li> <li>(ii) All woodland and planted areas;</li> <li>(iii) All hedgerow planting areas; and</li> <li>(iv) As otherwise instructed.</li> </ul> <p>Spot treatment shall typically be via controlled droplet application of a type appropriate to the herbicide, the species being treated and the location.</p> |
| 7              | 3002.8     | <p>Weed control by hand weeding shall be carried out as necessary, and in any case no less than twice a year throughout the New Works until the end of the Establishment Period at the following locations:</p> <ul style="list-style-type: none"> <li>(i) All woodland and other planting areas where spot application may cause damage;</li> <li>(ii) Hedgerow planting where spot application may cause damage;</li> <li>(iii) Wildflower areas and areas densely populated with desirable broadleaf species where spot application may cause damage;</li> <li>(iv) Within plant protectors and tree/shrub shelters;</li> <li>(v) Around planting stations in existing woodland; and</li> <li>(vi) As otherwise instructed.</li> </ul>                          |
| 8              | 3002.9     | <p>Weed control by cutting shall be carried out as necessary in areas where the extent of growth or type of weed is not effectively controlled by herbicide application or hand weeding.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 9              | 3002.10    | <p>The Company shall remove all arisings in accordance with sub-clause 3002.10 from weed control operations that involve hand weeding and cutting.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## Part 4: Specification

**Appendix 30/3: Control of Rabbits and Deer**

| <b>Action Number</b> | <b>Sub-Clause</b> | <b>Specification Amendment</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                    | 3003.1            | The Company shall carry out rabbit, hare and deer control in all planting and seeding areas as necessary to ensure successful establishment for the duration of the New Works until the end of the Establishment Period. The Company shall only cut areas of brambles and herbage that shall interfere with the control of rabbits and deer. The arisings shall be used to form habitat piles in locations where they are unlikely to become visual intrusive or interfere with access or maintenance. No clearance of brambles or herbage shall be undertaken during the bird nesting season. |
| 2                    | 3003.8            | The Company shall ensure effective rabbit control for the duration of the New Works and until the end of the Establishment Period and shall be responsible for contacting adjacent landowners regarding their obligation to control infestations on their own land.                                                                                                                                                                                                                                                                                                                            |
| 3                    | 3003.9            | The Contracting Authority shall request an inspection of the site with a representative of the Company at monthly intervals to ensure effective control has been achieved.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 4                    | 3003.12           | The Company shall keep planting enclosures free of rabbits, rabbit burrows including exit/entry holes and deer until such time that planting has become fully established and is of sufficient size and maturity so as to be no longer vulnerable to significant damage but not earlier than the end of the Establishment Period.                                                                                                                                                                                                                                                              |
| 5                    | 3003.14           | The Company shall replace damaged plants annually (towards the end of the planting season) and maintain them for the duration of the New Works including the Establishment Period.                                                                                                                                                                                                                                                                                                                                                                                                             |

## Part 4: Specification

## Appendix 30/4: Ground Preparation

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1             | 3004.1     | Within areas of proposed planting or seeding, all existing grass and herbaceous vegetation shall be cut, in accordance with sub-clause 3004.1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2             | 3004.2     | <p>All areas which shall be planted shall be treated with translocated herbicide between 21 and 25 days prior to planting in accordance with sub-clause 3002.4, with the exception of areas to be planted in existing woodland, rock cuttings, areas to be planted in inverted turfs and within areas of undisturbed ground.</p> <p>At feathered and extra heavy standard tree planting stations all existing grass and herbaceous vegetation shall be cut to the full extent of the area required to be excavated for planting pits prior to excavation of the pits.</p> <p>On the Balmedie-Tipperty section, translocated herbicide is only to be used in areas where the extent of existing vegetation is sufficient to impede the establishment of the new planting.</p> |
| 3             | 3004.5     | <p>Subsoil in planting areas, excluding areas which shall be planted in inverted turfs within areas of undisturbed ground, shall be ripped to a minimum depth of 450 millimetres prior to spreading of topsoil.</p> <p>Areas in existing arable or pasture land which shall be planted shall be ripped to a minimum depth of 600 millimetres to ensure the breaking up of any subsoil compaction.</p>                                                                                                                                                                                                                                                                                                                                                                        |
| 4             | 3004.6     | Spacing between the tine furrows shall be in accordance with sub-clause 3004.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 5             | 3004.7     | The requirements of sub-clauses 3004.8 - 3004.11 shall apply to all subsoil to be seeded or topsoil spread under the Agreement except where otherwise stated in Appendix 30/4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Part 4: Specification

## Appendix 30/4: Ground Preparation

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6             | 3004.8     | <p>All undesirable material brought to the surface including, but not limited to, stones, roots, tufts of grass and foreign matter larger than the sizes specified below shall be removed off Site unless otherwise agreed with the Contracting Authority.</p> <p>The size of the stones / debris which shall be removed relates to the proposed vegetation type. The maximum stone / debris size permitted for each, is as follows :</p> <ul style="list-style-type: none"> <li>(i) Grass verges and visibility splays: 25 millimetre protruding stone after topsoil has been firmed / rolled;</li> <li>(ii) All other grassland and wildflower grassland: 75 millimetre;</li> <li>(iii) Planted areas except amenity / ornamental shrub planting: 100 millimetre; and</li> <li>(iv) Amenity / ornamental shrub planting: 75 millimetres.</li> </ul> <p>The above stone removal shall apply to the full depth of topsoil required for the proposed vegetation cover.</p> <p>The overall stone content by percentage volume shall not be greater than that of the adjacent soils.</p> <p>Stones brought to the surface during final preparation of soils shall be retained on site and used to form habitat piles in locations that are not visually intrusive and shall not interfere with access or the maintenance of the New Works Site. All non-organic foreign matter shall be removed off site.</p> |

## Part 4: Specification

**Appendix 30/5: Grass Seeding, Wildflower Seeding and Turfing**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1             | 3005.1     | Grass seed shall be sown as per sub-clause 3005.1. Wildflower seed shall be sown in early spring or autumn at the same time as grass unless otherwise recommended by the supplier.                                                                                                                                                                                                                                                                                                                                            |
| 2             | 3005.2     | All areas to be seeded or turfed shall be cultivated as per sub-clause 3005.2, with the exception of rock faces. A 250 millimetre radius shall be left clear of seeding around each new tree and shrub.                                                                                                                                                                                                                                                                                                                       |
| 3             | 3005.3     | <p>All areas to be seeded with general purpose grass and productive grass shall have fertiliser and or other soil ameliorants incorporated into the upper 50 millimetre of soil at a rate(s) considered necessary for successful establishment. The rate of application and composition of fertilizer and other ameliorants shall be based upon the topsoil test results. (as per Appendix 1/5)</p> <p>No fertiliser or soil ameliorants shall be applied to areas to be seeded with wildflower (species rich) grassland.</p> |

## Part 4: Specification

## Appendix 30/5: Grass Seeding, Wildflower Seeding and Turfing

| Action Number | Sub-Clause      | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4             | 3005.4          | <p>Grass seed mixes shall be approved by the Contracting Authority and shall be as follows;</p> <ul style="list-style-type: none"> <li>(i) A general purpose grass seed mix shall be used in road verges, embankments and cuttings not planted or where other grassland is required. The seed mix(s) shall provide a rapidly establishing sward to provide an appearance and habitat which reflects adjacent and surrounding grassland communities. The mix(s) shall reflect the diversity of grassland communities along the route as described in the Environmental Assessment Documents;</li> <li>(ii) Wildflower (species rich) grassland shall be flora and grassland of very low fertility created to enhance the amenity and nature conservation value of the road corridor. The proposed mix(s) shall match the adjacent and surrounding grassland communities of greatest nature conservation value. Short growing grasslands of low fertility in which the growth of wild flowers shall be encouraged. For wildflower grassland mixes the ratio of grass seed to wildflowers shall be 80%:20% respectively. No single species of wildflower shall be less than 10% by number of the wildflower component with the exception of Oxeye Daisy (<i>Leucanthemum vulgare</i>) which, if specified, shall be limited to not more than 3% of the wildflower component.;</li> <li>(iii) Productive grassland shall be sown where grassland is potentially to be returned to agricultural use for pasture. The Company shall consult with the Contracting Authority with regard to species mixes and sowing density on land to be returned to pasture;</li> <li>(iv) Areas to be potentially returned to arable use shall be seeded with nitrogen fixing species. The Company shall consult with the Contracting Authority with regard to species mixes and sowing density on land to potentially be returned to arable use;</li> <li>(v) All new woodland and native scrub planting areas shall be seeded with a low-maintenance grass mix capable of suppressing weed growth in planting areas until a full canopy of trees and shrubs has developed.</li> </ul> |
|               |                 | <p>Consideration shall be given to use of grass and wildflower species which are unpalatable to deer where there is a risk that deer will be attracted to areas close to the scheme roads.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 5             | Inserted Clause | <p>All seed shall be delivered to the Site in bags sealed by the supplier. A label shall be attached to each bag giving details of species and percentage breakdown. The same details shall be enclosed within each bag. Each bag shall be numbered uniquely and relate to the label and documents within the bag. The documents shall be submitted to the Contracting Authority prior to sowing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Part 4: Specification

## Appendix 30/5: Grass Seeding, Wildflower Seeding and Turfing

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6             | 3005.7     | <p>Wildflower mixes shall be of UK native origin selected and procured in accordance with Appendix 1 of 'Cost Effective Landscape: Learning from Nature'</p> <p>The Company shall complete and submit to the Contracting Authority a wildflower seed Provenance Certificate in accordance with the Certification Procedure.</p> <p>Wildflower seed mixes shall contain only species occurring in the National Vegetation Classification category appropriate to the location.</p> <p>Local provenance seed shall be supplied by either harvesting from the approved sites or from nursery propagation to the approval of Scottish Natural Heritage. If nursery propagated seed is used the Company shall allow sufficient time in their programme to ensure that the seed is available when required for sowing.</p> <p>All wildflower seed shall be tested by an independent organisation such as the Scottish Agricultural Science Agency (SASA) to verify purity of seed (percentage of seed / inert material), species composition, and percentage germination. The test certificates shall be made available to the Contracting Authority for consent prior to sowing.</p> <p>The wildflower seed mixes shall contain a minimum percentage of:</p> <ul style="list-style-type: none"> <li>i) 95% pure seed, not inert material (% by weight); and</li> <li>ii) a percentage of flora rather than grass seed species which matches the percentage of flora species in the surrounding plant communities of greatest nature conservation value.</li> </ul> <p>Seeds within the wildflower seed mixes shall have a minimum germination rate of 80%.</p> |
| 7             | 3005.8     | <p>Sowing of seed shall be carried out at the rate specified below or in accordance with the supplier's recommendations if different:</p> <p>General purpose grass seed shall be sown at a rate of not less than 20g/m<sup>2</sup> for verges and side slopes of cuttings and embankments and 15g/m<sup>2</sup> elsewhere.</p> <p>Wildflower grassland areas shall be sown at a rate of not less than 5g/m<sup>2</sup></p> <p>Grass seed for land to be returned to agricultural use: 25g/m<sup>2</sup></p> <p>The sowing of seed shall be carried out as soon as practicable in order to benefit soils stabilisation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Part 4: Specification

**Appendix 30/5: Grass Seeding, Wildflower Seeding and Turfing**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8             | 3005.10    | <p>Hydraulic seeding shall be applied only to weathered rock cuttings and other areas which, with the agreement of the Contracting Authority, cannot be practicably broadcast seeded by hand or mechanical means. The seed mix for hydraulic seeding of rock cuttings shall be Species Rich Grass and in other areas as shown on the drawings.</p> <p>The rate of application of grass seed for hydraulic seeding shall be the same as for hand or broadcast seeding unless otherwise agreed with the Contracting Authority. The other ingredients in the hydraulic mixture shall be as recommended by the specialist hydroseeding sub-contractor and agreed with the Contracting Authority.</p> |
| 9             | 3005.14    | Any turf imported shall comply with sub-clause 3005.14 and shall contain a grass and/or herb mixture which reflects adjacent and surrounding grassland communities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 10            | 3005.25    | Turf on slopes greater than 1 in 4 shall be secured using either galvanised wire pins or softwood pegs as per sub-clause 3005.25.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 11            | 3005.26    | Newly laid turf laid shall be watered as per sub-clause 3005.26.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 12            | 3005.29    | <p>A minimum of two establishment cuts shall be undertaken for general purpose and productive grass; with further cuts undertaken as necessary to achieve coverage as stated in sub-clause 3005.11 and one cut subsequent to the required sward coverage being achieved.</p> <p>There shall be no establishment cut for wildflower (species rich) grassland.</p>                                                                                                                                                                                                                                                                                                                                 |
| 13            | 3005.30    | <p>All general purpose grass areas shall be left clear of grass clippings following each mowing by raking or other suitable method except where grass height is less than 200mm at the time of cutting in which case grass cuttings may be left in situ.</p> <p>Clippings shall not be removed from wildflower (species rich) grassland following cutting.</p>                                                                                                                                                                                                                                                                                                                                   |

## Part 4: Specification

## Appendix 30/6: Planting

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                |
|---------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1             | 3006.3     | Plant stock and sizes shall be as Tables 30/6.1, 30/6.2, 30/6.3 and 30/6.4. Species, varieties and plant spacings shall be in accordance with the New Works Requirements and the Indicative Landscape Design drawings. |

## Appendix 30/6: Planting

| Action Number | Sub-Clause         | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2             | 3006.6             | The Company shall provide written confirmation that United Kingdom native plant species have been sourced from the highest available preference for selecting plant material contained within Appendix 1 of 'Cost Effective Landscape: Learning from Nature' prior to commencement of planting Works. The Company shall submit Provenance Certificates in accordance with the Certification Procedure accompanied by certification from the supplying nurseries in respect of the provenance of plant material in accordance with the Certification Procedure. Where there is a choice of form or size of plant material, the most local provenance shall be selected. |
| 3             | 3006.12            | Topsoil for backfilling of tree pits may be site won where it is of suitable quality for successful establishment of the newly planted trees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 4             | 3006.13            | Slow release fertilizer shall be incorporated into the soil as sub-clause 3006.15                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 5             | 3006.14            | Compost pH, conductivity and nutrient composition shall be decided in compliance with the Company's Quality Plan and associated method statements based on the results of topsoil tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 6             | 3006.15            | <p>Slow release fertiliser shall be incorporated into backfill, into the top 75 millimetres of planting bed soil, at the following standard rates using the fertiliser specified unless the results of the soil tests indicate otherwise.</p> <p>Slow release fertilizer with a Nitrogen: Potassium: Phosphorus: Magnesium ratio of 14:8:13:2 shall be incorporated into the backfill of tree pits/planting areas as follows:</p> <ul style="list-style-type: none"> <li>(i) Standard trees: 20g;</li> <li>(ii) Heavy Standard trees: 40g;</li> <li>(iii) Extra Heavy Standard trees 100g; and</li> <li>(iv) Woodland planting beds 50g per square metre.</li> </ul>   |
| 7             | 3006.16            | <p>Root dips shall be applied to all bare root plants and anti-desiccant sprays shall be applied to all conifers at the following times:</p> <ul style="list-style-type: none"> <li>i) At the time of lifting from the nursery;</li> <li>ii) On arrival at site; and</li> <li>iii) Immediately prior to planting.</li> </ul>                                                                                                                                                                                                                                                                                                                                           |
| 8             | Addition al Clause | All plants shall be dipped in a solution of, or dusted with powder of, mycorrhizal fungi appropriate to the plant species at a rate in accordance with the fungi supplier, immediately prior to planting                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 9             | 3006.17            | All bare rooted, rootballed and cell grown stock shall be planted whilst the plants are dormant between the beginning of November and the end of March. All evergreen species shall be planted in either March or November.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 10            | 3006.23            | Bare root whips, transplants and cell grown plants may be notch planted into areas of cultivated or existing topsoil of minimum 300 millimetres depth in accordance with methods (i) of sub-clause 3006.23 unless planting is into inverted turves, when method (ii) shall be used.                                                                                                                                                                                                                                                                                                                                                                                    |

## Part 4: Specification

**Appendix 30/6: Planting**

|    |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11 | 3006.24 | <p>Pits for whips, transplants and shrubs shall be dug in accordance with sub-clause 3006.24 in locations where topsoil depths are less than 300 millimetres. All container grown plants shall be pit planted. Trenches for hedges shall be dug in locations where there is less than 300 millimetres depth of topsoil.</p> <p>Arisings from planting pits and trenches shall be retained on the New Works Site and deposited within proposed landscape earthworks.</p>                                                                                                                                |
| 12 | 3006.28 | Hedge trenches excavated in accordance with Table 30/1 shall be backfilled with a mixture of 80% topsoil and 20% compost with slow release fertiliser added as required to make up for any nutrient deficiencies identified in the soil test results.                                                                                                                                                                                                                                                                                                                                                  |
| 13 | 3006.29 | <p>All planting areas with spread or existing topsoil shall be cultivated in compliance with sub-clause 3006.29 prior to planting.</p> <p>Slow release fertiliser shall be scattered over the soil in compliance with Sub-Clause 3006.15</p>                                                                                                                                                                                                                                                                                                                                                           |
| 14 | 3006.30 | A 600mm wide strip along all hedgelines except those that have been backfilled shall be cultivated in accordance with sub-clause 3006.30.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 15 | 3006.33 | The soil shall be watered to field capacity immediately after planting if there is a risk to plants of water stress or wilting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 17 | 3006.38 | Root barriers shall be required where the clearances required for underground services and drainage infrastructure or the integrity of structures would otherwise be adversely affected by plant roots or where required by the Relevant Authorities.                                                                                                                                                                                                                                                                                                                                                  |
| 18 | 3006.41 | The minimum length of tree stakes for heavy standard and extra heavy standard trees shall be 2 m and the minimum width 75 millimetres. Tree stake sizes for other tree forms shall be in accordance with sub-Clause 3006.41.                                                                                                                                                                                                                                                                                                                                                                           |
| 19 | 3006.42 | Where planting on a slope stakes may be driven at an angle mid-way between the slope and the vertical tree stem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 20 | 3006.43 | Heavy and extra heavy standard trees shall be double staked. Stakes shall be a minimum of 2 m in length and 75 mm in diameter and shall be driven vertically into the pit to a depth of not less than 500 mm below the bottom of the pit. Stakes shall not pass through the rootball.                                                                                                                                                                                                                                                                                                                  |
| 21 | 3006.44 | Extra heavy standards with double staking shall be secured centrally between the stakes with one set of supporting bands of fire hose or equivalent webbing of minimum width 70 millimetres positioned with the upper edge of the uppermost webbing band at 700 mm above ground level and 50 mm below the tops of the stakes which shall be driven or trimmed to 650 mm above ground level. Each band shall be looped around the tree stem and nailed to the stake using at least two 25 mm galvanised clout nails and shall be equally tensioned so as to hold the tree centrally between the stakes. |
| 22 | 3006.45 | Semi-mature trees shall be planted as shown on Drawing Number K5 to Volume 3 of the MCHW in compliance with the Company's Quality Plan and associated method statements and consented to by the Contracting Authority.                                                                                                                                                                                                                                                                                                                                                                                 |

## Part 4: Specification

## Appendix 30/6: Planting

|    |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 23 | 3006.49                  | All extra heavy standard, heavy standard and standard trees shall be watered to field capacity immediately following planting. All other tree and shrub plants shall be watered to field capacity immediately after planting if there is a risk to plants of water stress or wilting.                                                                                                                                                                                                                                                  |
| 24 | Addition<br>al<br>Clause | All container grown, cell grown and root balled plants shall be watered to field capacity immediately before planting.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 25 | 3006.52                  | Plant protectors shall be provided for all two year old transplants, cell grown plants, shrubs and conifers.<br><br>(i) Tree shelters shall be a minimum of 750 millimetres height and 80-120 millimetres diameter. Shrub shelters shall be a minimum of 750 millimetres height and 100-150 millimetres diameter;<br><br>(ii) Where the species shall be Fagus, base ventilation shall be provided; and<br><br>(iii) Shelters shall be installed with timber stakes and adjustable ties according to the manufacturer's specification. |
| 26 | 3006.66                  | Bulbs shall be planted at the following rates per square metre:<br><br>Bluebell 150 Nr;<br>Crocus 100 Nr;<br>Tulip 50 Nr;<br>Narcissus (large) 40 Nr;<br>Narcissus (medium) 60 Nr; and<br>Narcissus (small) 100 Nr;<br>Other species shall be planted at a suitable rate dependant on species in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                          |
| 27 | 3006.67                  | Bulbs shall be planted with the base at the depth in accordance with good horticultural practice and in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                                                                                                                                                                                                                   |
| 28 | 3006.73                  | Reeds, rushes, marginal and aquatic plants shall be planted around the margins of wet pond drainage features in accordance with the New Works Requirements the Company's Quality Plan and associated method statements.                                                                                                                                                                                                                                                                                                                |
| 29 | 3006.77                  | Excavated material from sub-clause 3006.77 operations shall be spread throughout the planting area.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 30 | 3006.80                  | The Company shall insert marker posts to mark out the boundaries of each planting area.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 31 | 3006.87                  | The Company shall replace all plants found to be defective or vandalised annually for the duration of the New Works until the end of the Establishment Period.                                                                                                                                                                                                                                                                                                                                                                         |
| 32 | 3006.91                  | All replacement extra heavy standard, heavy standard, standard and rootballed evergreen stock shall be watered to field capacity following planting. All other tree and shrub plants shall be watered to field capacity immediately after planting if there is a risk to plants of water stress or wilting.                                                                                                                                                                                                                            |

## Part 4: Specification

**Appendix 30/6: Planting**

|    |         |                                                                                                                                                                               |
|----|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33 | 3006.92 | The Company shall carry out maintenance of new planting in accordance with clauses 3007 and 3009 for the duration of the New Works until the end of the Establishment Period. |

## Part 4: Specification

## Appendix 30/7: Grass, Bulbs and Wildflower Maintenance

| Action Number | Sub-Clause        | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1             | 3007.1            | All grass and wildflower areas within the boundary of the New Works Site shall be maintained in accordance with Clause 3007.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2             | 3007.5            | No cutting shall be carried out within 250 millimetres of unprotected trees and shrubs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 3             | 3007.17           | <p>Low frequency grass cutting shall be undertaken in accordance with sub-Clause 3007.17 in the following areas:</p> <ul style="list-style-type: none"> <li>(i) A 1.2 metre swathe width measured from the back edge of the carriageway or hard strip. The width of cut shall be increased accordingly where the remaining grass between the 1.2 metre area and any adjacent boundary (such as a wall, fence or planting bed) is less than 2 metres;</li> <li>(ii) Grassed areas within visibility splays; and</li> <li>(iii) Where there are footpaths remote from the carriageway edge where grass between the road and footpath receives a low frequency cut, the outside edge of the footpath shall be subject to the same regime for a width of 1m.</li> </ul> <p>Additional selective cuts shall be undertaken as necessary to maintain visibility. The areas subject to additional selective cuts shall be extended beyond the minimum area required to maintain visibility in order that they appear naturalistic with smoothly curving edges, avoiding straight lines and abrupt angles.</p> |
| 4             | 3007.18           | All grass areas not cut at medium or low frequency shall be cut at a 'minimal frequency' in accordance with sub-Clauses 3007.18-21, except those seeded with a grass/wildflower mixture.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 5             | 3007.20           | Additional selective cuts shall be undertaken if required to maintain visibility of road signs. The areas subject to additional selective cuts shall be extended beyond the minimum area required to maintain visibility in order that they appear naturalistic with smoothly curving edges, avoiding straight lines and abrupt angles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 6             | 3007.22           | All banks and ditches shall be cut in accordance with sub-clause 3007.22. All arisings shall be dispersed over the sward avoiding the blocking of drains and ditches.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 7             | 3007.23           | All grass cutting in planting areas shall be cut in accordance with sub-Clause 3007.23. The cutting shall include bramble but exclude naturally regenerated tree and shrub seedlings, the retention of which would be consistent with the overall management objectives for the planting area and in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 8             | 3007.24           | Arisings shall be evenly spread on site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 8             | 3007.26 - 3007.27 | All areas seeded with wildflower shall be cut according to the most appropriate regime detailed in sub-clause 3007.26 and according to sub-clause 3007.27. The regime is to be in compliance with the Company's Quality Plan and associated method statements to suit the wildflower mix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## Part 4: Specification

