

Appendix A7.4: Air Quality Receptor Results

1 Introduction

- 1.1 A total of 76 human receptors were modelled to predict local air quality assessment concentrations, with the results of the modelling provided in Table 1. The highest predicted concentration (NO₂ 'Do Something' concentration) are reported in Chapter 7 (Air Quality). It should be noted that receptor numbers do not run sequentially in the table; the receptor baseline has been updated as the proposed scheme has been developed and the corresponding study area has been