**Appendix 30/7: Grass, Bulbs and Wildflower Maintenance**

| <b>Action Number</b> | <b>Sub-Clause</b> | <b>Specification Amendment</b>                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9                    | 3007.28           | The ground shall be scarified only where necessary for wildflower colonisation in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                                                                                                   |
| 10                   | 3007.29           | <p>Spot herbicide treatment in accordance with sub-Clause 3007.29 shall be carried out at an appropriate frequency in all wildflower areas to eliminate undesirable broadleaf weed species.</p> <p>Areas of self-seeding broadleaf plants considered to be desirable for nature conservation shall be retained. These areas shall be identified by the Company to the Contracting Authority.</p> |
| 11                   | 3007.30           | Areas of wildflower seeding that cannot be effectively controlled by chemical means without risk to of damage to wildflowers shall be hand weeded to eliminate undesirable broadleaf weed species.                                                                                                                                                                                               |
| 12                   | Additional Clause | All damaged or failed sward shall be reinstated with seed to match the surrounding area.                                                                                                                                                                                                                                                                                                         |

Part 4: Specification

**Appendix 30/8: Watering**

| <b>Action Number</b> | <b>Sub-Clause</b> | <b>Specification Amendment</b>                                                                                                                 |
|----------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                    | 3008.6            | The Company shall water all planting for the Establishment Period at a frequency necessary to ensure establishment and survival.               |
| 2                    | 3008.7            | Additional watering in accordance with sub-Clause 3008.7 may be required for all planting and seeding in periods of abnormally dry conditions. |

## Part 4: Specification

**Appendix 30/9: Establishment Maintenance for Planting**

| Action Number | Sub-Clause        | Specification Amendment                                                                                                                                                                                                                                                                                                                             |
|---------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1             | 3009.1            | All planting and planting areas shall be maintained for the Establishment Period in accordance with sub-clauses 3009.2 to 3009.25.                                                                                                                                                                                                                  |
| 2             | 3009.4            | Tree stakes, tubes, guards and ties that are no longer required shall be offered to the Contracting Authority for re-use. Where the Contracting Authority declines the offer the Company shall dispose of them to a licensed disposal facility.                                                                                                     |
| 3             | 3009.9            | Delete sub-Clause 9 and insert:<br><br>Plant circles shall be defined as the area within 250 millimetres radius of an individual tree or shrub, within which weed control operations shall be carried out.                                                                                                                                          |
| 3             | 3009.10           | Translocated herbicide shall be applied at a frequency as necessary to keep plant circles in all woodland and scrub planting areas weed free, whilst protecting trees and shrubs from the herbicide. Hand weeding shall be undertaken to remove weeds from within tree and shrub shelters and guards.                                               |
| 4             | 3009.11           | Where alternative means of weed control prove ineffective residual herbicide shall be applied at a frequency as necessary to keep plant circles in all woodland and scrub planting areas weed free in accordance with sub-Clause 3009.11.                                                                                                           |
| 5             | 3009.12           | Mulch shall be maintained in accordance with sub-clause 3009.12 in amenity / ornamental shrub planting areas.                                                                                                                                                                                                                                       |
| 6             | 3009.18           | Mulch shall be maintained in accordance with sub-clause 3009.18 in all cultivated beds.                                                                                                                                                                                                                                                             |
| 7             | 3009.20           | All hedges and an area of 300mm width on either side of the hedge plants bases shall be maintained weed free for the duration of the Establishment Period in accordance with sub-clause 3009.20.                                                                                                                                                    |
| 8             | 3009.25           | All extra heavy standard and heavy standard trees and rootballed conifer trees shall be inspected and maintained annually in accordance with sub clause 3009.25.                                                                                                                                                                                    |
| 10            | Additional Clause | During the first 2 years after planting, hedge plants shall be pruned once each year between 1 <sup>st</sup> September and 31 <sup>st</sup> January to encourage formation of a vigorous, compact, uniform hedge. The current year's growth of prominent new shoots shall be reduced in length by one third. Arisings shall be distributed on site. |

## Part 4: Specification

**Appendix 30/10: Maintenance of Established Trees and Shrubs**

| <b>Action No.</b> | <b>Sub-Clause</b> | <b>Specification Amendment</b>                                                                                                                                                                                                                                  |
|-------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                 | 3010.1            | All established trees and shrubs shall be maintained for the duration of the period of the New Works in accordance with sub-clauses 3010.2 - 3010.71.                                                                                                           |
| 2                 | 3010.4            | Healthy arisings shall be dealt with in accordance with one or more of items (iv) to (ix) of sub-Clause 3010.4 in compliance with the Company's Quality Plan and associated method statements.                                                                  |
| 4                 | 3010.8            | Shrubs grown for coloured stems shall be pruned once every two years in accordance with sub-Clause 3010.8 paragraph (i).<br><br>Overgrown shrubs to be coppiced back in accordance with sub-Clause 3010.8 paragraph (vii).                                      |
| 5                 | 3010.12           | Hedges shall be cut once a year in accordance between September and January.                                                                                                                                                                                    |
| 6                 | 3010.20           | If any hedge laying shall be required it shall be undertaken in an appropriate style in order to reflect the adjacent or local appearance.                                                                                                                      |
| 7                 | 3010.22           | Mixed hedgerows shall be laid in an appropriate style in order to reflect the adjacent or local appearance.                                                                                                                                                     |
| 8                 | 3010.31           | New hedge plants to infill significant gaps in hedges after they have been laid or cut shall be of size, species, and planting density to match the existing hedgerow.                                                                                          |
| 9                 | 3010.45           | Tree size categories shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                   |
| 10                | 3010.54           | Crown lifting shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                          |
| 11                | 3010.55           | Crown thinning shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                         |
| 12                | 3010.56           | Crown reduction or reshaping shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                           |
| 13                | 3010.57           | Straight felling shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                       |
| 14                | 3010.58           | Sectional felling shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                      |
| 15                | 3010.59           | Stumps shall be cut as close to the ground as possible or where the tree is growing in a hedge the stump shall be left level with the top of the hedge.                                                                                                         |
| 16                | 3010.60           | Stump treatment shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                        |
| 17                | 3010.62           | Stump removal shall be in compliance with the Company's Quality Plan and associated method statements.                                                                                                                                                          |
| 18                | 3010.63           | All arisings shall be disposed of off the New Works Site or placed within woodland areas as log piles and or windrows where this is consistent with the management objectives for the woodland and the Company's Quality Plan and associated method statements. |

## Part 4: Specification

**Appendix 30/10: Maintenance of Established Trees and Shrubs**

| <b>Action Number</b> | <b>Sub-Clause</b> | <b>Specification Amendment</b>                                                                                                                                                                                                                                                    |
|----------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19                   | 3010.65           | Thinning and coppicing shall be carried out in areas of establishing and maturing woodland in accordance with Table 30/10.1 and where identified as being required by the Company's regular inspections.                                                                          |
| 20                   | 3010.68           | Undesirable scrub species shall be controlled in accordance with Table 30/10.1 and where identified as being required by the Company's regular inspections.                                                                                                                       |
| 21                   | 3010.69           | Undesirable scrub tree and shrub species that shall be controlled shall typically have a stem diameter of 0-75 millimetres and a height of 0.75-2.5 metres.                                                                                                                       |
| 22                   | Additional Clause | Undesirable scrub species shall be cut down to 50mm above ground level and plants allowed to re-grow. The Company shall then apply translocated herbicide during the first year of active growth after cutting at a suitable time to maximize the effectiveness of the herbicide. |
| 23                   | 3010.71           | Operations in accordance with sub-clause 3010.71 shall be carried out in compliance with Table 30/10.1 and the Company's Quality Plan and associated method statements.                                                                                                           |

## Part 4: Specification

**Appendix 30/11: Management of Waterbodies**

| <b>Action Number</b> | <b>Sub-Clause</b> | <b>Specification Amendment</b>                                                                                                                                                                                                                                                                                                   |
|----------------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                    | 3011.1            | The management operations under Clause 3011 shall take place in all waterbodies and open ditches within the New Works Site.                                                                                                                                                                                                      |
| 2                    | 3011.3            | All inlets and outlets that shall be part of the road drainage system within the New Works Site shall be inspected in accordance with sub-Clause 3011.3.                                                                                                                                                                         |
| 3                    | 3011.4            | The Company shall eliminate weeds as listed in Clause 3002 from within or adjacent to water bodies.                                                                                                                                                                                                                              |
| 4                    | 3011.6            | Injurious weeds on the banks of water courses and within the New Works Site shall be removed by hand in accordance with sub-clause 3002.8.                                                                                                                                                                                       |
| 6                    | 3011.8            | Silt shall be removed from waterbodies that are part of the road drainage system as required to maintain their functional requirements in accordance with sub-Clause 3011.8. The Company shall be responsible for consulting with SEPA and any other relevant bodies prior to undertaking any operations affecting a water body. |
| 7                    | 3011.9            | All reedbeds and marginal plants shall be inspected twice a year in early February and October in accordance to sub-clause 3011.9.                                                                                                                                                                                               |
| 8                    | Additional Clause | All marginal aquatic plants shall be maintained by the Company for the duration of the New Works until the end of the Establishment Period with any failed or defective plants replaced annually in accordance with Clause 3006.                                                                                                 |

Part 4: Specification

**Appendix 30/12: Specialist Ecological Measures**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 1             | 3012.1     | Special ecological measures shall be maintained for the duration of the New Works until the end of the Establishment Period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2             | 3012.2     | Special ecological measures works shall be carried out in seasons to be agreed with SNH and any other relevant consultees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 3             | 3012.3     | Dry mammal underpasses, culverts and culvert ledges, aquaduct ramps, overbridges, underbridges, fencing and underpasses and any other mitigation measures for wildlife shall be designed, located and installed in accordance with the requirements of SNH, DMRB and any other relevant consultees and shall take account of current best practice and statutory guidance. If there is any discrepancy between SNH's requirements and Clause 3012, SNH's requirements shall prevail.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|               |            | <p>The location and extent of fencing for protected fauna shall be consistent with the requirements of the Environmental Assessment Documents, SNH and any other relevant consultees.</p> <p>All badger and otter fencing shall be completed to the approval of the Company's ecological specialist who shall oversee installation. Fencing shall be completed in advance of opening the road to vehicular traffic.</p> <p>Where there is the requirement for badger or otter fencing along the same line as other fence types (e.g. a permanent boundary of stock proof fencing or deer fencing) a single fence which combines the specifications and functions of both types of shall be used.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|               |            | <p>Badger proof fencing shall be in accordance with the following specification:</p> <p>Post and mesh fences in accordance with British Standard BS 1722 part 2: 2006 "Specification for strained wire and wire mesh netting fences" with a steel wire mesh having maximum openings of 50 mm X 50 mm and wires of not less than 2.5 mm diameter in accordance with British Standard BS 4102: 1998 "Specification for steel wire for general fencing purposes" and galvanised to British Standard EN ISO 1461: (2009). "Hot dip galvanized coatings on fabricated iron and steel articles - specifications and test methods". The mesh shall be securely stapled to the posts and rails of the fences. Stobs shall be spaced no more than 1.8 m apart. The mesh shall extend a minimum of 1000 mm above ground level and be buried vertically to 300 mm below ground and turned at right angles from the bottom of the buried section towards the direction from which badgers are expected to approach for a further 300 mm. The return shall consist of a separate roll of mesh attached with clips to the bottom of the vertical mesh. The vertical mesh shall be secured at ground level by a galvanised wire not less than 5 mm in diameter. A single strand of barbed wire shall be secured along the top of the fence. Fixings for attachment to Structures shall use a resin fixed replaceable bolt system, fencing and stone walls shall be tied into structures either at headwalls, abutments or parapets as appropriate and shall join at a 90 ° angle with a gap no greater than 50 mm.</p> |

## Part 4: Specification

**Appendix 30/12: Specialist Ecological Measures**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               |            | <p>Otter and badger proof fencing shall be in accordance with the following specification:</p> <p>Post and mesh fences in accordance with British Standard BS 1722 part 2: 2006 "Specification for strained wire and wire mesh netting fences" with a rectangular steel wire mesh having maximum openings of 50 mm X 50 mm and wires of not less than 2.5 mm diameter in accordance with British Standard BS 4102: 1998 "Specification for steel wire for general fencing purposes" and galvanised to British Standard EN ISO 1461: (2009). "Hot dip galvanized coatings on fabricated iron and steel articles - specifications and test methods". The mesh shall be securely stapled to the posts and rails of the fences. Stobs shall be spaced no more than 1.8 m apart. The mesh shall extend a minimum of 1500 mm above ground level and be buried vertically to 300 mm below ground and turned at right angles from the bottom of the buried section towards the direction from which otters or badgers are expected to approach for a further 300 mm. The return shall consist of a separate roll of mesh attached with clips to the bottom of the vertical mesh. The vertical mesh shall be secured at ground level by a galvanised wire not less than 5 mm in diameter. The top of the fence will have a meshed overhang of 30 mm angled at 45 degrees away from the road. Fixings for attachment to Structures shall use a resin fixed replaceable bolt system, fencing and stone walls will be tied into structures either at headwalls, abutments or parapets as appropriate and will join at a 90 ° angle with a gap no greater than 50 mm. Where fencing is required around culvert entrances fencing shall be installed around the back of the culvert entrance ensuring that there are no gaps onto the carriageway and that passage by mammals over and around the back of the culvert entrance is not possible.</p> |
|               |            | <p>Where the New Works require construction of both drystone walls and badger or badger and otter proof fencing, the fencing shall be erected on the non-highway side of the drystone wall. Any drystone wall on the road side of any badger or badger and otter proof fencing shall be positioned in such a manner as to not encourage undesirable use of that drystone wall by the species for which the fencing has been erected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|               |            | <p>Badger Gates shall be constructed in accordance with the RSPCA publication 'Problems with Badgers?' All badger gates shall incorporate concrete sills to prevent digging or erosion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Part 4: Specification

**Appendix 30/12: Specialist Ecological Measures**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               |            | <p>Badger and otter proof access gates shall be installed in accordance with the following specification:</p> <p>A 100 mm concrete sill shall be installed underneath access gates. The gate shall close to leave a gap of about 10 mm between the slab and the bottom rail. Mesh having maximum openings of 50 mm under any circumstances shall be attached to the inside of the gate to ensure no gap exists. No gaps greater than 50 mm shall be present on either side of the gate.</p> <p>Badger and Otter proof noise barriers shall be installed in accordance with the following specification:</p> <p>Environmental and Noise barriers shall have an underground anti-burrow deterrent attached to the base of the bottom panel/section of the barrier where required to prevent otter and badger breach of the barrier. The deterrent shall be a welded mesh buried vertically to 300 mm below ground and then bent at right angles from the bottom of the buried section away from the new road for distance of 300 mm. Where mesh cannot be used a concrete log extending 300 mm below the barrier and away from the new road for a further 300 mm from the base of the barrier shall be installed.</p> |

## Part 4: Specification

**Appendix 30/12: Specialist Ecological Measures**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               |            | <p>Dry mammal underpasses, wildlife bridges, culverts and culvert ledges overbridges, underbridges and underpasses shall be installed in a manner and at locations recommended by the Company's ecological specialist as follows, in line with the Environmental Assessment Documents and protected species licence requirements as conditioned by SNH:</p> <p>Bridges, structures and culverts designed to carry water shall incorporate a ledge or platform not less than 150 mm above the highest flood level, not less than 600 mm wide and allowing headroom of not less than 600 mm over the full width of the ledge or platform. Access ramps with a minimum width of 300 millimetres and a maximum gradient of 1 in 2 from the ledge or platform to the adjacent banks of the watercourse and to the normal water level shall be provided at each end.</p> <p>Dry mammal underpasses shall be constructed using cylindrical pipes of 600 mm or greater for lengths of 20m or less, no less than 900 mm for crossing between 20 to 50 m in length and where greater than 50m in length a minimum of 1050 mm. Pipes shall be constructed above possible water levels and incorporate a gradual fall to the outside, and shall also have sealed joints to prevent water seepage. They shall be in a straight line to maintain line of sight and there shall be no step between the underpass entrance and the ground level. The design shall allow surface water to drain away from the entrances such that ponding does not occur at any time. Head wall design shall prevent animals from climbing over adjacent mitigation fencing and headwalls shall be located in a shallow recess within the fence alignment. Underpasses shall be designed in accordance with the SNH publication Badgers and Development (SNH 2001) and the DMRB (Highways Agency 2001).</p> <p>A squirrel crossing shall be installed across the A947 at approximate chainage 324400 (offline), close to the northern tie-in of the new A947 to the existing route of the A947. This shall be constructed in accordance with the following specification.</p> <p>Two lengths of synthetic rope (with a textured surface rather than a waxy surface) approximately 40 mm in diameter shall be tightly strung approximately 100 mm apart between two telegraph poles. A zig-zag of narrow-gauge synthetic rope of similar type shall be attached between the two parallel ropes along their full length using plastic zip-ties which shall be trimmed in length to ensure that there are no rough edges. The rope bridge shall be suspended at least 6 m above the carriageway and be positioned within the Land Made Available by the Scottish Ministers to encourage use of the rope bridge by squirrels. Following erection of the rope bridge feeders shall be installed at suitable locations at either end of the bridge to encourage use by squirrels, and the feeders shall be regularly replenished.</p> |
| 4             | 3012.4     | Wildlife grilles shall be designed and located in accordance with the requirements of SNH and any other relevant consultees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Part 4: Specification

**Appendix 30/12: Specialist Ecological Measures**

| Action Number | Sub-Clause | Specification Amendment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 5             | 3012.5     | In February and October of each year the Company shall inspect all dry mammal underpasses, aquaducts, wildlife bridges, culverts and culvert ledges, overbridges, underbridges, underpasses and the squirrel crossing and report their condition to the Contracting Authority.<br><br>In February and October of each year the Company shall inspect all wildlife fences, badger gates, badger and otter access gates and grilles and report their condition to the Contracting Authority                                                                          |
| 6             | 3012.6     | Reflectors shall be designed and located in accordance with the requirements of SNH and any other relevant consultees.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 7             | 3012.7     | Reflectors shall be inspected monthly in accordance with the sub-Clause 3012.7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 8             | 3012.8     | Bat boxes, squirrel boxes and bird nesting boxes shall be installed in accordance with the requirements of SNH and any other relevant consultees.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 9             | 3012.9     | Bat boxes, squirrel boxes and bird nesting boxes shall be inspected annually and their condition reported to the Contracting Authority in accordance with the requirements of SNH, any protected species licensing requirement and any other relevant consultees                                                                                                                                                                                                                                                                                                   |
| 10            | 3012.10    | Bat boxes, squirrel boxes and bird nesting boxes shall be repaired or if not possible replaced with a like for like model within one month                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 11            | 3012.11    | Other habitat creation measures including artificial badger setts, otter holts, amphibian ponds, reptile hibernacula, water vole habitat areas, and red squirrel bridge, bat mitigation in buildings, culverts and principal structures shall be inspected annually and their condition reported to the Contracting Authority. The Company shall consult and comply with the requirements of SNH, any protected species licensing requirement and any other relevant consultees in respect of Works likely to impact upon or affect any protected species or area. |
| 12            | 3012.12    | Information about the location of Protected Species is in the environmental assessment documents. This information is confidential.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 13            | 3012.13    | The Company shall obtain licenses or use only licensed operatives for all works in the vicinity of protected species. Working buffer zones shall comply with SNH requirements                                                                                                                                                                                                                                                                                                                                                                                      |
| 14            | 3012.14    | Landscape planting within 30 m of any protected species mitigation shall be undertaken in consultation with SNH and the Company's ecological specialist to determine an appropriate methodology.                                                                                                                                                                                                                                                                                                                                                                   |
| 15            | 3012.15    | Artificial, moveable hedges required for bat mitigation in relation to temporary works shall be designed and located in accordance with the requirements of SNH and any other relevant consultees. The movement of these hedges shall be approved by the Company's ecological specialist who shall oversee their installation.                                                                                                                                                                                                                                     |
| 16            | 3012.16    | Water levels within culverts shall be sufficient enough to enable fish passage at all times of the year and be free of any obstruction. Fish species shall be protected and moved from the area affected by the works and placed into the watercourse further downstream.                                                                                                                                                                                                                                                                                          |

## Part 5: Certification

---

**1 Introduction**

- 1.1 The Company shall provide to the Contracting Authority certification to cover the Design or Design Elements, construction and completion of the New Works.
- Compliance with these procedures shall not relieve the Company of its responsibilities under the terms of this Agreement.
- 1.2 Models of certificates are given in Appendix 1.
- The Contracting Authority shall not accept modifications or qualifications to these certificates unless agreed in writing by the Contracting Authority.
- 1.3 The Certification Procedure associated with a part of the Design or Design Element shall be deemed to cover all aspects of the part of the Design or Design Element and as described in sections 2 to 16 inclusive.
- 1.4 The Company shall maintain and provide to the Contracting Authority a register recording names and original signatures of individuals authorised to carry out the various functions of the Designer(s) and Design Checker(s) set out below.
- The only person authorised to delegate the various functions of the respective Designer(s) and Design Checker(s) shall be a Director of the respective organisation.
- The Company shall maintain and provide to the Contracting Authority a register recording name(s) and original signature(s) of the individuals authorised to sign certificates in accordance with this Certification Procedure on behalf of the New Works Contractor.
- 1.5 The Company shall ensure that the Company's Representative:
- 1.5.1 is at all relevant times appointed to carry out the procedures referred to in the Certification Procedure; and
- 1.5.2 shall at all times comply with the Certification Procedure.
- 1.6 The Company shall ensure that the checking procedures referred to in the Certification Procedure are complied with by the Company's Representative.
- 1.7 The Company shall maintain and provide to the Contracting Authority a register recording the current status of all certificates set out below.
- 1.8 Subject to requirements of this Certification Procedure, construction of any part of the New Works requiring certification shall not commence until the relevant certification required by the Certification Procedure shall have been completed and shall have been acknowledged by the Contracting Authority.
- 1.9 Design Data, which is the subject of any part of this Certification Procedure, shall not be amended until the relevant certification in respect of such amendment shall have been submitted to the Contracting Authority in accordance with the Certification Procedure.

## **2 Design Certificates and Design Check Certificates**

2.1 Separate Design Certificates and Design Check Certificates shall be required where applicable for all parts of the Design or Design Elements including but not limited to:

2.1.1 fencing and environmental barriers;

2.1.2 road restraint systems;

2.1.3 drainage;

2.1.4 earthworks:

(i) earthworks (site clearance);

(ii) earthworks (bulk);

(iii) grouting;

(iv) piling;

2.1.5 road pavements;

2.1.6 road layout;

2.1.7 kerb, footways and paved areas;

2.1.8 signs and road markings;

2.1.9 lighting;

2.1.10 electrical installations;

2.1.11 Structures;

2.1.12 environment and landscaping;

2.1.13 Undertakers;

2.1.14 Accommodation Works;

2.1.15 Traffic Scotland equipment; and

2.1.16 otherwise.

Separate Design Certificates and Design Check Certificates shall be required for each Structure Design.

2.2 Notwithstanding any other requirements of this Agreement, the Design check for each part of the Design or Design Elements shall be carried out by a Design Checker who shall be technically independent of:

2.2.1 the Designer;

2.2.2 the New Works Contractor; and

2.2.3 their associated companies.

## Part 5: Certification

- 
- 2.3 The Company shall submit two copies of the details of the proposed Design Checker for approval by the Contracting Authority.
- The Contracting Authority shall consider the proposed Design Checker and shall issue written approval of or comment on such to the Company.
- 2.4 The requirements for earthworks certification detailed herein shall supersede those of the DMRB.
- A Geotechnical Design Report shall be prepared for all earthworks, foundations and other geotechnical design elements.
- The final report(s) shall be submitted prior to submittal of the relevant Construction Certificate(s).
- 2.5 Each Design Certificate submitted by the Company shall be signed by:
- 2.5.1 the Designer;
- 2.5.2 the New Works Contractor; and
- 2.5.3 the Company.
- Each Design Check Certificate submitted by the Company shall be signed by:
- 2.5.4 the Design Checker;
- 2.5.5 the New Works Contractor; and
- 2.5.6 the Company.
- 2.6 The Company shall submit to the Contracting Authority two copies of each signed certificate, with original signatures, along with a minimum of four hard copies and one pdf copy of all relevant drawings, schedules, appendices and otherwise required to accompany each certificate. One copy of each certificate shall be returned to the Company within 7 days of receipt, signed in acknowledgement by the Contracting Authority.
- 2.7 The Company shall provide with each Design Certificate and Design Check Certificate the relevant drawings, schedules and appendices as detailed in paragraph 3.2.6.

### **3 Design Interim Certificates and Design Check Interim Certificates: Staged Procedure**

- 3.1 The parts of the Design or Design Elements identified in paragraph 2.1 requiring Design Certificates and Design Check Certificates may each be further divided to:
- 3.1.1 accommodate the Company's phasing of the New Works; and
- 3.1.2 enable construction of the further divided part of the Design or Design Elements to proceed.
- 3.2 Where this method of certification shall be adopted the following procedure shall apply:
- 3.2.1 For each further divided part of the Design or Design Element, the Company shall submit to the Contracting Authority two copies of a schedule of such further divided parts of the Design or Design Element which it proposes to certify. One copy of the schedule shall be returned to the Company within 7 days of receipt, signed in acknowledgement of receipt by the Contracting Authority.

## Part 5: Certification

This process shall be completed prior to the implementation of the staged procedure and the schedule incorporated into the Design register referred to in paragraph 1.8.

- 3.2.2 The Company shall submit to the Contracting Authority two copies of each Design Interim Certificate and Design Check Interim Certificate for each further divided part of the Design or Design Element, with original signatures, along with a minimum of four hard copies and one pdf of all relevant drawings, schedules, appendices and otherwise requiring to accompany each certificate. One copy of each Interim Certificate shall be returned to the Company within 7 days of receipt, signed in acknowledgement of receipt by the Contracting Authority.
- 3.2.3 Construction for any part of the New Works for each of the further divided parts of the Design or Design Element requiring certification shall not commence until this procedure shall have been completed.
- 3.2.4 Once all Design Interim Certificates and Design Check Interim Certificates for a part of the Design or Design Element identified in paragraph 2.1 have been completed, the Company shall submit to the Contracting Authority two copies of the Design Certificates and Design Check Certificates for each part of the Design or Design Elements with original signatures along with one copy of all relevant drawings, schedules, appendices and otherwise. One copy of each certificate shall be returned to the Company within 7 days of receipt, signed in acknowledgement of receipt by the Contracting Authority.
- 3.2.5 Each Design Interim Certificate submitted by the Company shall be signed by:
- (i) the Designer;
  - (ii) the New Works Contractor; and
  - (iii) the Company.
- Each Design Check Interim Certificate submitted by the Company shall be signed by:
- (iv) the Design Checker;
  - (v) the New Works Contractor; and
  - (vi) the Company.
- 3.2.6 The Company shall provide with each Design Certificate, Design Check Certificate, Design Interim Certificate and Design Check Interim Certificate the relevant drawings, schedules and appendices including, but not limited to:
- (i) plans to a scale of not less than 1:500 of the road layout showing the
    - (a) Special Road(s)
    - (b) Trunk Road(s)
    - (c) Side Road(s);
    - (d) Access Tracks, New Means of Access and otherwise;
    - (e) Accommodation Works Access Tracks; and
    - (f) otherwise;
  - (ii) drawings of the road construction giving typical cross-sections;
  - (iii) drawings to a scale of not less than 1:500 showing all:
    - (a) drains;
    - (b) underground pipes;

## Part 5: Certification

- (c) boundary fences;
  - (d) road restraint systems;
  - (e) environmental barriers;
  - (f) kerbs;
  - (g) footways;
  - (h) footpaths;
  - (i) paved areas;
  - (j) electrical equipment;
  - (k) signs;
  - (l) road markings;
  - (m) environmental and landscape;
  - (n) Traffic Scotland equipment; and
  - (o) Otherwise.
- (iv) drawings to a scale not less than 1:200 showing all relevant aspects of the Structures including but not limited to reinforcement details and schedules; and
- (v) any other schedules or supporting information which are listed in the Numbered Appendices within the Specification.

#### **4 Interim Construction Certificates**

4.1 An Interim Construction Certificate signed by:

4.1.1 the Designer;

4.1.2 the New Works Contractor; and

4.1.3 the Company;

shall be provided by the Company at the end of each calendar month prior to the date of Substantial Completion of each Phase of the New Works.

4.2 An Interim Construction Certificate shall be completed in respect of parts of the New Works constructed during that month.

4.3 The Company shall submit to the Contracting Authority two copies of each certificate with original signatures. One copy of each certificate shall be returned to the Company within 7 days of receipt signed in acknowledgement by the Contracting Authority.

#### **5 Final Construction Certificates**

5.1 A Final Construction Certificate signed by:

5.1.1 the Designer;

5.1.2 the New Works Contractor; and

5.1.3 the Company

shall be provided by the Company on completion of the construction of each certified part of the Design or Design Element as identified in paragraph 2.1.

## Part 5: Certification

5.2 Upon Substantial Completion of the last Phase of the New Works the Company shall supply a Final Construction Certificate in respect of the whole of the New Works in addition to an Interim Construction Certificate in respect of the final month of construction.

5.3 The Company shall submit to the Contracting Authority two copies of each certificate with original signatures. One copy of each certificate shall be returned to the Company within 28 days of receipt signed in acknowledgement by the Contracting Authority.

## 6 Interim Defect Correction Certificates

6.1 During the period identified in Clause 12.1.5, Interim Defect Correction Certificates shall be required for Side Roads and Third Party Roads which shall not form the O&M Roads

6.2 An Interim Defect Correction Certificate signed by:

6.2.1 the Designer;

6.2.2 the New Works Contractor; and

6.2.3 the Company;

shall be provided by the Company at the end of each calendar month during the Defects Liability Period.

6.3 The Company shall submit to the Contracting Authority two copies of each certificate with original signatures.

One copy of each certificate shall be returned to the Company within 7 days of receipt signed in acknowledgement by the Contracting Authority.

## 7 Final Defect Correction Certificate

7.1 A Final Defect Correction Certificate shall be required for Side Roads and Third Party Roads which shall not form the O&M Roads which are subject to the remedy of Defects as detailed in Clause 12.1.5.

7.2 A Final Defect Correction Certificate signed by:

7.2.1 the Designer;

7.2.2 the New Works Contractor; and

7.2.3 the Company;

shall be provided by the Company at the end of the period identified in Clause 12.1.5 for each part of the certified Design or Design Element as identified in paragraph 2.1.

7.3 The Company shall submit to the Contracting Authority two copies of each certificate with original signatures. One copy of each certificate shall be returned to the Company within 28 days of receipt signed in acknowledgement by the Contracting Authority.

## 8 Consultation Certificates

8.1 Where within these New Works Requirements there shall be a requirement to consult and comply with a third party, the Company shall provide a completed Consultation Certificate to the Contracting Authority. Subject to the other provisions of this Agreement, the Company shall comply with the special requirements relating to third parties which are listed in Part 7 of these New Works Requirements. Following consultation, the Company shall provide Consultation Certificates signed by:

8.1.1 the Designer;

## Part 5: Certification

- 
- 8.1.2 the New Works Contractor;
- 8.1.3 the Company; and
- 8.1.4 the relevant third parties.
- 8.2 The Company shall submit to the Contracting Authority two copies of each certificate, with original signatures together with a minimum of four hard copies and one pdf copy of all relevant documentation including drawings, other information and associated correspondence between the Company and the relevant third party. One copy of each certificate shall be returned to the Company within 7 days of receipt, signed in acknowledgement by the Contracting Authority.
- 8.3 The Company shall not commence any works which affect the interests of any relevant third party until this procedure is completed.
- 8.4 If following such consultation a relevant third party refuses or unreasonably delays in signing the Consultation Certificate the Company may provide to the Contracting Authority:
- 8.4.1 full details of the consultation undertaken with such third party;
- 8.4.2 full details of the best endeavours the Company has made to obtain the signed Consultation Certificate; and
- 8.4.3 full details of the Company's reasons and justification for allowing the Company to commence the New Works in question without such Consultation Certificate;
- and the Contracting Authority, having considered such information, may at his discretion dispense with the requirement to provide the signed Consultation Certificate in question.
- 8.5 Notwithstanding the other provisions of this Agreement, where there is a requirement to consult there shall be an equivalent requirement to provide a certificate of such consultation to the Contracting Authority in accordance with this paragraph 8.
- Notwithstanding the requirement to consult and comply within these New Works Requirements, where, as a result of such consultation or otherwise any part of the Design or Design Element proposed does not meet the requirements of these New Works Requirements it shall remain the responsibility of the Company to Design and construct the New Works in accordance with the Agreement. For the avoidance of doubt, these New Works Requirements shall take precedence over any changes that may be proposed by the Company following consultation unless agreed in writing by the Contracting Authority in accordance with this Certification Procedure and the Agreement.

## **9 Road Safety Audit Certificates**

- 9.1 Safety Audit Team
- 9.1.1 The Company shall submit two copies of the names and curricula vitae of the proposed Safety Audit Team members for approval by the Contracting Authority. The Safety Audit Team shall be independent of:
- (i) the Company;
  - (ii) the New Works Contractor;
  - (iii) the Designer(s);
  - (iv) the Design Checker(s); and
  - (v) any of their associated companies.

## Part 5: Certification

- 
- 9.1.2 The Contracting Authority shall consider the proposed Safety Audit Team and shall issue written approval of or comment on such to the Company.
- 9.1.3 The Contracting Authority may object to such proposal only for the reason that:
- (i) the proposed Safety Audit Team is not independent of:
    - (a) the Company;
    - (b) the New Works Contractor;
    - (c) the Designer(s);
    - (d) the Design Checker(s); and
    - (e) any of their associated companies; or
  - (ii) the proposed Safety Audit Team does not have, in the opinion of the Contracting Authority, sufficient training or experience of road safety and accident investigation and prevention appropriate to the Road Safety Audit to be undertaken.
- 9.2 Road Safety Audits shall be carried out in accordance with the requirements of Part 1 of these New Works Requirements.
- The Company shall submit to the Contracting Authority two copies of the relevant Road Safety Audit Certificates for each stage of the Road Safety Audit procedure with original signatures together with a minimum of four hard copies and one pdf copy of all relevant documentation including drawings, other information and associated correspondence. One copy of each certificate shall be returned to the Company within 7 days of receipt signed in acknowledgement of receipt by the Contracting Authority.
- 9.3 The Road Safety Audit Certificates shall be issued once the following procedure has been completed:
- 9.3.1 Either the Designer(s) and Design Checker(s) accepts the Safety Audit Team recommendations; or
  - 9.3.2 The Designer(s) submits alternative solutions/proposals to the Safety Audit Team and these are accepted by the Safety Audit Team; or
- The Designer(s) submits alternative solutions/proposals to the Safety Audit Team and because these are not accepted by the Safety Audit Team, submits an Exception Report to the Director for arbitration (as defined in DMRB). In this case the decision of the Director shall be binding on the Company.
- 9.4 Road Safety Audits for Temporary Traffic Management Schemes
- The Company shall submit to the Contracting Authority, two copies of a Stage 2 Road Safety Audit Certificate for each audited Temporary Traffic Management Scheme with original signatures together with a minimum of four hard copies and one pdf copy of all relevant documentation including drawings, other information and associated correspondence not less than ten days before implementation of such Temporary Traffic Management Scheme. One copy of each certificate shall be returned to the Company within 7 days of receipt signed in acknowledgement of receipt by the Contracting Authority.
- 9.4.1 The Company shall submit to the Contracting Authority two copies of a Stage 3 Road Safety Audit Certificate for each audited temporary traffic management scheme with original signatures together with a minimum of four hard copies and one pdf copy of all relevant documentation including drawings, other information and associated

correspondence not less than one day after implementation of such temporary traffic management scheme

One copy of each certificate shall be returned to the Company within 7 days of receipt signed in acknowledgement of receipt by the Contracting Authority.

## **10 Trunk Road Cycle Audit Certificates**

10.1 Trunk Road Cycle Audits shall be carried out in accordance with the requirements of Part 1 of these New Works Requirements.

The Company shall submit to the Contracting Authority, two copies of the Stage 2 Trunk Road Cycle Audit Certificates with original signatures together with a minimum of four hard copies and one pdf copy of all relevant documentation including drawings, other information and associated correspondence. One copy of each certificate shall be returned to the Company within 7 days of receipt signed in acknowledgement of receipt by the Contracting Authority.

10.2 The Trunk Road Cycle Audit Certificates shall be issued once the following procedure has been completed:

10.2.1 Either the Designer(s) and Design Checker(s) accepts the cycle audit team recommendations; or

10.2.2 The Designer(s) submits alternative solutions/proposals to the cycle audit team and these are accepted by the cycle audit team.

## **11 Departures**

11.1 The Company shall submit to the Contracting Authority a minimum of five hard copies and one pdf copy of each Application for Departure From Standards, with original signatures together with a minimum of five hard copies and one pdf copy of all relevant documentation including drawings, other information and associated correspondence. One copy of each Departure From Standards shall be returned to the Company within 7 days of receipt, signed in acknowledgement by the Contracting Authority.

11.2 Each Departure submission to the Contracting Authority shall include as a minimum the information detailed below:

11.2.1 For Departure applications to Volume 6 of the DMRB (Road Geometry), the Company shall provide the information required on the 'Application for Departure From Standards DMRB Volume 6 (Road Geometry)' Proforma contained in Appendix 1.

11.2.2 Departure submission excluding DMRB Volumes 1 to 3 (Structures):

(i) Description of Departure

1:10,000 location plan; 1:500 detailed plan; design speed of road; a statement of the strategy for the route; description of context including contiguous affected adjacent sections of routes in a 2 to 3 kilometres range; desirable minimum standard; proposed Departure including number of steps from desirable minimum standard; details of other Departures or Relaxations affecting the same or related Design elements and otherwise and reasons for the Departure.

(ii) Safety (History of feature)

Performance of Departure feature elsewhere; a risk assessment including different user category effects.

(iii) Compensatory Measures

## Part 5: Certification

Proposed adjustment to the Design to mitigate the effects of the Departure, including use of upgraded materials such as high skid resistant surfacing; improved signing and lining such as warning signs/ladder markings and otherwise; need for further enforcement measures and need for further statutory measures including the introduction of speed restrictions.

## (iv) Cost Consequences

A summary of the cost implications of applying the Departure, including capital cost effects; increased maintenance costs; increases in vehicle operating costs and accident costs and other user dis-benefits.

## (v) Environmental Consequences

The effects, if any which the Departure may have on the Environment in terms of human, flora, fauna, soil, water, air, climate, landscape, materials assets, cultural heritage issues and otherwise.

## (vi) Structural Integrity

Where applicable supply details of any possible effects the Departure may have in relation to the structural integrity/stability of earthworks, Structures and road pavements.

## (vii) Any other relevant information.

## 11.2.3 Departures from DMRB Volumes 1 to 3 (Structures)

The Company shall provide the information required on the 'Application for Departure From Standards DMRB Volumes 1 to 3 (Structures)' Proforma contained in Appendix 1.

## 11.2.4 Details of any proposed Departure shall be submitted to the Contracting Authority prior to any necessary Road Safety Audit Stage 2 being carried out. In this context the Company's attention is drawn to DMRB Volume 1, Section 0, Part 1, 'The Introduction to the DMRB' paragraph 1.17.

## 11.3 The relevant Overseeing Organisation staff shall consider the Company's proposed Departure and shall make a formal determination of the proposed Departure by approving or rejecting it. Approval may be conditional or unconditional. Such approval or rejection of a Departure submission shall be at the sole discretion of the relevant Overseeing Organisation.

## 11.4 The relevant Overseeing Organisation shall inform the Contracting Authority of the Departure determination.

## 11.5 The Contracting Authority shall inform the Company of the Departure determination. Notwithstanding any other provisions of this Agreement, the Company shall not commence any Works which affect the Design or Design Element of the New Works until this procedure is completed.

**12 Company Notice of Change**

## 12.1 Where the Company proposes to either vary the New Works Requirements or the Conceptual Design or the Design in accordance with Clause 35 of the Agreement, full details of the proposal shall be submitted to the Contracting Authority.

## 12.2 The Company shall submit to the Contracting Authority two copies of each Company Notice of Change Certificate with original signatures, together with a minimum of four hard copies and one pdf copy of all relevant documentation including drawings, other information and associated correspondence.

**13 Substantial Completion Certificate**

## Part 5: Certification

13.1 The Company shall submit two copies of the Substantial Completion Certificate with original signatures to the Contracting Authority in accordance with Clause 25 of the Agreement.

**14 Restricted Services Readiness Certificate and Full Services Readiness Certificate**

14.1 The Company shall submit two copies of the Restricted Services Readiness Certificate and the Full Services Readiness Certificate with original signatures to the Contracting Authority in accordance with Clause 24 of the Agreement.

**15 Final Completion Certificate**

15.1 The Company shall submit two copies of the Final Completion Certificate with original signatures to the Contracting Authority in accordance with Clause 26 of the Agreement.

**16 Temporary New Works Certificates**

16.1 Temporary New Works Certificates shall be required for all Temporary New Works associated with any Structure and for any other Temporary New Works which have or require to have a Design input.

The Company shall submit two copies of the Temporary New Works Certificate to the Contracting Authority with original signatures together with a minimum of four hard copies and one pdf copy of all relevant drawings and documents. One copy of each Certificate shall be returned to the Company within seven days of receipt, signed in acknowledgement by the Contracting Authority.

16.2 Each Temporary New Works Certificate submitted by the Company shall be signed by:

16.2.1 the Temporary New Works Design Checker;

16.2.2 the New Works Contractor; and

16.2.3 the Company.

**17 Traffic Scotland Site Acceptance Test Certificates**

17.1 Traffic Scotland test certificates shall be required for all Traffic Scotland equipment including, but not limited to:

17.1.1 the passive network; and

17.1.2 active equipment.

17.2 The Company shall submit two copies of the Traffic Scotland tests certificates to the Contracting Authority with original signatures together with a minimum of four hard copies and one pdf copy of all relevant documents and drawings.

One copy of each Certificate shall be returned to the Company within seven days of receipt, signed in acknowledgement by the Contracting Authority.

17.3 Each Traffic Scotland tests certificate submitted by the Company shall be signed by:

17.3.1 the Designer;

17.3.2 the New Works Contractor; and

17.3.3 the Company.

## Part 5: Certification

- 
- 17.4 The Operation of Traffic Scotland equipment and associated systems shall not commence until the testing and certification process for such shall have been completed satisfactorily as outlined within Part 3 of these New Works Requirements.
- 17.5 The Company shall ensure that testing and certification for Traffic Scotland equipment is completed incrementally throughout the Contract Period. The Company shall prepare a testing and certification plan for the approval of the Traffic Scotland Network Operations Manager.
- 17.6 The Company shall carry out the following tests in accordance with Part 3 of these New Works Requirements:
- 17.6.1 Pre-Issue Tests;
- 17.6.2 Stand Alone Site Acceptance Tests;
- 17.6.3 Pre Commissioning Site Acceptance Tests; and
- 17.6.4 Commissioning Site Acceptance Tests.
- 17.7 The procedures for the submission of certificates for Traffic Scotland tests certificates shall follow these New Works Requirements and the Company's testing and certification plan.
- 17.8 The Equipment Manual (601) and Maintenance Manual (602) provide typical testing and certification procedure for the Traffic Scotland equipment and system. The Transport Scotland Network Operations Manager shall advise the details of testing and certification three months prior to installation of each active equipment type.
- 17.9 The Company shall carry out the required tests for the passive network and active equipment in accordance with these New Works Requirements.

**18 Provenance Certificates**

- 18.1 Provenance Certificates shall be required for all native plant stock required by the Design.
- 18.2 Provenance Certificates signed by:
- 18.2.1 the Designer
- 18.2.2 the landscape Designer; and
- 18.2.3 the Company;
- and shall be provided by the Company for each batch of plants on delivery to the New Works Site.
- The Company shall submit to the Contracting Authority two copies of each Provenance Certificate with original signatures along with a minimum of four hard copies and one pdf copy of all relevant documents. One copy of each certificate shall be returned to the Company within seven days of receipt, signed in acknowledgement by the Contracting Authority.
- 18.3 The Company shall not commence the landscape planting until this procedure shall have been completed.

**APPENDIX 1 : CERTIFICATES**

## Part 5: Certification

**Certificates**

|                                                                                         |            |
|-----------------------------------------------------------------------------------------|------------|

**DESIGN CERTIFICATE: STRUCTURES**

**CERTIFICATE NO: DCS.....**

1 We hereby certify to the Contracting Authority in respect of the design of the following part of the Design or Design Element namely

..... (Name of Structure)

that reasonable professional skill and care has been taken by us with a view to securing that the part of the Design or Design Element:

- (i) complies with the New Works Requirements;
- (ii) has been designed in accordance with the required Design Basis documents listed and dated below;
- (iii) has been accurately translated into the construction drawings and bar bending schedules bearing the unique numbers listed below; and

(iv) is not detrimental to the whole Design or Design Element.

## 1. General

### 1.1. Required Reports

The Company shall submit to the Contracting Authority the reports specified in such number and at the times required by this Agreement. When there is a conflict between the requirements of this Part 6 of these New Works Requirements and a requirement stated elsewhere in this Agreement, the latter shall take precedence.

### 1.2. Form

Such reports shall be in such form as reasonably required by the Contracting Authority, or where a report is required to be submitted periodically in the same form as such report was previously submitted until otherwise required by the Contracting Authority.

### 1.3. Further Information

The Company shall at any time and from time to time at its own cost provide to the Contracting Authority such further information relating to the Operations or otherwise as the Contracting Authority may reasonably require.

### 1.4. Objections to Reports

1.4.1. If the Contracting Authority considers that any report either has not been compiled in accordance with the provisions of this Agreement or has been based on erroneous information or data, then within 20 Business Days of receipt, the Contracting Authority may serve a notice to that effect on the Company.

1.4.2. If any such objection has not been resolved to the satisfaction of the Contracting Authority within 14 days after the service of a notice as detailed in paragraph 1.4.1, then the Contracting Authority may refer the matter to the Dispute Resolution Procedure.

### 1.5. Revisions to Reports

If either the resolution (whether by agreement or determination under the Dispute Resolution Procedure) of any objection made pursuant to paragraph 1.4.1 or the correction of any calculation in relation to the provisions of Schedule 6 requires any revision or adjustment to any report, then the Company shall as soon as practicable issue revised versions of each affected report and such revised report shall for the purposes of this Agreement take the place of the original report.

## 2. Records

### 2.1. Required Records

2.1.1. The Company shall produce, maintain and update all records required by this Agreement including without limitation those set out below.

2.1.2. The Contracting Authority shall within 60 days after the Effective Date deliver up to the Company a copy of the existing records of Transport Scotland in respect of the existing Trunk Roads which are identified as O&M Roads. The Company shall retain such records in safe storage at its own cost and such records shall thereafter be treated for all purposes as though they were records referred to in paragraph 2.1.1.

### 2.2. Audit

---

The records referred to in paragraph 2.1 shall be kept in good order and in such form as to be capable of audit (including by electronic means) by the Contracting Authority.

The Company shall make such records available for inspection (on receipt of reasonable notice) by the Contracting Authority at all times during normal working hours on Business Days in accordance with Clause 74.

### 2.3. Copies

The Company shall provide at its own cost a copy of any records reasonably requested by the Contracting Authority at the place where the records are kept and within the time period for delivery of the records reasonably required by the Contracting Authority, including such records retained under paragraph 2.4.4.

### 2.4. Retention of Records

2.4.1. All records referred to in paragraph 2.1 shall be retained in accordance with Schedule 18 to the Project Agreement.

2.4.2. Where the period for the retention of any records has expired, then the Company shall notify the Contracting Authority as to what it intends to do with such records in accordance with Schedule 18 of the Project Agreement

2.4.3. Upon termination of this Agreement, the Company shall at its own cost deliver up to the Contracting Authority in the manner and at the location as the Contracting Authority shall specify all such records as are referred to in paragraph 2.1 which were in existence at the Termination Date (or, where those records are required by statute to remain with the Company, copies thereof) or such part of such records as the Contracting Authority may by notice to the Company specify. The Contracting Authority shall make available to the Company all the records the Company delivers up pursuant to this paragraph 2.4.3, subject to reasonable notice.

2.4.4. The Company shall retain in safe storage for a period of not less than 6 years following the termination of this Agreement all such records as are referred to in paragraph 2.4.3 which the Contracting Authority do not require to be delivered up to them. The costs of retaining those records in safe storage shall be as specified in Schedule 18 of the Project Agreement.

### 2.5. Computer Records

2.5.1 To the extent that the records of the Company shall be created or maintained on a computer or other electronic storage device, then the Company shall meet with and adhere to the requirements of the Contracting Authority for a procedure for back-up and off-site storage for copies of such records.

2.5.1. The Company shall maintain the records in a storage facility which shall ensure that all the records are maintained in a good condition without degradation for the specified retention periods.

---

### 3. Not Used

### 4. Design and Construction

#### 4.1. Progress Reports

From the Date of this Agreement until Final Completion, the Company shall submit to the Contracting Authority a copy of:

- 4.1.1. a monthly progress report (together with a copy of an abbreviated version thereof) covering all relevant aspects of the New Works including but not limited to:
- (i) all actual or potential changes to the programme to be provided in accordance with Appendix 1/13 to Part 4 of these New Works Requirements (including Contracting Authority Changes and Company Changes and any other changes which are likely to impact upon the Full Services Commencement Date), and the proposed measures to be taken by the Company to overcome such changes;
  - (ii) any grounds for dispute which have occurred or which the Company reasonably believes are likely to occur, and the proposed measures taken by the Company to resolve such grounds for dispute;
  - (iii) all disputes which have occurred or which occur between the Company, the New Works Contractor, the Designer or the Design Checker which are material to the Design or construction and completion of the New Works and the proposed measures taken by the Company to resolve such grounds for disputes, but excluding any information that may be prejudicial to the commercial position of the Company or its associated companies;
  - (iv) the date on which the Company expects to achieve the Permit to Use for each Phase of the New Works and Final Completion; and
  - (v) such other reports as may be required to be produced by the Company so as to comply with the requirements of third parties excluding all internal Company reports.

#### 4.2. As Constructed Records

- 4.2.1. Notwithstanding any other requirements of this Agreement the Company shall supply to the Contracting Authority within 7 days from the date of issue of a Permit to Use for any Phase, the associated as constructed records as follows, but not limited to:
- (i) "As Built" Drawings as specified in the Health and Safety File within paragraph B of SD 11 Annex A of the MCHW;
  - (ii) "As Built, Operational and Maintenance Records for Trunk Road Structures" in accordance with BD62 of the DMRB;
  - (iii) for Design Elements, other than road Structures, one copy of each of the drawings specified in paragraph 4.2.1(i), including the landscape drawings, on A1 size paper unless otherwise agreed with the Contracting Authority clearly marked "As Built Drawing" in red;
  - (iv) the requirements for road Structures drawings and photographs as referred to in BD62 of the DMRB;
  - (v) a construction report identifying the actual types of materials and construction methods that were used throughout the New Works.

The construction report shall include, but shall not be limited to:

- (a) summarising the information obtained by the laboratory or field tests on the road materials employed in the New Works;
  - (b) commenting on the remedial and corrective actions taken;
  - (c) discussing points of interest or the use of “unusual” and “special” materials and methods of construction;
  - (d) a statement setting out the problems and defects encountered during the construction of the New Works and how such problems were overcome and/or such defects rectified; and
  - (e) record material compliance, other than that provided within paragraph 4.2.1(vi), such as certification, quality assurance, external testing and otherwise.
- (vi) A complete record of sampling and testing data for materials incorporated in the New Works in bound hard copy format unless otherwise agreed with the Contracting Authority. Each of the individual records shall include, in addition to the sampling and testing data:
- (a) the date;
  - (b) the supplier;
  - (c) the source of material; and
  - (d) a statement of compliance or otherwise with the Specification.

Such records shall be consistently referenced to either chainage or specific location(s) within the New Works.

- (vii) Traffic Scotland documentation including, but not limited to, the following information:
- (a) as constructed drawings;
  - (b) equipment and system documentation;
  - (c) certification and test documentation;
  - (d) software documentation;
  - (e) maintenance and service manual;
  - (f) operational manual;
  - (g) system documentation;
  - (h) New Works Site records; and
  - (i) TR1100 documentation.

- (viii) as constructed physical survey results, including co-ordinates and drawings of all permanent fencelines, including Accommodation Works fencelines.

4.2.2. In addition to the requirements for hard copies of submitted information, drawings and text stated in this Section, four copies shall also be supplied in digital Adobe PDF format on compact disc (CD Rom). Digital copies of drawings shall be supplied in Adobe PDF format and AutoCAD format using the latest version of AutoCAD current at the date of completion of the Health and Safety File.

Other digital information shall be supplied in Adobe PDF Format and Microsoft software or equivalent format as agreed by the Contracting Authority.

- 4.2.3. One hard copy and one digital copy of the sections of the Health and Safety File relevant to local authority controlled roads shall also be supplied to each local road authority affected.

Four weeks after the issue of the Permit to Use for any Phase of the New Works the Company shall undertake traffic surveys of all intersection(s), junction(s) and roundabout(s) to ensure that the intersection(s), junction(s) and roundabout(s) are operating in accordance with the Design. The results of the survey(s) shall be made available to the Contracting Authority within 2 weeks of the survey(s).

**1. General**

- 1.1 The Company shall comply with the requirements of a Relevant Authority / third party detailed in this Part 7 of these New Works Requirements.
- 1.2 Where within this Agreement there is a requirement to consult with a Relevant Authority / third party the Company shall identify the Relevant Authority / third party and comply with their requirements whether or not such requirements or the Relevant Authority / third party are identified within this Part 7 of these New Works Requirements.
- 1.3 Where as a consequence of consultation with a Relevant Authority / third party a requirement is specified which contradicts any other requirement of this Agreement, the Company shall discuss such with the Contracting Authority and where appropriate shall introduce a Company Change in accordance with Clause 35.
- 1.4 The Company shall consult with those Relevant Authorities / third parties detailed in this Part 7 of these New Works Requirements as appropriate, and shall where reasonable take account of comments received.
- 1.5 Reference to those Relevant Authorities or third parties within this Part 7 of these New Works Requirements shall mean these Relevant Authorities or third parties or their successor(s).
- 1.6 The Company shall take all necessary measures to avoid causing damage to Apparatus. The Company shall make its own detailed inquiries of the Relevant Authorities and third parties and shall satisfy itself as to the existence of the exact position of any such Apparatus and the depth, size and gradient thereof.
- 1.7 The Company shall provide Consultation Certificates in accordance with the Certification Procedure.
- 1.8 The terms “works” and “Works” in Appendix 1 shall be taken to mean the New Works whenever the context is relevant.
- 1.9 The term “Company” in Appendix 1 shall be taken to mean the Relevant Authority unless the context indicates otherwise.

**2. Relevant Authorities / Third Parties**

- 2.1 Subject to paragraph 1.2 above the special requirements of certain Relevant Authorities / third parties have been reproduced in a form provided by them.
- 2.2 Where necessary, the Company shall establish with the Relevant Authority / third party the definition of terms within each of the special requirements as applicable to the New Works.
- 2.3 Without prejudice certain terms have been related to the definitions given in this Agreement. Where this has been done the terms are detailed at the start of each of the special requirements.

**APPENDIX 1**

## **Appendix 1A - Special Requirements in Relation to Working on Trafficked Highways**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement; and

**“Contract”** means the Agreement

These Special Requirements relate to the North East Trunk Road Network.

Furthermore, these Special Requirements relate to the incumbent (April 2013) 3G Operating Company. Contact details for the succeeding Operating Company will be provided following the award of the Transport Scotland 4G Operations and Maintenance Contract for the North East network.

### **Conditions and general requirements for Applicants wishing to carry out works on the North East Scotland Trunk Road Network.**

All traffic management must be in strict accordance with the Traffic Signs Manual - Chapter 8 and BEAR Scotland Ltd will only deal with the applicant. The following points must be adhered to when making application and whilst occupying a slot on the network:

- (a) Applicants **must** notify ‘Traffic Scotland’ 15 minutes prior to placing the first cone on the network and again when all Traffic Management is lifted by telephoning **0141 287 9283**.
- (b) Signs must be erected of an appropriate size to display the name and telephone number of the organisation undertaking the works.
- (c) All traffic management must be in strict accordance with TSM Chapter 8.
- (d) All vehicles must comply with clause 2.2.1 of the Traffic Signs Manual (TSM) - Chapter 8 volume 1 (1991).
- (e) All site personnel must wear approved high visibility clothing as per Clause 1.4 of TSM Chapter 8.
- (f) All traffic management equipment must be kept in clean and proper order throughout the duration of the works.
- (g) Two hourly checks are required on all traffic management works. These must be undertaken and recorded for all works including overnight works. Checks must be carried out and recorded.
- (h) The attached network access form must be completed in full. The following information must accompany the completed form.
  - (i) Method statement for the works
  - (ii) Traffic management layout drawing
  - (iii) Contact names and addresses for the works including night-time cover.
- (i) BEAR Scotland Ltd and Her Majesty’s Constabularies reserve the right to remove or have removed any traffic management works, if safe to do so, should exceptional circumstances arise, e.g., a road traffic accident.
- (j) The BEAR Scotland Ltd network is subject to restricted working hours on certain sections. These will be detailed if applicable. It is the responsibility of

the applicant to seek clarification of any restrictions that may apply before commencing work.

- (k) Central reserve signs for any dual carriageway or motorway must be established using the Mobile Lane Closure technique as detailed in Volume 8 Section 4 of the DMRB (ref. TD49/97). This process must be strictly adhered to.
- (l) Works of type A will be subject to discussions with the local Police prior to a slot on the network being allocated.
- (m) BEAR Scotland Ltd will have the final decision on allocation of slots on the network. **This decision is non-negotiable.**
- (n) A minimum notice period of four weeks is required for works of one-week duration or less. A six-week minimum notice will be required for works over a one-week period. This does not affect the Statutory Undertakers Emergency powers.
- (o) Requests that involve emergency works/repairs will be treated on their individual merits.
- (p) For works that require a Temporary Traffic Regulation Order i.e. road closure, speed limit and contraflow a minimum notice period of twelve weeks will be required to allow for consultation with relevant parties i.e. Bus Companies, Local Authorities, Police, etc.

Telephone: 0845 413 0200

---

**CLOSURE TYPE A, B OR C**

**TYPE A:** are those systems, which are allowed to remain in operation in all traffic flows and visibility conditions. They include all systems involving contraflows and other works of long duration.

**TYPE B:** are those systems which are allowed to remain in operation when the traffic demand is less than the available carriageway capacity when the System is in place and there is good visibility. If the work cannot be completed within the allocated time for completion, then, either the Traffic Management System is to be removed and normal traffic conditions reinstated, or additional signing and lamps to the standard of a TYPE A Traffic Management System is to be installed.

**TYPE C:** similar to TYPE B but the majority of traffic signs required are vehicle mounted. They are carried out when traffic flows permit, in good visibility and generally in daylight although night time systems are permissible. They include continuous mobile operations as well as those, which involve movement and periodic stops of short duration.

**NOTIFICATION/APPLICATION FOR INSTALLATION OF PORTABLE TRAFFIC SIGNALS****CONDITIONS**

1. At least SEVEN WORKING DAYS NOTICE SHALL BE GIVEN for all works other than emergency and urgent works. For emergency and urgent works, e.g., when circumstances arise which could result in immediate danger to the public or serious damage to the road), this notice must be sent WITHIN TWO HOURS of work starting.
2. Wherever signal control is to be used at a works site, which contains or is near a JUNCTION two scaled plans showing the proposed temporary site layout must accompany this application. It is a STATUTORY REQUIREMENT for the Roads Authority to issue WRITTEN site approval BEFORE signals are installed, in these instances.
3. The signal equipment and traffic signs must satisfy fully all the requirements set out in the Traffic Signs Regulations and General Directions 2002, and all other relevant regulations, directions and technical memoranda.
4. Procedures, layouts and operations shall be in accordance with the "Safety at Street Works and Road Works – A Code of Practice" and "Traffic Signs Manual – Chapter 8".
5. The mode of operation of the signals shall be "Vehicle Actuation" to the Department of Transport's booklet "An introduction to the Use of Traffic Actuated Portable Traffic Signals" (the pink booklet), unless otherwise agreed by the Roads Authority in writing.

6. If an external supply of electricity is required for the operation of the signals a separate application must be made to Scottish and Southern Energy and to the Area Engineer (lighting section) for such a supply.
  
7. All apparatus whether hired or owned by the user will be subject to a "beck and call" maintenance contract. The user must establish a safe working method of traffic control within 2 hours of the notification of a fault or defect.
  
8. The apparatus must be inspected and tested before delivery to site and the user must satisfy the Roads Authority and Police that the equipment meets all the necessary requirements and that a competent person has made the pre-delivery check.

Further copies of this form may be obtained from:

**NOTIFICATION / APPLICATION FOR INSTALLATION OF PORTABLE TRAFFIC SIGNALS**

**SIGNALS MUST BE VEHICLE ACTUATED UNLESS OTHERWISE AGREED WITH BEAR SCOTLAND LTD**

|     |                                                                                                        |                                                                                                                                                                                                                          |
|-----|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| To: | <b>BEAR Scotland Ltd.<br/>6A Dryden Road<br/>Bilston Glen<br/>Loanhead<br/>Midlothian<br/>EH20 9TY</b> | (Please note there is a statutory requirement to notify BEAR Scotland Ltd. of all portable signal installations and it is necessary to obtain approval in writing for those sites, which contain or are near a junction) |
|-----|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

1. I (name of applicant).....  
 on behalf of (state firm, address and phone no.).....

Give notice of intention to place and operate portable traffic signals at (state location)

In accordance with the overleaf conditions. The intended dates of operations are:-

2. Start date and time ..... Will signals be operational at all times YES/NO  
 Finish date and time ..... If no please state times of operation.....

3. **BEAR Scotland Ltd must be notified within 48 hours of signals being removed from the carriageway.**

4. List below two named employees and the signal hire company contacts, (at least one of whom shall be available at any time), who are in the first instance, to be called out at any time by the Police or by BEAR Scotland Ltd to rectify signals which are not working or not working properly.

Named Contacts:-

| NAME                       | CONTACT ADDRESS and TELEPHONE No |
|----------------------------|----------------------------------|
| (a) (Employee).....        | Day .....                        |
|                            | Night .....                      |
| (b) (Employee).....        | Day .....                        |
|                            | Night .....                      |
| (c) (Signal Company) ..... | Day .....                        |
|                            | Night .....                      |

I agree to meet all costs which are incurred by BEAR Scotland Ltd in respect of the connection, operation and disconnection of the signals and in respect of giving emergency attention in the event that the "named contacts" cannot be reached or are unable to rectify any fault within 2 hours of the first notification that the signals or associated signing are faulty.

Address where invoices to be sent if different from above:-

Signed ..... Date ..... On behalf of .....

## Traffic Management Requirements

Where work is carried out on or adjacent to a road open to vehicles, all vehicles and mobile plant operating on or adjacent to that road in the execution of the operations shall be painted in a conspicuous colour as described hereafter:

- (i) All vehicles used in mobile lane closures as defined in Section 6 "Type C Works" in Chapter 8 of the Traffic Signs Manual shall be painted in non-reflectorised yellow (Colour No. 355 to BS381 C or similar). Similarly all vehicles engaged in Operations within unprotected trafficked lanes for example, setting up major traffic management layouts such as tapers and contraflows) on dual carriageways and other high speed roads shall be painted non-reflectorised yellow.
- (ii) All other vehicles undertaking Operations shall be generally light in colour preferably but not necessarily non-reflectorised yellow and/or provide, over the full width and height of the vehicle which is exposed to approaching vehicles, conspicuous markings and signs to define clearly that the vehicle is a roadworks vehicle.
- (iii) Vehicles shall have a sign board reading "Highway Maintenance" (to Diagram 740A of Schedule 12 Part V of the Traffic Signs Regulations and General Directions 1994) fixed at the rear. The lettering shall be 150 millimetres "x height" except that for light vans and cars it shall be the largest "x height" that can be accommodated out of the following heights: 37.5, 50, 62.5 or 100 millimetres. The lettering shall be block capital letters from the alphabet described in the Traffic Signs Regulations and General Directions 2002 Schedule 13 Part II on a yellow non-reflectorised background in accordance with BS 381, Colour No. 355. In addition all purpose vehicles and plant shall be provided with either roof mounted light bars or at least two amber flashing beacons and light vans and cars shall be provided with a roof mounted amber flashing distinctive lamp.
- (iv) All warning lamps shall be switched on when the vehicle or plant is manoeuvring into or out of the location of the Operations, operating at low speed on the carriageway or hard shoulder open to vehicles or standing on a carriageway or hard shoulder open to vehicles.

### Weekly Programme of Intent

Weekly Programme of Intent – The Contractor shall by **1200hrs** each following day, provide the Operating Company's Traffic officer with a detailed summary of Traffic Management Installation which have been in use on the Contract on each day, in the format attached.

### Daily Record of Traffic Installations

Daily Record of Traffic Installations – The Contractor shall by **1200hrs** each following day, provide the Operating Company's Traffic Officer with a detailed summary of Traffic Management Installations which have been used in the Contract on each day, in the format attached.

**Appendix 1B - Special Requirements in Relation to the Scottish Government Agriculture Food and Rural Communities Directorate**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

*“Contractor” means the Company as defined in the Agreement; and*

*“Contract” means the Agreement; and*

*“Engineer” means the Contracting Authority.*

**1. Special requirements in relation to the Scottish Government Agriculture Food and Rural Communities Directorate are as follows:**

Before commencing any work over any portion of the Site the Contractor shall confirm with Scottish Government Representative, details of any restrictions relating to the prevention of the spread of animal, plant and/or poultry diseases which may for the time being be in force relating to the Site and any surrounding land and/or access ways to which the Contractor or any sub-contractor employed by him may have to seek to gain entry for the purpose of the Works. The Scottish Government Representative, can be contacted at the following point:

|          |                                                                                                                                                                                                                                           |

2. The Contractor shall ensure that his employees or the employees of any sub-contractor employed by him shall avoid all contact with livestock on or adjacent to the Site and keep strictly to any route which has been agreed with any owner/occupier of land affected by the Works at all times.
3. Where it is necessary for the purpose of the Works to enter land on which livestock are or may be kept the Contractor shall take all precautions to prevent any livestock penetration from adjacent land onto such land and/or contact between any livestock on that land and other livestock from adjacent land.
4. Where it is necessary for the purpose of the Works to enter land which is or has recently been occupied by livestock, the Contractor shall provide at each entry or exit to such land, appropriate arrangements for disinfecting all footwear and vehicles upon entry or exit from such land to the satisfaction of the Engineer. He shall ensure that all footwear and vehicles are cleansed of all dirt and mud before disinfecting with a clean disinfectant, regularly replenished at the correct dilution and which carries a valid citation on the label certifying approval by Scottish Government Agriculture Food and Rural Communities Directorate.
5. The Contractor shall not enter buildings occupied or used by livestock for the purpose of the Works without the express written consent of the owner/occupier. When such

- entry is necessary, rubber boots and protective over garments of an appropriate type shall be worn at all times which shall be disinfected upon the entry and exit from such buildings in accordance with the instructions given at paragraph 4 above.
6. Notwithstanding any other provisions within the Contract the Contractor shall take all necessary precautions to ensure that streams, ditches and water troughs are not polluted as a result of carrying out of the Works and that ditches and drainage outfalls are adequately protected from damage pollution and/or silting to the satisfaction of the Engineer.
  7. The Contractor shall ensure that litter and/or debris resulting from the Works is not left or allowed to accumulate on or adjacent to the Site in areas accessible to livestock. The Contractor shall particularly make every effort to remove discarded foodstuffs remaining from human consumption - these may carry infectious agents harmful to livestock.
  8. The Contractor shall ensure that all gates are kept closed and appropriately secured and shall make every effort to avoid damage to fences, hedges, trees and walls in order to prevent livestock from straying. Where such damage does occur the Contractor shall take immediate action to secure any resulting breach from the penetration and/or escape of livestock and immediately thereafter notify the Engineer who shall consult the owner/occupier as appropriate.
  9. In addition to the above requirements the Contractor shall take all necessary precautions to protect farmers' stock herds against the risk/spread of Brucellosis. Such precautions shall include, but not be limited to, the provision by the Contractor at each entry or exit to such land, appropriate arrangements for disinfecting all footwear and vehicles upon entry or exit from such land to the satisfaction of the Engineer. He shall ensure that all footwear and vehicles are cleansed of all dirt and mud before disinfecting with a clean disinfectant, regularly replenished at the correct dilution and which carries a valid citation on the label certifying approval by Scottish Government Agriculture Food and Rural Communities Directorate.
  10. The Contractor shall strictly comply with any restrictions and/or precautions relating to the movement of soil which may be requested by the Scottish Government Agriculture Food and Rural Communities Directorate in the interest of restricting the spread of crop diseases, such as (but not restricted to):
    - (i) Rhizomania (affecting beet)
    - (ii) Red Core Disease (affecting strawberries)
    - (iii) Wart Disease (affecting potatoes)
    - (iv) Verticillium Wilt (affecting hops)
    - (v) Cyst Nematodes (affecting potatoes/beet)
  11. The Contractor shall strictly comply with any restrictions and/or precautions relating to the movement of soil which may be requested by the Scottish Government Agriculture Food and Rural Communities Directorate in the interests of preventing the spread of the following plant species:
    - (i) Japanese Knotweed
    - (ii) Giant Hogweed

In particular any soil or other such arising contaminated with or suspected of being contaminated with the rhizomes and/or roots of these species SHALL NOT be spread to areas currently free of these plants but shall be disposed of as directed by the Scottish Government Agriculture Food and Rural Communities Directorate Representative.

- 
- 12 The Contractor shall strictly comply with the Plant Health Order 2012 relating to the import and movement of ash seeds, plants and trees in order to prevent further spread of Chalara dieback of ash (*Chalara fraxinea*).
- 13 With regard to livestock diseases these include but are not restricted to :
1. Foot and Mouth Disease
  2. Newcastle Disease (Fowl Pest)
  3. Swine Fever
  4. Swine Vesicular Disease

Should an outbreak of any of the above highly infectious diseases occur in the area the Contractor and/or any sub-contractor employed by him shall not enter further upon any land and shall immediately inform the Engineer and request instructions. The Engineer shall consult with and seek instructions immediately from the Scottish Government Agriculture Food and Rural Communities Directorate Representative.

14 Carcase Burial Pits

- (i) Such pits contain the remains of animals which have been slaughtered for the purposes of containing certain diseases (particularly Foot and Mouth, but occasionally Anthrax). Unauthorised exhumation of such carcasses is illegal. Where there is prior knowledge that Carcase Burial Pits may exist in the area of the Works the Scottish Government Agriculture Food and Rural Communities Directorate Representative may be able to offer assistance in their location. However, if during the course of the Works a Carcase Burial Pit is encountered by the Contractor or any sub-contractor employed by him all work shall cease at that location and the Contractor shall appropriately secure that area of the Site against access and immediately inform the Engineer and request instructions. The Engineer shall consult with and seek instructions immediately from the Scottish Government Agriculture Food and Rural Communities Directorate Representative.

Compliance with the above requirements shall not relieve the Contractor of any of his obligations under the Contract.

---

**Appendix 1C - Special Requirements in relation to Scottish Natural Heritage**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement.

**1. Special requirements in relation to Scottish Natural Heritage are as follows:**

- (i) The Contractor shall take cognisance of the environmental importance of any area affected by the investigation and shall comply with all relevant legislation.
  - (a) The Contractor shall consult with Scottish Natural Heritage if any operation affects a statutory protected area, including but not restricted to, The River Dee Special Area of Conservation (SAC), Ythan Estuary, Sands of Forvie & Meikle Loch SAC, Special Protection Area (SPA) and Site of Special Scientific Interest (SSSI) and and Corby, Lily and Bishops Lochs Site of Special Scientific Interest (SSSI).
  - (b) The Contractor shall consult with Scottish Natural Heritage if any operation affects a statutory protected species. Where protected species are affected by the Works, the Contractor shall prepare and submit a Protected Species Licence Application, to include a mitigation strategy in advance to Scottish Natural Heritage which shall be agreed before such operations proceed.
  - (c) The Contractor shall provide the findings of pre-construction ecological surveys to Scottish Natural Heritage as part of on-going consultations.
  - (d) The Contractor shall consult with Scottish Natural Heritage before and during and works affecting The River Dee SAC and Corby, Lily and Bishops Lochs SSSI, and maintain written records of such consultations. Scottish Natural Heritage shall be informed of planned works a minimum of 7 days prior to commencing works within the SAC. Fence lines to secure and mark the boundary of the works adjacent to and within the SAC shall be inspected and agreed with SNH in advance of works commencing.

The Contractor shall meet all other requirements of the appropriate regulating body in respect of water quality, air quality and noise emissions.

Address: Scottish Natural Heritage  
Fodderty Way  
Dingwall Business Park  
Dingwall  
IV15 9XB

Tel: 01349 865333

- (ii) The Contractor shall liaise with the Ecologist appointed by SNH and inform the Contracting Authority a minimum of 7 days prior to commencing Works in any environmentally sensitive areas as identified at the start of the contract.

---

**Appendix 1D - Special Requirements in relation to Historic Scotland****1. Undiscovered remains**

Under principles and procedures agreed between Historic Scotland (HS) and the Contracting Authority responsibility for the main programme of archaeological mitigation work (i.e. archaeological excavation and recording) along the route of any trunk road scheme lies with the Contracting Authority through Historic Scotland. Archaeological evaluation and mitigation works are planned to be completed by the start of construction; however undiscovered archaeological remains may still be present. The Company shall be aware that such undiscovered remains may be present and be revealed in the course of works. In such circumstances the Company shall ensure that procedures are in place to draw upon the services of an appropriately qualified Archaeological Contractor to liaise with Historic Scotland and to advise on and oversee necessary protection and mitigation measures.

**2. Control of Ancillary Works**

- (a) Where not already assessed within the Environmental Statements for the Schemes, the Company shall engage an appropriately qualified Archaeological Contractor to advise on the location, outwith the road line, of all Constructional Plant and temporary Works including borrow pits, spoil heaps, surplus soil disposal areas, haul roads, work camps, material storage areas. These may be on areas of land out-with the locations fully studied during the scheme assessment process.
- (b) The Archaeological Contractor shall have access to all Archaeological Reports on the Study Area prepared as part of the Environmental Assessment process. For works out-with the boundaries of the Study Area he shall undertake sufficient Desk Based Research and Fieldwork to identify the location, significance and extent of all sites of archaeological interest in the wider search area.
- (c) The Company shall make full use of the above information and the advice of his Archaeological Contractor to plan the works in accordance with current Government policy for the protection of the archaeological heritage. In general Works shall be planned to avoid significant archaeological features.
- (d) Currently no Scheduled Monument Consent is required. Should Works out-with the areas addressed in the Environmental Statements be required, prior to Works of any type within the boundary of any Scheduled Areas or Scheduled Ancient Monuments. Any application for Scheduled Monument Consent shall include a detailed specification for any proposed fieldwork mitigation. If Scheduled Monument Consent is granted, no Works may take place until Historic Scotland has approved the results of the fieldwork mitigation. Early contact with Historic Scotland is vital if works of any kind are proposed or suggested within, or within 50m of the boundary of, any Scheduled Monuments or Scheduled Areas.
- (e) For areas which the Archaeological Contractor research suggests may be archaeologically sensitive but the full potential remains uncertain, prior archaeological evaluation may be required to identify appropriate mitigation.
- (f) Where it has been determined that archaeological site(s) should be preserved but they lie so close to any proposed Works that they may be at risk from inadvertent damage, the Company, using the advice of his Archaeological Contractor, shall arrange for temporary fencing to be erected around the site(s) prior to works commencing. If any Scheduled Monuments or Areas are involved, Historic Scotland's prior written agreement must be sought on the area to be fenced. No Works of any nature will be permitted within these fenced-off areas.

- (g) For any Works requiring Planning Permission, the Company shall submit to the planning authority, as part of his planning application, a statement of his archaeological assessment of the area, the implications of his development upon it and the details of any archaeological mitigation proposed.

### 3. Design and Mitigation: Methodologies

The Design and mitigation shall be in accordance with current good practice guidelines within Scotland including, but not limited to, the following:

- (a) Association for Environmental Archaeology 1995 Environmental Archaeology and Archaeological Evaluations, Working Paper No. 2;
- (b) Brown, D., 2007 Archaeological Archives: A guide to best practice in creation, compilation, transfer and curation, Archaeological Archives Forum;
- (c) English Heritage, 2010 Waterlogged Wood: Guidelines on the Recording, Sampling, Conservation and Curation of Waterlogged Wood;
- (d) English Heritage, 2011 Environmental Archaeology a guide to the theory and practice of methods, from sampling and recovery to post-excavation, 2nd Edition;
- (e) Faegri, K. et al, 1989 Textbook of Pollen Analysis, 4th edition;
- (f) Garratt-Frost, S., 1992 The Law and Burial Archaeology, IfA Technical Paper No. 11;
- (g) Hall, A., 1995 Environmental archaeology and archaeological evaluations: Recommendations concerning the environmental archaeology component of archaeological evaluations in England, Working Paper 2, Association for Environmental Archaeology;
- (h) Historic Scotland, 1996, Project Design, Implementation and Archiving (Historic Scotland Archaeological Procedure Paper 2);

**Appendix 1E - Special Requirements in Relation to the Scottish Environment Protection Agency**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement.

Special Requirements in Relation to the Scottish Environment Protection Agency (SEPA) are as follows:-

**1. The Contractor shall comply with the Water Environment (Controlled Activities) (Scotland) Regulations 2011.**

The Control of Pollution Act 1974 (COPA 1974) which controlled discharges of poisonous, noxious or polluting substances and trade and sewage effluents to controlled waters in Scotland, was replaced by the Water Environment (Controlled Activities) (Scotland) Regulations 2011 (CAR), which came into force in March 2011 (superseding CAR 2005 which came into force in 2006).

It is important to undertake early consultation with SEPA to discuss any proposals for engineering activities, point source discharges, abstractions or impoundments in or near the water environment as it is an offence under the 2011 Regulations to carry out the majority of these controlled activities without a CAR authorisation.

Further details are provided in the Practical Guide on CAR via the web link below:

[http://www.sepa.org.uk/water/water\\_regulation.aspx](http://www.sepa.org.uk/water/water_regulation.aspx)

**Appendix 1F - Special Requirements in Relation to Scottish Water**

*The terminology used in these Special Requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement; and

**“Contract”** means the Agreement.

1.1 Special requirements in relation to Scottish Water are as follows:

1.2.1 Scottish Water Authority supplies water and sewerage services.

In these Special Requirements the following terms shall have the meanings assigned to them:

**'Authority'** means the Roads Authority (RA) initiating the roads development.

**'Undertaker'** means **Scottish Water (SW)**.

**'Undertaker's Representative'** means the staff of the Scottish Water or its authorised representatives and/or agents.

1.2.2 The Contractor shall be assumed to be appointed by the Roads Authority (or Transport Authority) for the purposes of designing, constructing and/or managing the roads/transport scheme).

1.2.3 Before commencing any work or moving heavy plant or equipment over any portion of the Site the Contractor shall confirm details of all underground plant within the New Works Site.

1.2.4 At all times the contractor shall consider potential risks to SW apparatus and shall take measures to protect such apparatus, in line with best industry practice.

1.2.5 Before commencing any work involving the movement of heavy plant or equipment over any portion of a site, the Contractor shall confirm details of all underground plant within the site belonging to SW with the appropriate SW representative for the area and service involved. If necessary, trial holes shall be excavated to confirm position of SW apparatus. NB Trial holes shall only be done with the expressed permission of Scottish Water.

1.2.6 Where such details show a conflict between SW pipes or plant and the Contractor's works, the Contractor shall give Scottish Water at least two weeks notice of the date on which it is intended to commence such work or movement of plant and equipment in order that the presence of buried plant can be confirmed and indicated by markers.

1.2.7 The Contractor's method statement and safe system of work shall state clearly what measures are to be used to avoid damaging Scottish Water's apparatus and these shall be submitted to SW for consideration. The Contractor shall ensure that SW's plant is protected from damage, but if any damage should occur then SW shall be notified immediately.

1.2.8 The Contractor shall ensure that all method statements and risk assessments that are done which impact on SW apparatus are site specific, appropriate and comply with Scottish Water's Standards and Procedures. The Contractor shall submit completed method statements and risk assessments to SW for

information and comment and shall comply with SW's Distribution, Operations and Maintenance Strategy (DOMS) procedures.

- 1.2.9 Any damage to Scottish Water's apparatus shall be reported immediately to Scottish Water using the SW Call Centre number 0845 601 8855.
- 1.2.10 All costs due to damage to SW apparatus shall be charged to the third party that caused the damage. Costs charged may include any operational costs that were incurred by SW in order to mitigate loss of service and inconvenience to SW customers and hence these costs may be significant.
- 1.2.11 The following specific requirements must also be adhered to:
- (i) All surface apparatus within the site belonging to Scottish Water including manhole covers, toby covers, valve covers, gratings etc shall be identified on site in advance of the works commencing.
  - (ii) On completion of the works the contractor shall again identify the apparatus and check it is still accessible and functional and shall take immediate remedial action if that is not the case.
  - (iii) The level of covers shall be adjusted to suit the new scheme. Alternatively covers shall be replaced or renewed as appropriate to suit the new roads scheme.
  - (iv) Before any work is carried out in the vicinity of pipelines trial holes shall be carefully excavated by hand as required to confirm the position of the pipe.
  - (v) Assistance in tracing SW apparatus can normally be arranged by SW's local representative, who shall be contacted before any trial holes are excavated.
  - (vi) Allow, in general, at least 300 millimetres clearance horizontally and vertically round Scottish Water's pipes in order to allow future repair and maintenance work to be made to the pipe.
  - (vii) The Contractor shall provide appropriate consolidation on reinstatement in order to reduce the effect of subsidence on SW apparatus.
  - (viii) Mechanical excavation shall not be used at the vicinity of SW apparatus. Machinery working can be used but only if agreed by SW. (see SW document "Working in the Vicinity of a Live Main").
  - (ix) Fencing may be required at specific points to exclude access by mechanical plant except at designated crossing points where suitable protection to the main shall be provided. Bridging works may be required at pipe crossings.
  - (x) SW shall be consulted before a decision is made to use explosives within 400m of a water main.
  - (xi) Once exposed, a water main will be treated with the utmost care to prevent damage from any source. It shall be supported as necessary at all stages of excavation and back filling, to the satisfaction of SW. Only short lengths shall be exposed at any time with only one joint being exposed.
  - (xii) In the event of a marker being disturbed for any reason, it shall not be replaced other than in the exact position and to its former depth, unless the repositioning is carried out at the discretion and under the supervision of SW's representative.

- 
- (xiii) Written permission shall be obtained from Scottish Water before water is obtained from the Public Supply and in particular the use of fire hydrants is permitted but only if a Scottish Water licensed standpipe is used.
- (xiv) Scottish Water shall be consulted before any piling is carried out within 15 metres of a water main. Any piling works adjacent to SW apparatus shall be carried out to the recommendations of BS 5228-2:2009 and to SW local requirements. Scottish Water reserves the right not to accept any piling works (or other works) that may pose an unacceptable risk to SW apparatus.
- (xv) Damage to a water main however slight, and even if only to the coating of a pipe, shall be reported immediately to the Undertaker and work suspended and men withdrawn as appropriate until an opportunity to assess the extent of any repair necessary is given.
- (xvi) If traffic is required to cross over a water main on site then the crossing arrangements shall be designed by the contractor and submitted to SW for consideration and acceptance. Such arrangements shall be designed so as to limit loading and settlement on the pipe and to limit risk of damage to the asset to acceptable levels. To avoid doubt, it should be noted that the final responsibility for the crossing point design lies with the contractor.
- (xvii) Water mains are normally laid at between 750 millimetres and 1500 millimetres cover but larger mains often cannot follow minor variations in the ground contours readily and may be shallower or deeper than this.
- (xviii) Sewer pipe depths can vary from 750mm to over ten metres and present significant risks. The primary risks relate to
- a) Falling from heights due to deep manholes.
  - b) Noxious fumes and gases within the sewer system
- (xix) Under no circumstances must anyone enter a sewer on site and manhole covers should not be removed unless under SW's strict control arrangements.
- (xx) No work shall be done to the sewer or system without the expressed permission of Scottish Water by means of the issue of an Access Transfer Certificate.
- (xxi) Directional drilling or any other type of non-open cut installation of services shall not take place near Scottish Water plant or mains without written permission being given.
- (xxii) Where other apparatus or services are to be laid alongside a water main, a minimum separating distance shall be agreed on site. All trenches crossing the line of a water main shall be kept as near a right angle to the axis of the main as possible (i.e. shortest possible crossing).
- (xxiii) As part of the DOMS procedures and as part of the contractor's method statement, contingency arrangements may be required on site to cover the possibility of a SW asset being rendered inoperable by the contractor. Contingency arrangements should include
- a) Contact names and details
  - b) Contingency options
  - c) Emergency procedures
-

- (xxiv) Where it is necessary to lay new apparatus across and above a water main an appropriate distance shall be left between the bottom of the new apparatus and the top of the main. This shall be agreed with SW
- (xxv) Where apparatus shall pass below a water main the trench shall be excavated by hand. Care will be taken so as to avoid undermining the water main (or sewer) and proposals shall be submitted by the contractor and agreed with SW
- a) 48 hours notice of intention to back-fill under, over or adjacent to a water main shall be given to SW who then may arrange a representative to advise as to the suitability and consolidation of back-fill material over the pipeline.
- b) Backfill material shall be suitable excavated or imported inert material. Material shall be agreed with SW.

1.2.12 The following tree planting requirements must also be adhered to:

- (i) Before tree planting is carried out near mains approval shall be obtained from Scottish Water.
- (ii) The consent to plant trees will indicate what areas may be planted and also the type of trees.
- (iii) The only hardwood plants which cannot be planted directly across the water main are hedge plants such as Quickthorn, Blackthorn, etc. and these shall only be planted where a hedge is necessary either for screening purposes or to indicate a field boundary. Poplar and Willow trees shall not be planted within 10m of a water main.
- (iv) The following trees and those of similar size (be either deciduous or evergreen) shall not be planted within 6m of a water main or sewer e.g. Ash, Beech, most Conifers, Elm, Horse Chestnut, Lime, Maple, Oak, Sycamore. Apple and Pear trees also come under this category.
- (v) Raspberries, Gooseberries and Blackcurrant may be planted close to a water main or sewer but a 4m strip (1.5m each side of the water main) shall be left clear at all times.
- (vi) Dwarf Apple Stocks may be planted to within 3m of a water main or sewer.
- (vii) In cases where screening is required, the following are shallow-rooting and may be planted close to the mains or sewer:
- a. Blackthorn, Broom, Cotoneaster, Elder, Hazel, Laurel, Privet, Quickthorn, Snowberry and most ornamental shrubs.
- (viii) Christmas Trees (Picca Abies) may be planted to within 3m of the main or sewer. However, permission is given on the strict understanding that the Christmas Trees are clear felled at intervals not exceeding seven years.
- (ix) Before any landscaping is carried out near water mains approval shall be obtained from Scottish water.
- (x) Any consent to landscape will indicate the maximum and minimum depth of earth allowed to be added or subtracted to the overburden over the length of the pipe within which this applies. No heavy plant shall be used on or around the pipe without the express permission of SW in case of structural damage.

- 
- (xi) However, no landscaping over the length of the pipe and the indicated width on the consent will be allowed that would affect SW's ability to reach the pipe in the event of an emergency.

1.2.13 The following other requirements must also be adhered to:

- (i) The Contractor shall not allow material to enter the sewerage system or discharge to the sewerage system without the express permission of Scottish Water.
- (ii) In the event of any damage whatsoever to Water or Sewerage apparatus the Contractor shall immediately inform CUSTOMER SERVICES AT SCOTTISH WATER 55 BUCKSTONE TERRACE EDINBURGH EH10 6XH. TELEPHONE: 0845 601 8855. FAX: 0131 445 5040. (Ask for Service Request Desk).
- (iii) The contractor should liaise with one or more of the following:-
- a) Service Relocation team at 0141 355 5590 (For all NRSWA major Works projects in the first instance.
  - b) Scottish Water's local staff
  - c) SW Asset Delivery staff
  - d) Other SW employees as appropriate.

**Appendix 1G - Special Requirements in Relation to Aberdeenshire Council – Planning Department**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement.

1.1 Special requirements in relation to Aberdeenshire Council Planning Department are as follows:

1.1.1 The Contractor is required to comply with the special requirements of the following Planning and Environmental Departments, which should be contacted 7 days prior to commencement of the contract with full details of the proposed Works. Formartine Area

**Appendix 1I – NOT USED**

---

**Appendix 1J - Special Requirements in Relation to British Telecommunications Plc**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement; and

**“Contract”** means the Agreement.

Special requirements in relation to British Telecommunications Plc are as follows:

**In this Special Requirement the following terms shall have these meanings assigned to them:**

- a. **‘Company’** means British Telecommunications Plc (**“BT”**).
  - b. **‘Company Representative’** means the staff of BT, or its authorised representatives or Agents.
  - c. **‘Apparatus’** means all boxes, cabinets, poles and plant including any associated cabling and/or ducting owned by BT.
    - (i) All works in the public highway are subject to the New Roads and Street Works Act 1991, and the Promoter of the work is legally responsible to bear the cost of safeguarding Apparatus. The “highway” includes carriageway, verges, footpaths, etc.
    - (ii) Before commencing any work, or moving of heavy plant or equipment over any portion of the site the contractor shall confirm details of the Apparatus, owned, leased or rented by the Company, within the site with the Company Representative, who can be contacted as detailed in para.(xi).
- Apparatus maps are also available at [www.bt.com/btplant](http://www.bt.com/btplant). Please contact 0800 169 3849 for a user ID and password to access the system.
- (iii) Where such details show that the works or the movement of plant or equipment may endanger the Apparatus, the Contractor must give the Company Representative at least 7 days notice of the date on which it is intended to commence such works or the movement of plant or equipment in order that the presence of any sub-surface Apparatus can be indicated by markers to be supplied by the Company and placed by the Contractor under supervision of the Company Representative. The Contractor shall ensure that all Apparatus, particularly surface running cable, is adequately protected from damage and the Company Representative shall approve such protective measures. In the event of a Company marker being disturbed for any reason it shall not be replaced other than in the exact position and to its former depth unless the repositioning is carried out at the direction and under the supervision of the Company Representative.
  - (iv) In the event of a Company marker being disturbed for any reason it shall not be replaced other than in the exact position and to its former depth unless the

repositioning is carried out at the direction and under the supervision of the Company Representative.

- (v) The Contractor shall take particular care in relation to the protection of Apparatus, where such Apparatus includes the presence within the site of optical fibre and/or co-axial cabling. The Contractor shall make every effort to avoid the disturbance of the Company's network which, if damaged, can prove costly to reinstate. The Contractor shall make every effort to avoid the disturbance of Apparatus more than is absolutely necessary for the completion of the works in accordance with the Contract.
- (vi) When excavating, or backfilling around Apparatus, the Company Representative shall be given adequate notice, which should be not less than 7 days, of the Contractor's intentions in order that he may supervise the works. The Contractor should note that the normal depth of cover for Apparatus and ducts is as follows :-

(e) in footways 350 millimetres, which is to be maintained

(f) in carriageways 600 millimetres, which is to be maintained.

Where the 350/600 millimetres depth of cover cannot be maintained the Contractor shall carry out the instructions of the Company Representative for the protection of the Apparatus. Where the required depth of cover cannot be maintained over cabling, such cables may have to be diverted.

- (vii) All excavation adjacent to Apparatus is to be carried out by hand until the exact extent and/or location of Apparatus is known. Mechanical borers and/or excavators shall not be used within 1.0 metres of Apparatus or 2.0 metres of any pole without the supervisory presence of a Company Representative. To prevent any movement of Apparatus during excavation, complete shuttering shall be used as directed by the Company Representative if:
- (a) excavation is deeper than the depth of cover of adjacent Apparatus;
  - (b) excavation is within 1.0 metres of Apparatus in stable soil; or
  - (c) excavation is within 5.0 metres of Apparatus in unstable soil.

If for completion of the works the Contractor intends using any of the following:

1. pile driving equipment within 10.0 metres of Apparatus;
2. explosives within 20.0 metres of Apparatus; or
3. laser equipment within 10.0 metres of Apparatus

the Contractor shall advise the Company Representative, in writing, in order that any special protective measures for the Apparatus affected may be arranged.

- (viii) All Company manhole, joint box and/or other access points and chambers within the site shall be kept clear and unobstructed. Access for vehicles, winches, cable drums and/or any further equipment required by the Company for the maintenance of its Apparatus must be maintained at all reasonable times. The Contractor should particularly note the footway type chambers are not specified for carriageway loading and will need to be adequately protected and/or

demolished and rebuilt under supervision of a Company Representative where such chambers are likely to be placed at risk, either temporarily or permanently, from the movement of plant and/or equipment on the site. The Company Representative shall be given reasonable access to all Apparatus and chambers when required. Where BT installs Apparatus during the works this new Apparatus shall be treated as existing Apparatus for the purpose of these Special Requirements.

- (ix) For Frame and Covers that necessitate a change in level please contact the local office. If you wish to provide recessed frames and covers they will have to be supplied by the Company's agreed supplier. The Contractor must be prepared to supply and install such frames and covers in future, and must supply names of who will be liable for future maintenance.
  
- (x) In the event of any damage whatsoever to Apparatus the Contractor must immediately inform BT and report the occurrence as follows :

Call BT fault reporting on **0800 800 154**

**WARNING**

**Entry into all BT underground structures is prohibited to all unauthorised personnel.**

- (xi) For free on site assistance prior to commencement of works :

**Tel : 0800 0232023**

Fax : 020 8326 4050

E-mail : [dbyd@bt.com](mailto:dbyd@bt.com)

Seven working days notice is required.

(Office hours: Monday to Friday 08:00 to 17:00)

Compliance with the above requirements does not relieve the Contractor of any of his obligations under the Contract.

---

**Appendix 1K - Special Requirements in Relation to Scotland Gas Networks Ltd – Distribution and Transmission**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement;

**“Contract”** means the Agreement; and

**“Engineer”** means the Contracting Authority.

1.1 Special requirements in relation to Scotland Gas Networks Ltd are as follows:

1.1.1 In these Special Requirements the following terms shall have the meanings assigned to them:

**‘Company’** means Scotland Gas Networks Ltd.

**‘Company Representative’** means the staff of Scotland Gas Networks Ltd or its Authorised Representatives and Agents.

**‘Apparatus’** means all surface or sub-surface equipment and plant including any gas pipeline(s), main and/or service owned, leased or rented by Scotland Gas Networks Ltd.

1.1.2 Before commencing any work or moving heavy plant or equipment over any portion of the Site the Contractor shall confirm details of any Distribution and/or Transmission Apparatus within the Site with the Company Representative, who can be contacted at the following point:

Address: [REDACTED]  
Scotland Gas Networks Ltd  
95 Kilbirnie Street Glasgow  
G5 8JD

E-mail: [REDACTED]

Telephone: [REDACTED]

or for on-site location of plant:

Moleseye (was Susiephone) 0800 800 333

1.1.3 Where such details show that the work or the movement of plant or equipment on the Site may endanger any Apparatus, the Contractor shall give the Company Representative at least 7 days written notice of the date on which it is intended to commence such Works or the movement of plant and equipment in order that the presence of any sub-surface Apparatus can be indicated by markers to be supplied by the Company and placed by the Contractor under the supervision of the Company Representative. The Contractor shall ensure that all Apparatus is adequately protected from damage and such protective measures shall be to the satisfaction of the Company Representative.

1.1.4 In the event of a Company marker being disturbed for any reason it shall not be replaced other than in the exact position and to its former depth unless the repositioning is carried out at the direction and under the supervision of the Company Representative.

- 1.1.5 The Contractor shall carry out all works in connection with the Contract with reference to the requirements of the following publications:
- (i) Institute of Gas Engineers: IGE / SR / 18 Part 1 (1990), Communication 1947 - 'Safe Working in the vicinity of Gas Pipelines, Mains and Associated Installation' (Part 1: 'Operating at Pressures in Excess of 2 Bar').

**Health and Safety Executive (HSE): HS (G) 47 - 'Avoiding danger from underground services'.**

**Scotland Gas Networks Ltd Specification: T/SP/SSW2 - 'Code of Practice for Safe Working in The Vicinity of Scotland Gas Networks Ltd Transmission Pipelines and Associated Installations Operating at Pressures in Excess of 7 Bar'.**

In addition to the above document, the following Special Requirements shall apply to the road construction works within the vicinity of the Transmission network;

1. Planned diversions to SGN apparatus are based on the Specimen Design for the new road.
2. No variations from the specimen design of the new road at interface points with existing or proposed SGN apparatus shall be permitted without the prior written agreement of SGN Ltd.
2. The order of works for the SGN diversions shall be only as prescribed by SGN and shall not be subject to any outside interference.
3. 24 hour access to SGN apparatus and installations shall be maintained by the roads contractor at all times throughout the road construction works.
4. Any works associated with the new road, not covered by the Specimen Design, which impact upon SGN apparatus shall be subject to the conditions of this document, the relevant roads legislation, and the conditions outlined above.

**Scotland Gas Networks Ltd Cathodic Protection Policy T/PL/ECP1.**

- 1.1.6 The Contractor shall avoid the disturbance of Apparatus more than is absolutely necessary for the completion of the Works in accordance with the Contract. In particular 'Thrust Blocks' and other such support shall NOT be disturbed without the specific written approval of the Company Representative. The Contractor should particularly note that large diameter Gas pipelines may either be:
- (a) High Pressure pipelines frequently operating at pressures exceeding 7 bar; or
  - (b) Low, Medium and Intermediate pressure local distribution mains below 7 bar.

For differing reasons either type poses a considerable hazard to safety if damaged. The Contractor shall also note that smaller Gas distribution pipes may be of yellow plastic, cast iron, steel or other such material and that unless specifically known to the contrary any such services encountered during the course of the Works should be assumed to be Gas pipelines and treated as such in

- accordance with these Special Requirements until positively identified otherwise and the Engineer so notified in writing.
- 1.1.7 No vehicle plant or machinery shall cross, stand, operate or travel within 3.0m of any Apparatus particularly gas pipelines except as approved by the Company Representative. The Contractor shall agree his methods of working near any Apparatus with the Company Representative and ensure that any Apparatus is adequately protected from damage by the use of wooden sleeper tracks or reinforced concrete rafts at crossing points as appropriate. Temporary fencing of adequate strength shall be erected to regulate the movement of vehicles plant and machinery in the vicinity of Apparatus. All such protective measures shall be to the satisfaction of the Company Representative.
- 1.1.8 Where for the purposes of completing the Works in accordance with the Contract it is necessary to lay a new service across an existing Gas pipeline whether above or below, a minimum clearance of 600 millimetres shall be left between the outside of the Gas pipeline and the new service to be installed. Under no circumstances shall a new service be laid parallel above or below a gas pipeline. Hydraulic or other form of pressure testing of any new services shall not be permitted within 6.0 metres of any Gas pipeline unless precautions have been taken involving the use of pre-installation tested pipeline having a design factor of 0.3 for a distance of 6.0 metres either side of the Gas pipeline and/or such additional precautions including but not limited to sleeving barriers and the like as the Company Representative may require in consultation with the Engineer.
- 1.1.9 The Contractor shall particularly note that Gas pipelines and other Apparatus of the Company are usually cathodically protected to Scotland Gas Networks Ltd Policy T/PL/ECP1. The Company will require interaction tests to be carried out to determine whether its own system will be adversely affected by any new service and/or its protective measures. Any work requiring the removal modification and/or movement of Apparatus shall only be carried out by the staff of the Company and/or its authorised contractors and Agents. In the event that any cathodic protection posts and/or associated Apparatus require to be removed replaced and/or moved for the purposes of the Works the Contractor shall give not less than seven days' written notice of the requirement to the Company.
- 1.1.10 When excavating or backfilling around Apparatus, the Company Representative shall be given not less than 3 days written notice, of the Contractor's intentions in order that he may supervise the Works.
- 1.1.11 Backfilling shall be in 150 millimetres layers, or as may otherwise be directed, consolidated layer by layer to the satisfaction of the Company Representative. Fill shall be free from flints, stones and carbonaceous material. Where slabbing reduces such depth, clean sand filling shall be used.
- 1.1.12 All excavation adjacent to Apparatus is to be carried out by hand until the exact extent and/or location of Apparatus is known. The Contractor shall note the following:
- (i) Mechanical borers shall not be used within 15 metres of Apparatus; and
  - (ii) Hand held power assisted tools shall not be used within 1.5 metres of Apparatus without the supervisory presence of a Company Representative.
- 1.1.13 To prevent any movement of Apparatus during excavation, complete shuttering shall be used as directed by the Engineer if:

- (i) Excavation is deeper than the depth of cover of adjacent Apparatus;
- (ii) Excavation is within 3.0 metres of Apparatus in stable soil; and
- (iii) Excavation is within 6.0 metres of Apparatus in unstable soil.

Where excavation results in the exposing of Gas pipelines or other Apparatus, protective timber cladding shall be applied to the Gas Pipelines or Apparatus to the satisfaction of the Company Representative and shall be maintained until such excavation is reinstated and backfilled.

1.1.14 If for the completion of the Works the Contractor intends using any of the following:

- (i) Pile driving equipment within 15.0 metres of Apparatus (or such greater distance as may be required to ensure that the MAXIMUM peak particle velocity as measured at the Apparatus does NOT exceed 25 millimetres per second);
- (ii) Explosives within:
  - (a) 400.0 metres of exposed Apparatus; or
  - (b) 100.0 metres of buried Apparatus.
- (iii) Hot Works welding and the like within 15.0 metres of Apparatus; and
- (iv) Hydraulic testing within 6.0 metres of Apparatus.

The Contractor shall advise the Company Representative, giving at least 7 days written notice, in order that any special protective measures for the Apparatus affected may be arranged. The Contractor SHALL NOT proceed with the use of any of the above without the written consent of the Company Representative.

- (iii) All Apparatus manholes and/or other access points and chambers within the Site shall be kept clear and unobstructed. Access for vehicles, winches and/or any further equipment required by the Company for the maintenance of its Apparatus, shall be maintained at all reasonable times and unless otherwise agreed in writing by the Company representative a clearance of 6.0 metres shall be allowed for such access.
- (iv) The covers to Apparatus manholes and/or other access points and chambers shall only be lifted under the direct supervision of the Company Representative. No employee of the Contractor or of any sub-contractor employed by the Contractor shall enter any chamber and/or Apparatus of the Company unless under the supervision of the Company Representative and in any case not before a gas check as specified by the Company Representative has been carried out in the presence of the Company Representative and such checks have shown it to be safe to enter the chamber and/or Apparatus. The Company Representative shall be given reasonable access to all Apparatus and chambers when required.
- (v) In the event of any damage whatsoever even of a minor nature to Apparatus particularly to Gas pipeline coatings and/or test leads the Contractor shall immediately inform the Engineer and report the occurrence by contacting the Company Representative. The Company Representative will arrange for repairs to be carried out.

## 2. Emergency Action

- 2.1.1 The following actions shall be taken by the Contractor in the event of a gas leak in any Apparatus:
- (i) Evacuate all personnel from the vicinity of the pipeline damage or leak.
  - (ii) Remove and/or extinguish all sources of ignition for a distance of at least 200 metres in all directions from the location of the leak. This precaution shall include a ban on the use of any electrical equipment falling within this limit.
  - (iii) IMMEDIATELY inform the Company, the Engineer and (if required) the Emergency services in that order.

**THE EMERGENCY TELEPHONE NUMBER OF THE COMPANY IS:**

**0800 111 999**

- (iv) Secure the area from the approach of all employee traffic and/or the general public.
- (v) Render every assistance to the Emergency Services and/or the Company as shall be requested for the purposes of mitigating damage arising from the leak and/or for the purposes of securing public safety.
- (vi) DO NOT ATTEMPT TO SEAL ANY LEAK OF GAS AT THE POINT OF DAMAGE
- (vii) Compliance with the above requirements shall not relieve the Contractor of any of his obligations under the Contract.

**Appendix 1L - Special Requirements in Relation to Scottish and Southern Energy – Distribution and Transmission**

All works subject to SSE terms and conditions and charging methodology, landowner / legal consents from third parties and the following;

HSE Documents:

- HSG47 Avoiding danger from underground services
- GS6 - Avoiding danger from overhead power lines

## Appendix 1M - Special Requirements in Relation to Network Rail

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement; and

**“Contract”** means the Agreement.

### Introduction

The railway is a particularly hazardous environment. The danger from train movements, overhead power lines, buried cables and electrified rails at ground level must not be underestimated. The Industry’s safety policy and safety management systems require the enhancement of some society legislation and the following Special Requirements in relation to Network Rail indicate areas where the legislative requirements are strengthened.

These requirements apply to all types of work on Network Rail land i.e. surveying, inspection, construction and maintenance.

### 1. Definitions

In these Special Requirements, the following terms shall have the meanings assigned to them:

- a. **‘Contractor’** means any person or company to whom a contract for the whole (or any part) of the Works is let and for whom the Other Party is the Contracting Authority.
- b. **‘Isolation’** means planned arrangements for the predetermined period for the interruption of traction electricity between defined locations.
- c. **‘Network Rail Company Standards’** means a standards document issued by Network Rail for its own use (as amended by Network Rail from time to time) in relation to the railway as a whole which applies to the performance of the Works.
- d. **‘Network Rail’s Representative’** means a person duly authorised to act on Network Rail’s behalf.
- e. **‘Other Party’** means a party which has contractual obligations to Network Rail under a works agreement in respect of the design, construction and maintenance of a bridge over or under the railway Infrastructure.
- f. **‘Possession’** means planned safety arrangements which control or prevent the normal movement of rail traffic on the Railway Infrastructure between defined locations and for a pre-determined period.
- g. **‘Railway’** means the Railway Infrastructure, Network Rail’s activities in carrying out the operation, maintenance and replacement of the Railway Infrastructure, and traffic on the Railway Infrastructure.
- h. **‘Railway Infrastructure’** means Network Rail’s Infrastructure and operational track.
- i. **‘Safety Personnel’** means the personnel required to implement safe working practices on or about the Railway Infrastructure.

- j. **'Service'** means electricity cables, gas pipes, water pipes (including piped sewage), other pipelines or signalling telecommunication plant cables and equipment irrespective of owner.
- k. **'Temporary Speed Restriction'** means a planned restriction on the speed of rail traffic between defined locations for a specific period of time.
- l. **'The Works'** means the design and construction, and where the Other Party is obliged to carry it out, the maintenance of a bridge over or under the Railway Infrastructure and all tasks incidental thereto.
- m. **'Work Site'** means any lands or other places, on, or under, in or through which the works are to be executed.

## 2. Access

### 2.1 Written Authority

Before any activity is undertaken in connection with the Works requiring access to land in the ownership of Network Rail, written authority shall be obtained from Network Rail's Representative for access to such land including the conditions under which such access will be granted.

### 2.2 Procedures for Safe Access to Railway Property

Robust procedures must be established and maintained to ensure safe access for all persons to land in the ownership of Network Rail in connection with the Works and such procedures must be submitted to Networks Rail's Representative for written approval prior to access being granted.

### 2.3 Trespass

No person shall be permitted to access land in the ownership of Network Rail beyond the agreed limits of the Works Site or access route for the duration of the Works.

### 2.4 Crossing the Railway Tracks

No person shall cross or convey constructional plant and/or materials across or along any railway track unless special arrangements are made and written consent obtained from Network Rail.

Where public rights of way exist over occupation and/or accommodation level crossings and/or bridges, these crossings shall only be used in the way that they are intended to be used by the public unless special arrangements are made and written

Only in very exceptional circumstances will the provision of a temporary level crossing be permitted. Where Network Rail is prepared to accept the provision of a temporary level crossing for constructional traffic and/or public use sufficient time must be allowed for obtaining the appropriate approvals and the period of notice required by Network Rail for making the necessary arrangements for carrying out the work.

## 3. Risk Management

### 3.1 Robust Procedures for Safe Access and for Safe Working Practices

Systems, procedures and working practices that avoid risk to the Railway arising from the Works and that protect those persons involved in the execution of the Works from risks arising from the Railway must be developed and implemented in conjunction with the Contractor's Health and Safety Plan, as defined in the Construction (Design and Management) Regulations 2007 (as amended from time to time). These shall be submitted to Network Rail's Representative for written approval prior to the Works being undertaken.

Specific training (i.e. Personal Track Safety Training) and competency requirements apply to persons who work on the Railway Infrastructure or require access on or near the line. The training and competence requirements of the Works must be agreed in writing with Network Rail's Representative before access is allowed.

### **3.2 Services**

A full survey must be undertaken to ascertain the location and nature of all services within the Works Site or access route(s). All necessary protective measure must be incorporated and implemented to the satisfaction of the Network Rail's Representative.

The degree of existing protection provided to Services on or about the Railway Infrastructure can vary. Therefore Services must not be interfered with or moved unless authorised by Network Rail's Representative.

Additional precautions must be taken by the Contractor to establish the existence, position and location of any buried Services which may be present before any excavation, or the driving of objects into the ground, is undertaken. All necessary precautions shall be taken by the Contractor to avoid damaging buried Services when excavating, surcharging and driving object into the ground.

Should any unknown or unexpected Service be discovered or uncovered during the Works, the works in the vicinity of the Service must stop, ownership must be established, Network Rail and the owner of the Service must be informed and appropriate precautions for protection must be taken prior to recommencing the works.

Any service not diverted must be supported, maintained, protected as necessary and kept in working order in its existing location.

Where temporary or permanent service diversions are necessary a method and routing specification must be agreed with Network Rail's Representative. The service provided shall be maintained at all times unless otherwise agreed with Network Rail's Representative.

Any equipment (Cable Avoiding Tools (CATS) for example) utilised to establish the position of buried Services must be of a type approved by Network Rail for use on the Railway Infrastructure.

### **3.3 Use of explosives**

Explosives must not be used on or about the Railway Infrastructure without the prior written agreement of Network Rail. Evidence of full compliance with all current legislation relating to the acquisition, storage, keeping and use of explosives must be provided.

### **3.4 Protection to Railway Equipment**

Special protection to prevent damage to the tracks, signal and telecommunication equipment and all other railway equipment and contamination of track ballast during the execution of the Works shall be

designed, constructed, maintained and removed on completion of the Works or as otherwise directed by Network Rail's Representative.

### **3.5 Confined Spaces**

A considerable number of confined spaces exist on or about the Railway Infrastructure. In carrying out the Works all Contracting Authority's and contractor's personnel must fully comply with the requirements of the Confined Spaces Regulations 1997 and the associated Approved Code of Practice.

## **4. Programming of the Works**

### **4.1 Possessions, Isolations and Temporary Speed Restrictions**

The use of Possessions, Isolations and Temporary Speed Restrictions should be avoided to minimise disruption to railway traffic. If the need for Possessions, Isolations and Temporary Speed Restrictions cannot be avoided then they shall only be carried out on dates and at times agreed in writing by Network Rail's Representative.

The notice periods for booking of Possessions, Isolations and Temporary Speed Restrictions are dependent upon the duration and location of the Works. At the earliest opportunity advice should be sought from Network Rail's Representative as to the requirements for booking Possessions, Isolations and Temporary Speed Restrictions.

### **4.2 Initial Programme**

An initial programme for the Works must identify the key construction activities timing constraints and indicate when Possessions, Isolations and Temporary Speed Restrictions are being sought.

### **4.3 Programme Development**

The programme shall be developed taking account of comments from Network Rail's Representative and must be reviewed from time to time as required.

Network Rail may cancel or alter the dates and times of any agreed Possessions, Isolations and Temporary Speed Restrictions at short notice, if this proves necessary because of the overriding operational requirements of the Railway. If this occurs alternative arrangements will be made as soon as the situation permits.

## **5. Method Statements**

Method Statements must include a comprehensive step-by-step account of how the relevant part of the Works will be executed (incorporating where necessary maintenance and subsequent removal) including:

- Working times
- Access routes and location plan
- Plant usage and backup (including equipment and operator certificates)
- Superintendence, inspection and monitoring arrangements
- Temporary works

and as appropriate supported by:

- Design statements
- Drawings and cross sections
- Site and Ground Investigation reports including geotechnical interpretive reports
- Calculations
- Settlement, noise, vibration predictions
- Design check certificates
- Risk mitigation measures
- Storage, movement and clearance of materials and equipment
- Temporary or permanent diversion of services
- Earthing and bonding arrangements near electrified equipment
- Use of Surveying equipment

Method statements for works to be carried out in Possessions, Isolations and Temporary Speed Restrictions must also include a detailed programme for each work item, which must identify critical path activities and include contingency planning i.e. standby plant and equipment etc.

Method statements must be submitted for full consideration, comment and/or approval by Network Rail's Representative in sufficient time to allow for comments to be incorporated and revised proposals to be resubmitted as necessary.

## 6. **Site Management**

### 6.1 **Site Representation**

At the request of Network Rail, the Contractor or the Other Party must appoint a full time senior representative at the Work Site during the course of the Works.

### 6.2 **Training**

Prior to the commencement of and during the Works, familiarisation training and briefings shall be given to everyone who has access to the Works Site. Records of training and briefings are to be retained on the Works Site for inspection. Certain activities carried out during the Works may require railway specific training. These activities shall be identified and notified to the Contractor by Network Rail's Representative when the initial programme of works is submitted.

### 6.3 **Contact Names and telephone numbers**

Prior to commencement of works on the Works Site Network Rail's Representative must be provided with a list of names and telephone numbers for personnel responsible for organising remedial action in the event of an emergency on the Work Site when the Works Site is unattended.

### 6.4 **Accommodation for Network Rail's Representative**

Serviced accommodation for the use of Network Rail's Representative shall be provided in line with the requirements of and to the satisfaction of Network Rail.

### 6.5 **Advertisements**

Advertisements must not be displayed on or about land in the ownership of Network Rail without the prior written consent of Network Rail.

#### **6.6 Working Time**

The Railway (Safety Critical Work) Regulations 1994, and the supporting guidance documents, place strict limitations upon the hours that can be worked by persons who undertake Safety Critical Work as defined by the regulations. During the Works contractors who have employees carrying out Safety Critical Work must be able to demonstrate compliance with the regulations.

#### **6.7 Knowledge and Understanding of English**

Supervisory staff on the Works must have sufficient knowledge of English (both spoken and written) to understand and relay safety information, instructions and training to all personnel.

#### **6.8 Alcohol and Drugs**

All personnel engaged in the Works must comply with Network Rail's current Policy on Alcohol and Drugs. A copy of this will be provided by Network Rail's Representative.

#### **6.9 Clothing and Personnel Protective Equipment**

All persons engaged in the Works must wear high visibility clothing of an approved colour, type and design (including retroreflective strips) acceptable to Network Rail. The personnel protective clothing must be worn correctly and kept in a clean condition.

#### **6.10 Removal of Contractor's Employees**

Network Rail may object to and require the immediate removal from the Works Site of any person thereon who in the opinion of Network Rail's Representative is not in a fit condition to carry out their duties, or is liable to endanger their own health and safety or that of others. Such persons will not be permitted further access to the Works Site without the written agreement of Network Rail's Representative.

#### **6.11 Registers and Certificates**

All registers, site diaries and certificates relevant to the Works must be available for inspection by Network Rail at the Works Site or other locations agreed with Network Rail's Representative.

#### **6.12 Screens, Hoardings and Lights**

Temporary screens, hoardings, guard rails, barriers, fans, protective sheeting, fencing, etc, necessary to ensure the safety and protection of the Railway, the Works and all persons in the vicinity of the Works shall be designed, constructed, maintained and modified as appropriate and removed when no longer required in accordance with agreed method statements and shall not effect signal sighting, places of safety or affect or impair the vision of train drivers.

#### **6.13 Notifications of Accidents to Network Rail**

All accidents and occurrences causing damage to property or potentially affecting the safe working of the Railway; together with all Reportable Injuries and Dangerous Occurrences as defined in the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 (as amended from time to time) must be reported to Network Rail.

Details of all such events shall be recorded in a format agreed with Network Rail's Representative and a copy sent to Network Rail within 24 hours of any such event.

#### **6.14 Storage and Clearance of plant equipment and materials**

All plant equipment and materials shall be kept safe and secure when not in use and shall be located as to avoid opportunity for trespass and vandalism on or directed against the Railway or land in the ownership of Network Rail.

### **7. Working Methods near the Railway**

#### **7.1 Use of Plant and Equipment Adjacent to the Railway Infrastructure**

No construction plant, equipment or materials shall be used or handled in such a manner that in the event of mishandling or failure they come within a vertical plane 3.0 meters from the nearest edge of the nearest rail on which trains may run or, on a station platform, within 3.0 meters of the platform edge unless previously proposed in a method statement which has been accepted by Network Rail's Representative. (refer to paragraph 8.3.1)

#### **7.2 Stability of Track**

Excavation near the Railway Infrastructure shall be in accordance with agreed method statements and not commence until all measures required to monitor and maintain the stability of the track and/or structure have been implemented and Network Rail's Representative has indicated that there is no further objection to proceeding with the excavation work.

#### **7.3 Emergency Action**

A detailed procedure for dealing with emergencies relating to the Work Site shall be produced in consultation with Network Rail's Representative. This procedure shall be accepted in writing by Network Rail before work starts and shall be reviewed and updated as circumstances vary. Key actions shall be set out on a poster to be prominently displayed in locations to be agreed with Network Rail's Representative. These must include the method of stopping trains in the event of an incident that could affect the safety of trains and/or persons and, in the case of an electrified line, how to arrange to have the current switched off.

All staff and operatives shall be made fully conversant with this procedure. Auditable checks should be undertaken at intervals agreed with Network Rail's Representative to monitor this understanding and evidence thereof shall be maintained on site and available for inspection by Network Rail's Representative.

#### **7.4 Rail Traffic during a Possession or Isolation**

During a possession it may be necessary for engineers, trains and/or on-track machines to pass through the Work Site by prior arrangement. This will necessitate the temporary clearance of the railway track and cessation of those activities that could affect their passage or the safety of personnel on or near the line.

### **8. Electrified Railways**

#### **8.1 Electric Traction Equipment**

Attention is drawn to the presence in some areas of electric traction equipment associated with either overhead line equipment above and at track level and/or third or fourth conductor rails at track level. Either system carries a potentially lethal electric current and the close proximity to this equipment can cause death or severe injury.

Warning notices acceptable to Network Rail shall be erected in prominent positions agreed by Network Rail's Representative.

All requirements as advised by Network Rail as to the earthing and bonding (or electrical segregation) of metalwork and foil covered sheet materials shall be complied with.

## **8.2 Robust Procedures for Safe Access and Safe Working Procedures**

Further robust procedures (in addition to those referred to in paragraph 2.2) shall be established and maintained to ensure safe access for all persons to the Railway Infrastructure and safe working practices where the Railway Infrastructure is electrified. These procedures must be submitted to Network Rail's Representative for written approval prior to the Works being undertaken.

## **8.3 Precautions**

Electric traction equipment is charged at high voltage and unless Isolation and permit to work arrangements are in force shall be treated as being live at all times and the following precautions shall be observed:

### **8.3.1 Overhead Line Equipment**

Work shall not be carried out, cranes or other plant erected, operated and/or dismantled or materials stored within the prohibited space which is that space within a radius of 3.0 metres of the live overhead equipment together with anywhere vertically above this space.

The figure of 3.0 metres used in determining the prohibited space shall be increased by the length of any tool, equipment and/or material being handled. However, work on the track, platforms, walkways and the like below the overhead equipment is permitted without special precautions provided that tools, equipment and/or materials are not at any time raised above head height.

Long objects, which shall include but not limited to, pipes, scaffolds, poles ladders and/or long handled tools or any object of such length that if carried vertically could infringe on the prohibited space shall be carried horizontally below head height.

Electrically conductive surveying equipment shall not be used within 3.0 metres of any overhead line equipment or any rail.

Any disturbance of or any attachment to any equipment forming part of the electric traction system shall only be carried out with the full consent of Network Rail.

### **8.3.2 Third or Fourth Rail Electrification**

Work in the vicinity of the third or fourth rail electrification will involve the provision of special protection or isolations to the equipment.

Electrically conductive surveying equipment shall not be used within 3.0 metres of any rail inducing electrified third rail.

## **8.4 Protective Screens**

At the sole discretion of Network Rail's Representative it may be appropriate for protective screens adjacent to overhead line equipment or third/fourth rail electrification to be provided to enable certain works to continue without Isolations being required.

#### **8.5 Crash Decks**

At the sole discretion of Network Rail's Representative it may be appropriate for crash decks to be provided to enable certain works to be carried out above the Railway without Possessions and/or Isolations being required.

#### **8.6 Temporary Access Structures**

At the sole discretion of Network Rail's Representative it may be appropriate for a temporary access structure above the overhead line equipment to be provided to permit continued working without Isolations being required.

#### **8.7 Erection and Removal of Screens and Platforms**

Erection, inspection, maintenance and removal of screening and/or platforms and/or access structures shall be carried out under the protection of Isolations and Possessions unless otherwise agreed by Network Rail.

---

**Appendix 1N - Special Requirements in Relation to Cable & Wireless Worldwide**

*The terminology used in these special requirements shall have the meanings assigned to them as detailed in this section with the following amendments:*

**“Contractor”** means the Company as defined in the Agreement; and

**“Contract”** means the Agreement.

**“Company”** means Cable & Wireless Worldwide

Special requirements in relation to Cable & Wireless Worldwide are as follows:

**1. Introduction**

This document sets out the procedure that will apply when Other Parties intend or are undertaking works in the vicinity of Cable & Wireless Worldwide apparatus.

**2. Purpose of Document**

This document provides a means by which the Cable & Wireless Worldwide specific special requirements relating to their apparatus regardless of it being situated in the public highway / road, private street, land or any other areas is made aware to Other Parties.

**3. Scope**

This document will be presented to Other Parties or Contractors to encourage those undertaking works within the vicinity of Cable & Wireless Worldwide apparatus to refer to and comply with. This is in order to protect where necessary the Cable & Wireless Worldwide apparatus and to avoid damage to the apparatus and loss of service.

A National Joint Utilities Group (NJUG) document NJUG 9 titled “Recommendations for the Exchange of Records of Apparatus between Utilities” provides useful reference material.

It should be noted that, where appropriate, additional information on avoiding danger from underground apparatus is contained within the HSG47 guidance book titled “Avoiding Danger from Underground Services.”

**4. Cable & Wireless Worldwide Network and Apparatus**

Damage to Cable & Wireless Worldwide apparatus is extremely disruptive and can be expensive to repair, especially where long lengths of cable have to be replaced.

In order to maintain the network integrity and minimise disruption to service, it is essential that disturbances are absolutely minimal. When working within the vicinity of Cable & Wireless Worldwide apparatus, extreme care is necessary in order to avoid costly repairs. The Other Parties / Contractor shall make every effort to ensure that disturbance of Cable & Wireless UK apparatus is no more than is absolutely necessary for the completion of the works in accordance with their contract. It should be noted that

it is an offence to interfere with Cable & Wireless Worldwide apparatus without first contacting the company for advice.

## 5. Plant Records

It is the responsibility of the Other Parties undertaking works which may affect Cable & Wireless Worldwide apparatus to obtain all relevant Cable & Wireless Worldwide plant records from our agent Atkins Global prior to works commencing. This may be done by contacting the Atkins Global Plant Enquiries Team listed in section 19.

Plant records for such enquiries will generally be provided within 10 working days of receipt and in compliance with the New Roads and Street Works Act 1991 [NRSWA] requirements.

## 6. Definitions

The following definitions are applicable in this document:

1. "Apparatus" means all surface or sub-surface equipment and plant used by Cable & Wireless UK including any associated cables or ducts owned, leased or rented by Cable & Wireless Worldwide.
2. "Cable" means any polythene or other sheath containing optical fibres or metallic conductors.
3. "Depth of cover" means the depth from the surface to the topmost barrel of the duct nest, in the case of ducts encased in concrete, to the top of the concrete, and in the case of directly buried cable, the top of the cable.
4. "Jointing chamber" means any manhole, surface box or other chamber giving access to Cable & Wireless Worldwide apparatus or their network.
5. "Utility" means an organisation licensed to provide gas, water, electricity, Cable TV or telecommunications services.
6. "Developer" means an organisation licensed to develop industrial/residential premises or given licence to connect to utility apparatus.
7. "Contractor" means the individual, firm or company contracted to undertake the work for a Utility or Other Parties.
8. "Other Parties" means the Utilities, Highway Authorities, Developers, Street Authority (Roads Authority - Scotland).
9. "Site" means the location of, or in the vicinity of, the various works.

## 7. Requirements

Prior to commencing any work or moving heavy plant or equipment over any portion of the site, the Other Parties or Contractor shall notify Cable & Wireless Worldwide of their intentions. This may be done by contacting Cable & Wireless Worldwide, contact listed in section 19.

Upon receipt of this notification, Cable & Wireless Worldwide will identify if their apparatus is affected. If any Cable & Wireless Worldwide apparatus is affected by the works then they will arrange for the necessary records and confirm details of Cable & Wireless Worldwide apparatus and network operated within the affected area or adjacent to the proposed work site.

## 7.1 Location of Plant

It is the responsibility of the Other Parties or Contractors to undertake adequate plant location procedures. These may include searches for metallic cables which must be performed by actively inducing a signal in a cable conductor via a transmitter. A passive search is not considered sufficient.

Before applying a tracing signal to the Cable & Wireless Worldwide apparatus, the Other Parties or Contractors shall seek confirmation from Atkins Global that the Cable & Wireless Worldwide apparatus will not suffer any disruption to its networks normal workings as a result of the nature of the signal being induced.

## 7.2 Trial Excavations

Optic fibre cables are very susceptible to damage from excavation tools. They are not electrically conductive and cannot be located by radio induction methods. Once an approximate location is known, the exact location must be ascertained by means of hand dug pilot holes.

Where the work to be carried out by the Other Party or Contractor involves excavation in the vicinity of our clients' apparatus, the Other Party or Contractor shall, by trial excavation at his own expense, determine the exact location and depth of the Cable & Wireless Worldwide apparatus.

All excavations adjacent to the Cable & Wireless Worldwide apparatus are to be carried out by hand until the extent and /or location of the apparatus is known.

**All excavation work shall be executed in accordance with the current issue of Health and Safety series booklet HSG47, Avoiding danger from underground services.**

## 8. Depths of Cover

The Other Party or Contractor should note that the minimum depths of cover for Cable & Wireless Worldwide apparatus which shall be maintained together with specified separation requirements. Where the minimum depths of cover specified by Cable & Wireless Worldwide cannot be maintained, the Other Party or Contractor shall at their own expense, carry out the instructions of Cable & Wireless Worldwide requirements for the protection or diversion of their apparatus.

**The Other Party or Contractor should have particular regard to the possibility of encountering Cable & Wireless Worldwide apparatus (including ducts and cables), at depths of cover other than that reported.**

Surface cables (such as cables on bridges or walls) which are liable to be placed in danger from the Other Parties or Contractors works shall be protected, at the Other Parties expense, as directed by the Cable & Wireless Worldwide representative.

## 9. Separation

Reference should be made to HSG47 to ensure that adequate separation is achieved. The following details outline the specific requirements of Cable & Wireless Worldwide and capture the HSG47 requirements:-

### 9.1 High Voltage Cables

High voltage single core cables of 1000 V and above shall have a minimum clearance from Company Apparatus of 500 millimetres.

High voltage multi-core cables of 1000 V and above shall have a minimum clearance from Company Apparatus of 350 millimetres.

In exceptional circumstances where the above clearances cannot be maintained, the separating distance may be reduced to a minimum of 175 millimetres. In such circumstances, concrete, of a quality as directed by the Company Representative, must be inserted to completely fill the space between the High Voltage cable and the Company Apparatus, in accordance with the requirements of the Company Representative. Any further services must have a minimum clearance of 250 millimetres from the concrete.

## 9.2 Low Voltage Cables

Low voltage cables of less than 1000 V shall have a minimum clearance from Company Apparatus of 180 millimetres. In exceptional circumstances where the above clearance cannot be maintained, the separating distance may be reduced to a minimum of 75 millimetres.

In such circumstances, concrete, of a quality as directed by the Company Representative, must be inserted to completely fill the space between the services, in accordance with the requirements of the Company Representative. Any further services must have a minimum clearance of 250 millimetres from the concrete.

## 9.3 Ancillary Electrical Apparatus

Lamp posts, traffic posts and other such ancillary electrical apparatus shall have a minimum clearance of 150 millimetres from underground Company Apparatus and 600 millimetres clearance from above ground Company Apparatus.

## 9.4 High pressure gas mains and other Undertakers plant/equipment

High pressure gas mains shall have a minimum clearance of 450 millimetres from Company Apparatus. All other undertakers' plant and equipment, when running in parallel with Company Apparatus, shall have a minimum clearance of 200 millimetres. Where gas mains cross Company Apparatus, the minimum clearance shall be 200 millimetres. All other undertakers' plant and equipment, when running across Company Apparatus, shall have a minimum clearance of 100 millimetres. NJUG Volume 1, Guidelines on the positioning and colour coding of underground utilities' apparatus refers.

## 9.5 Other Undertakers plant

Other undertakers' plant and equipment which runs in parallel with Company Apparatus shall have a minimum clearance of 200 millimetres. All other undertakers' plant and equipment when running across Company Apparatus, shall have a minimum clearance of 100 millimetres.

## 9.6 Tramways

Each separating distance shall be individually agreed with the Company Representative.

## 10. Jointing Chambers

### 10.1 Protection

Footway type jointing chambers are not designed to withstand carriageway loadings.

Where such chambers are liable to be placed at risk, either temporarily or permanently, from vehicular traffic or from the movement of plant and/or equipment, they will need to be adequately protected. Alternatively, they may have to be demolished and rebuilt to carriageway standards, at the Other Parties or Contractors expense under supervision of Cable & Wireless Worldwide representative.

All Cable & Wireless Worldwide jointing chambers and / or other access points shall be kept clear and unobstructed. Access for vehicles, winches, cable drums and / or any further equipment required by Cable & Wireless Worldwide for the maintenance of its apparatus, must be maintained at all reasonable times.

### 10.2 Access

The covers to Cable & Wireless Worldwide jointing chambers and / or apparatus shall only be lifted by means of the appropriate keys and under the direct supervision of a Cable & Wireless Worldwide representative. Other Parties or Contractors shall not enter any Cable & Wireless Worldwide jointing chamber and / or apparatus unless under the supervision of a Cable & Wireless Worldwide representative and in any case not before the mandatory gas test has been carried out in the presence of Cable & Wireless Worldwide representative and such checks have shown it to be safe to enter the Cable & Wireless Worldwide chamber and / or apparatus. The Other Parties or Contractors shall be given reasonable access to Cable & Wireless Worldwide apparatus and chambers when required.

## 11. Notification Periods

Where the Other Parties or Contractors works or the movement of plant or equipment may endanger Cable & Wireless Worldwide apparatus, the Other Party or Contractor shall give the Cable & Wireless Worldwide agent Atkins Global at least 7 working days notice in writing of the intended date to commence operations.

No excavation should be made without first consulting the relevant Cable & Wireless UK apparatus layout drawings, which will be made available from the Cable & Wireless UK agent Atkins Global on request and allowing 28 working days for processing the relevant drawings. However, should this not be possible, direct contact should be made to the Atkins Global Bristol Plant Enquiries Team as soon as possible to assess the situation.

When excavating, moving or backfilling (including use of Foamed Concrete for Reinstatements – FCR) around Cable & Wireless Worldwide apparatus, Atkins Global (as agent for Cable & Wireless Worldwide) shall be given adequate prior written notice of the Other Parties or Contractors intentions, in order that the works may be adequately supervised. Such notice shall not be less than 3 working days.

## 12. **Excavation and Backfill**

All excavations adjacent to Cable & Wireless Worldwide apparatus are to be carried out by hand until the extent and or location of the Cable & Wireless Worldwide apparatus is known.

Use of mechanical borers and / or excavators shall not be used without the supervisory presence of a Cable & Wireless Worldwide representative or a given exemption.

Shuttering of the excavation or support to Cable & Wireless Worldwide apparatus, at the Other Parties or Contractors expense, shall be used as directed by the Cable & Wireless Worldwide representative.

At least 7 working days notice must be given to Cable & Wireless Worldwide in order that any special protective measures may be required to protect Cable & Wireless Worldwide apparatus, at the Other Parties or Contractors expense, when equipment such as pile driving, explosives, laser cutting high powered RF equipment or RF test gear, is to be used in conjunction with the works.

Other Parties or Contractors are advised to refer to the National Joint Utilities Group [NJUG] 4 Document which outlines the identification of small buried mains and services.

## 13. **Foam Concrete**

If foam concrete is being used as the backfill material, it shall not be used either above or within 500 millimetres of any Company Apparatus. A suitable material in accordance with the specification for the Reinstatement of Openings in Highways shall be substituted.

## 14. **Attendance of Company Representative**

If a situation requires the attendance on site of a Cable & Wireless Worldwide representative for a continuous period of more than 6 hours, suitable facilities shall be provided by the Other Party or Contractor, at their expense, to meet the office and ablution requirements. If a situation arises that requires urgent attention Cable & Wireless Worldwide will endeavour to attend site within 2 hours for all other occasions arising, 24 hours.

## 15. **Damage Reports**

In the event of any damage whatsoever occurring to our Cable & Wireless Worldwide apparatus, the Other Party or Contractor shall immediately inform Cable & Wireless Worldwide by contacting Julia Burgoyne, (for contact details please refer to section 19).

All relevant costs of any subsequent repair and / or removal of the Cable & Wireless Worldwide apparatus shall be charged to the Other Party or Contractor, irrespective of who affects the repair.

The above requirements do not relieve the Other Party or Contractor of any of their obligations under their contract.

**Appendix 10 – NOT USED**

**Appendix 1P - Not Used**

**Appendix 1Q - NOT USED**

**Appendix 1R – NOT USED**

**Appendix 1S – NOT USED**

**Appendix 1T - Special Requirements in Relation to Trafficmaster**

*Terminology used in these special requirements shall have the meanings assigned to them as follows:*

**“Contractor”** means the Company as defined in the Agreement; and

**“Contract”** means the Agreement

**“Overseeing Organisation”** means

**1.) In these Special Requirements, the following terms shall have the Meanings assigned to them:**

- a.) ‘Company’ means Trafficmaster Ltd
- b.) ‘Company’s Representative’ means the Infrastructure Maintenance Manager or Designated Staff of the said ‘Company’ defined at 1.a of these Special Requirements or its’ Authorised Representatives and/or Agents.
- c.) ‘Apparatus’ means all surface or sub-surface equipment and plant including any associated cabling and/or ducting owned, leased or rented by the said ‘Company’ defined at 1.a of these Special Requirements.

- 2.) Before commencing any work or moving heavy plant or equipment over any portion of the site, the contractor shall confirm details of the Apparatus within the site with the Company’s Representative, who can be contacted at the following offices:

| ADDRESS                                                                                                    | TELEPHONE NUMBER | FAX NUMBER   |
|------------------------------------------------------------------------------------------------------------|------------------|--------------|
| [REDACTED]                                                                                                 | [REDACTED]       | 01234 759145 |
| [REDACTED]                                                                                                 | [REDACTED]       |              |
| Infrastructure Maintenance<br>Team<br>Trafficmaster Ltd<br>University Way<br>Cranfield<br>Beds<br>MK43 0TR |                  |              |

- 3.) Where such details show that the works or the movement of plant or equipment may endanger any Apparatus the Contractor shall give the Company’s Representative at least two months written notice, detailing how the works will affect apparatus, of the date on which it is intended to commence such works or the movement of plant or equipment in order that the presence of any sub-surface Apparatus, particularly surface running cabling, is adequately protected from damage and such protective measures shall be to the satisfaction of the Company’s Representative.

- 4.) In the event of a Company marker being disturbed for any reason it shall not be replaced other than in the exact position and to its former depth unless the repositioning is carried out at the direction and under the supervision of the Company's Representative.

- 
- 5.) The Contractor shall take particular care in relation to the protection of the Apparatus, where such Apparatus includes the presence of cameras and equipment boxes. The Contractor should particularly note that damage to such Apparatus is extremely disruptive to the Company network and costly to reinstate. The Contractor shall make every effort to avoid the disturbance of Apparatus more than is absolutely necessary for the completion of the works in accordance with the contract.
  - 6.) In the event that the planned works will result in a need for Apparatus to be removed, the Contractor must provide the Company with at least one month's notice in order to prepare the Apparatus for removal by the Company's Representative. In each case details of the planned works, including time scales, must be submitted to the Company in order to minimise disruption of the Company network.
  - 7.) When excavating, moving or backfilling around Apparatus, the Company's Representative shall be given adequate written notice, which shall not be less than one week, of the Contractor's intentions in order that he may supervise the works. The Contractor should note that the normal depth of cover for Apparatus and ducts is as follows:
    - a.) In carriageways 600 mm, which is to be maintained.
    - b.) In footways 450mm, which is to be maintained.

Where the 600/450 mm depth of cover cannot be maintained the Contractor shall carry out the instructions of the Company's Representative' for the protection of Apparatus and such actions that follow from the Company's Representative's instruction shall be supervised by the Company's Representative. Where the required depth of cover cannot be maintained over cabling, such cables as are affected shall be enclosed and protected in UPVC ducts to be supplied by the Company as directed by the Company's representative.

With regard to excavation in the vicinity of any Apparatus and ducts the Contractor shall have particular regard to the possibility of reduced cover and the encountering of Apparatus and ducts of cover less than that given at a.) and b.) above.

- 8.) All excavation adjacent to Apparatus shall be carried out by hand until the exact extent and/or location of Apparatus is known. Mechanical borers and/or excavators shall not be used within 1.0 metres of Apparatus without the supervisory presence of the Company's Representative. To prevent any movement of Apparatus during excavation, complete shuttering shall be used as directed by the Company's Representative if:
  - a.) Excavation is deeper than the depth of cover of adjacent Apparatus.
  - b.) Excavation is within 1.0 metres of Apparatus in stable soil.
  - c.) Excavation is within 5.0 metres of Apparatus in unstable soil.

If the after the completion of the works the Contractor intends to use any of the following:

- i.) Pile driving equipment within 10.0 metres of Apparatus.
- ii.) Explosives within 20.0 metres of Apparatus.
- iii.) Laser equipment within 10.0 metres of Apparatus.

the Contractor shall advise the Company's Representative, giving at least two weeks' notice, in order that any special protective measures for the Apparatus affected may be arranged.

- 9.) The covers to Company Apparatus shall only be opened by means of appropriate keys obtained from the Company's Representative and under the direct supervision of the Company's Representative. No employee of the Contractor or any sub-contractor employed by the Contractor shall enter any Apparatus of the Company unless under the supervision of the Company's Representative. The Company's Representative shall be given reasonable access to all Apparatus and Chambers when required.
- 10.) In the event of any damage whatsoever to the Apparatus, the Contractor shall immediately inform the Company, the Contracting Authority and (if required) the Emergency Services.
- 11.) Compliance with the above requirements shall not relieve the Contractor of any of his obligations under the contract.

## **1 Community Relationships and Public Liaison**

### **1.1 Communications Protocols**

1.1.1 The Company's requirements to consult and comply with organisations and consultees during the Design, construction and completion of the New Works shall not be confused with the general communication requirements.

1.1.2 The delivery of all communications relating to the New Works shall be led by the Contracting Authority. The Company shall provide necessary support, as outlined in this Part 8 to the Contracting Authority in the implementation of all project communications from the Effective Date until the Full Services Commencement Date or the Termination Date as the case may be.

1.1.3 To enable the effective management and delivery of communications with external parties including but not limited to:

- (a) stakeholders;
- (b) communities; and
- (c) media.

the Company shall comply with the Contracting Authority's communications protocols and shall attend regular project communications meetings as defined in Section 1.5.

1.1.4 The Contracting Authority's communications protocols shall be developed in consultation with the Company immediately following the Effective Date. These communications protocols shall set out the clear roles, responsibilities and actions applicable to the Contracting Authority and the Company.

1.1.5 Upon the Effective Date and in the absence of the Contracting Authority's formalised communications protocols, the Company shall as a minimum provide the following:

- (a) a Community Liaison Officer as defined in Section 1.2;
- (b) a Community Liaison Team as defined in Section 1.3;
- (c) a fully implementable enquiries and complaints procedure, which can be further developed as part of the Community Liaison and Communication Procedures Plan as detailed in Section 1.4; and
- (d) a dedicated Freephone 24-hour contact 'hotline', as defined in Section 1.10.

### **1.2 Community Liaison Officer**

1.2.1 The Company shall appoint a Community Liaison Officer (CLO), who shall be the primary contact point for the Contracting Authority in relation to the Company's communications and community liaison responsibilities.

1.2.2 The CLO shall be a senior permanent employee within the Company's organisation, with a minimum of ten years' recent and relevant experience of community liaison on major infrastructure construction projects. This role shall be a full time position from the Effective Date until the Full Services Commencement Date or the Termination Date as the case may be. The approval of the Contracting Authority shall be obtained prior to the appointment of the Community Liaison Officer.

1.2.3 The CLO shall be responsible for ensuring that the Contracting Authority is alerted as soon as practicable to any matter, including any direct or indirect communication received,

## Part 8: Liaison Procedures

which may have an impact on the reputation of the New Works, the Company, the Contracting Authority or any of the Funding Partners.

1.2.4 The CLO shall be supported by the Community Liaison Team as defined in Section 1.3.

### **1.3 Community Liaison Team**

1.3.1 The Company shall appoint a Community Liaison Team (CLT), which as a minimum shall comprise four staff in addition to the CLO. The CLT shall be responsible for the efficient and professional handling of enquiries and complaints. The CLT shall also be responsible for the distribution of information to directly affected parties as agreed by the Contracting Authority and in accordance with the Community Liaison and Communications Procedures Plan defined in Section 1.4. Additional staff shall be incorporated into the CLT as may be necessary to fulfil the liaison requirements set out in this Part.

1.3.2 The CLT shall be headed by the CLO and shall have sufficient staff and equipment to carry out its responsibilities to a consistently high standard. This shall include appropriate expertise to support the various communication activities detailed in this Part 8.

1.3.3 Where the CLO is unavailable, the Company shall nominate a member of staff from the CLT to act as authorised deputy. Under such circumstances this member of staff shall fulfil the duties of the CLO and shall be the principal point of contact for the Contracting Authority.

1.3.4 The CLT shall include one or more individuals with specific responsibility for coordinating liaison with affected landowners, including reporting on progress with such liaison and issues arising.

### **1.4 Community Liaison and Communications Procedures Plan**

1.4.1 Within six weeks of the Effective Date, the Company shall submit a Community Liaison and Communications Procedures Plan (CLCP) to the Contracting Authority for approval.

1.4.2 The CLCP shall describe in detail how the Company shall support the Contracting Authority in the successful delivery of all project communications, in accordance with the Contracting Authority's requirements, and shall include, but not be limited to, the following information:

- (a) the Company's community liaison policy;
- (b) the Company's nominated community liaison personnel (including CLO and CLT);
- (c) a protocol governing all aspects of communications within the Company's organisation (including any and all consortium members and sub Companies) that adheres to the Contracting Authority's protocols defined in Section 1.1.4;
- (d) the Company's methodology for processing, recording and resolving observations, queries, enquiries and complaints from stakeholders, community groups, media, any other affected parties or the public;
- (e) a protocol for referring enquiries or complaints to the Contracting Authority in the event that the Company fails to resolve them to the satisfaction of the original enquirer or complainant;
- (f) plans for keeping owners / occupiers of nearby properties, businesses, community councils and other relevant parties who may be affected by construction of the New Works informed of potential disruption / mitigation

## Part 8: Liaison Procedures

including, but not limited to, traffic management and all construction of the New Works likely to have a noise, vibration or other impact on those parties;

- (g) Site contingency communication plans which provide procedures for dealing with emergency situations and other unforeseen events relating to the New Works, which may cause adverse publicity;
- (h) plans for supporting the communication of relevant general information on construction operations which may be of public interest; and
- (i) a Contact and Education Space management plan as defined in Section 1.9.

1.4.3 The Company shall ensure that all staff within its organisation, as well as any staff in sub-contracted organisations, adhere to the CLCP and that the CLO is notified of all enquiries, complaints or queries received.

## 1.5 AWPR/B-T Communications Group

1.5.1 The AWPR/B-T Communications Group shall be established by the Contracting Authority to manage all communications for the project. During the Design, execution and completion of the New Works, the AWPR/B-T Communications Group shall comprise:

- (a) the Contracting Authority and authorised Representatives; and
- (b) the CLO

1.5.2 Communications meetings shall be held monthly, unless otherwise directed by the Contracting Authority. The meeting shall be chaired by the Contracting Authority or his nominated representative and the CLO (or his authorised deputy) shall be in attendance.

1.5.3 A minimum of 48 hours in advance of any AWPR/B-T Communications Group meeting, the CLO shall submit in electronic format (Microsoft Word or compatible) the following information containing sufficient detail and notice, to allow quarterly forward planning of proactive and reactive communications activities:

- (a) milestones for the full construction programme (updated as appropriate);
- (b) a three month forward projection of anticipated sustained traffic management proposals;
- (c) a three month forward projection of any construction New Works or any construction related activities that are likely to cause disruption to the public; and
- (d) a monthly summary report of enquiries, correspondence, complaints and responses as detailed in the contacts log, particularly identifying any significant trends or issues that require further discussion and handling.

1.5.4 In order to allow immediate consideration and potential discussion at the next AWPR/B-T Communications Group meeting, the Company shall notify the AWPR/B-T Communications Group, as soon as practicable, of any Stakeholder, community group or media issues which:

- (a) are likely to be controversial;
- (b) are likely to attract national or regional interest;
- (c) are likely to affect any local community;
- (d) relate to trade press interest;
- (e) relate to public or private conferences and presentations; and/or
- (f) request or require a meeting or briefing.

## Part 8: Liaison Procedures

**1.6 General Communication Requirements****Public Statements and the like**

- 1.6.1 The Company shall not make any public statements, public announcements, speeches or presentations in relation to the New Works in whole, or in part, without prior written approval from the Contracting Authority. This includes, but is not limited to, participation at professional conferences and seminars as well as any statements to the media.

**Contact Persons Database**

- 1.6.2 The Contracting Authority shall retain and update a Contact Persons Database, which shall list contact details for any individual, household, group, business or the like, affected by the New Works. The Company shall provide a weekly report of new / updated contact information to the Contracting Authority to facilitate updates of the Contact Persons Database.
- 1.6.3 In accordance with 1.4.2(f), the Company shall be responsible for notifying owners / occupiers of nearby properties, businesses, community councils and other relevant parties regarding construction New Works that may affect them, a minimum of 14 days prior to work commencing on Site. The Contracting Authority shall approve the distribution list for mail drops based on the Contact Persons Database unless otherwise agreed in writing by the Contracting Authority. The distribution of all media by the Company shall be in accordance with Data Protection Laws.
- 1.6.4 All correspondence with owners / occupiers of nearby properties, businesses, community councils and other relevant parties who may be affected by construction New Works, shall be prepared by the Company and submitted to the Contracting Authority for agreement and approval, a minimum of 14 days prior to the intended date of issue.
- 1.6.5 The content and placement of any advertisement relating to the New Works shall be prepared by the Company and submitted to the Contracting Authority for agreement and approval, a minimum of 14 days prior to the intended date of publication.
- 1.6.6 In exceptional circumstances, where the 14 day timescale cannot be met, the Company shall ensure that the Contracting Authority is notified as soon as practicable. However, under no circumstances shall the Company issue correspondence or place an advertisement without prior approval from the Contracting Authority.
- 1.6.7 The CLO shall provide a comprehensive monthly construction progress update, written in plain English and supported with copy photographs and / or relevant information, to form the basis for project website updates, quarterly newsletters and monthly updates.
- 1.6.8 Project website updates, quarterly newsletters and monthly updates issued by the Contracting Authority shall distinguish between activities undertaken by the Company and those undertaken by associated parties in relation to the New Works.
- 1.6.9 The Company shall ensure that the information points, which have been established by the Contracting Authority and listed on the project website, are given relevant newsletters, flyers and the like throughout the duration of the project.

**Project Website**

- 1.6.10 The Company shall support the enhancement of the Contracting Authority's project website during Design, construction and completion of the New Works, to facilitate community liaison and communicate relevant New Works information. This shall include, but is not limited to, the use of multimedia and social media engagement tools as

---

**Part 8: Liaison Procedures**

---

appropriate. The Company shall also be expected to support any future advances in website related communications, which become available to the Contracting Authority during the contract period.

1.6.11 The Company shall not commission, host or maintain any website or other online communications channel relating to the project.

1.6.12 All photography, videos, webcams and the like shall be provided in accordance with Appendix 1/22 to the Specification.

**Quarterly Newsletter**

1.6.13 The Company shall procure and produce a quarterly newsletter. The quarterly newsletter content shall be provided to the Contracting Authority by the Company.

1.6.14 The Contracting Authority shall approve the final newsletter content and layout for issue. The anticipated layout shall be:

- (a) A4 size;
- (b) a minimum of 4 pages in length;
- (c) full colour print to a good quality standard; and
- (d) provided in PDF format for inclusion on the website.

1.6.15 The Company shall procure the printing of the quarterly newsletters. A minimum of 5,000 copies shall be printed each quarter and at the Contracting Authority's instruction. In exceptional circumstances, additional copies shall be printed in quarters where specific events or New Works are planned (maximum 10,000 copies in total).

1.6.16 The Company shall procure the distribution of the quarterly newsletters to identified contacts on the Contact Persons Database and to local libraries. The Company shall distribute the newsletter in electronic PDF format where requested. 1,000 copies of the quarterly newsletter shall be allocated to the Contracting Authority.

**Monthly Project Updates**

1.6.17 The Contracting Authority shall produce and issue regular electronic project updates (eZine) on a monthly basis or more frequently if necessary. The eZine content shall be provided by the Company.

1.6.18 The Contracting Authority shall compile the eZine and finalise the content and layout for issue.

1.6.19 The Contracting Authority shall procure the distribution of the electronic project update to specific email addresses identified on the Contact Persons Database and individuals signed up to the project website as necessary.

**Flyers**

1.6.20 The Company shall procure special flyers in advance of upcoming construction events which have a significant impact on the general public as identified by the Company, the Contracting Authority or the AWPR/B-T Communications Group.

1.6.21 The flyer content and layout shall be prepared by the Company and submitted to the Contracting Authority for agreement and approval, a minimum of 14 days prior to the intended date of printing.

Part 8: Liaison Procedures

---

- 1.6.22 The Company shall procure the printing and distribution of the flyers. Prior to printing, the Company shall agree the quantity of flyers to be produced with the Contracting Authority.

**Material Branding**

- 1.6.23 All communications materials, including New Works Site signage, shall be produced in accordance with the corporate guidelines provided by the Contracting Authority and in accordance Appendix 1/21 to the Specification.
- 1.6.24 Project website updates, quarterly newsletters and monthly updates issued by the Contracting Authority, shall carry Contracting Authority approved corporate branding and include a Company logo as agreed by the Contracting Authority.
- 1.6.25 Any New Works related or Contracting Authority corporate branding produced by the Company shall be submitted to the Contracting Authority for agreement and approval in advance of public use to ensure consistency with the Contracting Authority's corporate branding guidelines.

**1.7 Meetings, Site Visits and Events**

- 1.7.1 The Company shall assist the Contracting Authority with the preparation of a draft invitation / notification list for any meetings and events, which shall be issued at the Contracting Authority's instruction, a minimum of 14 days prior to the proposed meeting date.
- 1.7.2 The CLO shall chair all attended meetings and briefings with community groups, affected parties and the like, unless otherwise agreed with the Contracting Authority. In addition, the Company shall be required to support, chair and input into meetings with stakeholders or the media where required by the Contracting Authority.
- 1.7.3 The Company shall supply to the Contracting Authority for agreement formal minutes of all discussions and actions arising from attended meetings or briefings, within 48 hours of the relevant meeting. The Company shall issue a copy of the agreed minutes to the AWPR/B-T Communications Group for review at their next meeting.
- 1.7.4 The Company shall facilitate all meetings within the Contact and Education Space defined in Section 1.1.9 unless otherwise agreed with the Contracting Authority. The Company shall be responsible for arranging the venue and providing presentation equipment as necessary.
- 1.7.5 At the request of the Contracting Authority, the Company shall facilitate New Works Site visits for Ministers, elected members and other dignitaries, stakeholders, community groups, media representatives, industry representatives and the like. The Company shall provide and maintain all necessary safety clothing and equipment. All visitor safety clothing shall be badged 'Visitor' on the back.

**1.8 Contacts Log**

- 1.8.1 The Company shall record all communications, correspondence, enquiries, complaints, and responses with any stakeholders, community groups, media, affected parties and the like, within a contacts log, which shall be maintained throughout the Design, construction and completion of the New Works.
- 1.8.2 The contacts log shall be maintained in electronic format (Microsoft Excel or other compatible software) and for all communications, correspondence, enquiries, complaints and responses, shall include as a minimum:

Part 8: Liaison Procedures

---

- (a) date received / responded;
- (b) geographic area from where the communications, correspondence, enquiries or complaints originated;
- (c) nature of enquiry / complaint / response;
- (d) name of employee who received the communication;
- (e) name of employee dealing with response; and
- (f) current status.

1.8.3 The Company shall update the log as necessary to include:

- (a) the measures taken to investigate, deal with or address communications, correspondence, enquiries or complaints; and
- (b) the timescale taken to respond to or address communications, correspondence, enquiries or complaints.

1.8.4 Complaints shall be accurately noted in the contacts log as received and the Company shall advise the Contracting Authority as soon as practicable of all key communications received. The contacts log shall form the basis of the summary for the monthly report at the AWPR/B-T Communications Group meetings.

1.8.5 The Company shall ensure that the contacts log is prepared in a manner that enables information regarding complaints as follows to be categorised for separate discussion with the Local Authority or Traffic Management Group as appropriate

- (a) noise and vibration;
- (b) dust or air pollution; and/or
- (c) traffic management.

1.8.6 Notwithstanding the requirements of Section 1.5.3, the Company shall provide to the Contracting Authority on a monthly basis detailed and summary information from the contacts log for its use by the Contracting Authority as appropriate.

## **1.9 Contact and Education Space**

1.9.1 The Contracting Authority will provide a Contact and Education Space for the Project which will be located within the Company's main New Works Site office. The Contact and Education Space will be commissioned and available for occupation by 01 April 2015 at the latest.

1.9.2 The Company responsibilities in relation to this facility, in addition to those listed in the Schedule 2 Part 4, and its operation shall include, but not be limited to, the following provisions:

- (a) appropriate furniture
- (b) appropriate staff, including Contact Liaison Officers;
- (c) a live link, via a secure telecommunications system, to project web cams located in proximity to the Site (refer to Appendix 1/22 to the Specification);
- (d) operation and maintenance of the building to current health and safety regulations, including the provision and replacement of all necessary signage and leaflets;
- (e) first aid kits;

## Part 8: Liaison Procedures

- 
- (f) procurement of secure high speed broadband wifi telecommunication supplies suitable for use by visitors and staff;
- 1.9.3 The Company shall operate, the Contact and Education Space from 01 April 2015 until 12 weeks after the Full Services Commencement Date or until the Termination Date.
- 1.9.4 Prior to the Contact and Education Space becoming available for use, and within four weeks of the Effective Date, the Company shall facilitate a temporary space within the Company's temporary New Works Site offices.
- 1.9.5 The Contact and Education Space shall be open to the general public between the hours of 0900 and 1730 Monday to Friday, and 1000 and 1600 Saturday.
- 1.9.6 On occasion and at the request of the Contracting Authority, the Company shall be required to operate and staff the Contact and Education Space out with the opening hours defined in Section 1.9.5 to accommodate particular evening or weekend events, including community meetings and the like.
- 1.9.7 The Contact and Education Centre shall act as an information and access point for the Aberdeen Western Peripheral Route/Balmedie – Tippetry project.
- 1.9.8 The Contact and Education Space shall be staffed by a minimum of one representative from the Company (from the CLT) representative at all times. The Company shall ensure 'hot desk' facilities are provided within the Contact and Education Space for the Contracting Authority and / or its Representatives and there shall be sufficient CLT staff to provide adequate coverage for the opening hours defined in Section 1.9.5.
- 1.9.9 A CLO and CLT shall be responsible for liaising with the Contracting Authority in relation to the arranging and booking of visits, the arranging of suitable catering for each visit, updating wall displays and other presentation materials and undertaking presentations on the progress of the New Works. The Company or Contracting Authority shall assist with specific technical presentations as agreed from time to time. The Contact and Education Space shall cater for drop in visitors in addition to the organised sessions arranged for interest groups.
- 1.9.10 The CLO staff based at the Contact and Education Space shall coordinate effectively to ensure efficient and successful responses to any enquiries or complaints.
- 1.9.11 The Contact and Education Space shall share its reception with the Company's main New Works Site office and shall be staffed by the Company's reception staff. This staff member shall act as a first point of contact for any visitors to the Space and shall direct them to the appropriate CLO for the specific query or complaint. The Company's CLT shall support the Contracting Authority's staff member during busy periods.
- 1.9.12 In the event that that there is an enquiry or complaint related to New Works and the relevant CLO is mobilised on the New Works Site, the Company's reception staff member shall contact the relevant CLO by telephone.
- 1.9.13 The Company shall develop high quality information materials for the Contact and Education Space describing the New Works and giving relevant information on the project in plain and accessible English. The materials for the Contact and Education Space shall be agreed and approved by the Contracting Authority and maintained and updated by the Company to reflect progress on the New Works throughout the project lifetime. These materials shall include, but are not limited to:
- (a) information panels to accommodate provision for a minimum of 30 A0 boards;
-

## Part 8: Liaison Procedures

- (b) video overview(s) of the project with relevant updates during the period of the New Works, with appropriate hardware (DVD or PC) to play the video overview(s);
- (c) a high performance laptop computer capable of operating the Virtual Reality Model as described in 1.13;
- (d) a live link to web cams / timelapse cameras installed on the New Works Site in accordance with Appendix 1/22; and
- (e) a sufficient stock of literature for visitors to take away, such as leaflets and newsletters.

1.9.14 The Company shall maintain and operate the permanent Contact and Education Space such that it complies with all relevant legislation including the *Construction (Health, Safety and Welfare) Regulations 1996*, the *Electricity at Work Regulations 1989*, the *Disability Discrimination Act 2005*, and the *Equality Act 2010*.

### **1.10 Freephone 24-hour contact 'hotline'**

1.10.1 The Company shall establish a dedicated Freephone 24-hour telephone contact 'hotline' in addition to an email address, fax number and postal address to deal with queries or complaints from the general public. These contact details shall be exhibited on all New Works Site notices or information boards, correspondence, newsletters, flyers and the like.

1.10.2 The Company shall establish operating and management procedures for the 24-hour 'hotline' within the CLCP.

1.10.3 The 24-hour 'hotline' shall be manned by the Company at all times. Outwith normal working hours as defined in Section 1.9.5 the 'hotline' shall be staffed by a dedicated on-call contact person from the CLT. During exceptional circumstances and in agreement with the Contracting Authority, the 'hotline' can, as a minimum, be provided by means of a high quality call centre service that is accredited by a recognised customer call-centre industry body.

1.10.4 All issues, queries or complaints received via the 24-hour 'hotline' shall be logged in the contacts log and shall be dealt with in accordance with the communications protocols defined in Section 1.1. As a minimum, the Company shall ensure that all calls are responded to within 24 hours giving a holding response if necessary, with all responses logged in the contacts log.

1.10.5 In general, responses to complaints or queries shall be prepared by the Company, approved by the Contracting Authority and issued by the Company unless otherwise instructed. However, where a recurring complaint or query arises and a previous response has been approved by the Contracting Authority and issued by the Company, the CLT shall issue a response without referral to the Contracting Authority.

1.10.6 The Company shall be responsible for resolving complaints or queries related only to its area of responsibility. Issues, queries or complaints received via the 24-hour 'hotline' that are not related to the Company shall be:

- (a) detailed in the contacts log;
- (b) re-routed to the relevant person within the Contracting Authority as soon as practicable.
- (c) re-routed to the Contracting Authority immediately if the enquiry is from a representative of the media.

## 1.11 Stakeholder and Media Communications

1.11.1 The Contracting Authority shall be responsible for all stakeholder communications on all aspects of the New Works including, but not limited to:

- (a) political (MPs, MSPs, MEPs, Ministers, local councillors, council officials);
- (b) operational stakeholders (utilities, emergency services, etc);
- (c) statutory bodies (including community councils);
- (d) environmental groups; and
- (e) industry stakeholders.

unless otherwise specified in Section 1.11.5, and a detailed list of the stakeholder contacts within each category shall be included as part of the communication protocols defined in Section 1.1.1.

1.11.2 The Contracting Authority shall be responsible for all community, local, regional, national and international media communications on all aspects of the New Works including, but not limited to:

- (a) print (newspapers);
- (b) broadcast (TV and radio);
- (c) technical (trade media including journals); and
- (d) online (online versions of above media, blogs, social media).

1.11.3 The Company shall ensure that the Contracting Authority is notified immediately of any media enquiry and the protocols for referral of media interest and publicity procedures shall be included as part of the communication protocols defined in Section 1.1.

1.11.4 The Contracting Authority shall be responsible for the co-ordination of all responses to stakeholders, media and the like unless otherwise specified in Section 1.11.5, and at the request of the Contracting Authority, the Company shall provide assistance with responses where necessary.

1.11.5 The Company shall be permitted by the Contracting Authority to communicate directly with a stakeholder (e.g. agreed local authority officials) where delegated authority is written into the communication protocols defined in Section 1.1. In this instance, the Contracting Authority must agree and approve any communication or response prior to issue by the Company.

1.11.6 The Contracting Authority shall authorise and undertake any meetings or briefings with stakeholders, media and the like. At the request of the Contracting Authority, the CLO and / or other senior specialist personnel shall be made available by the Company to attend such meetings or briefings and provide expert assistance.

## 1.12 Community Communications

1.12.1 The Company shall be responsible for all community communications relating to all aspects of the New Works, in accordance with Section 1.1 of this Part 8 including, but not limited to:

- (a) local (affected) residents;
- (b) residents associations;
- (c) community groups and associations (unless otherwise defined in Section 1.1.3);

Part 8: Liaison Procedures

---

- (d) recreational user groups;
- (e) local (affected) businesses; and
- (f) wider community including non-local commuters and businesses using the existing road network in the vicinity of the New Works.

A detailed list of the community contacts within each category shall be included as part of the communication protocols defined in Section 1.1.3.

- 1.12.2 The Company shall be responsible for communicating directly with a community group unless otherwise specified in the communications protocols defined in Section 1.1. In this instance and at the request of the Contracting Authority, the Company shall provide assistance with responses where necessary.
- 1.12.3 The Contracting Authority shall authorise and undertake any meetings or briefings with statutory community groups, including community forums and other pre-defined / agreed groups unless the Contracting Authority delegates authority to the Company to undertake these on its behalf. At the request of the Contracting Authority, the CLO and / or other senior specialist personnel shall be made available by the Company to attend such meetings or briefings and provide expert assistance.

### **1.13 Virtual Reality Model**

- 1.13.1 The Contracting Authority has produced Virtual Reality Models (VRM) based on the Stage 3 Designs defined within the Aberdeen Western Peripheral Route and Balmedie – Tippetty Environmental Statements.
- 1.13.2 The Company shall procure a licence which shall permit the Company to run the existing VRM on a suitable PC with a 42" LED monitor within the Contact and Education Space.
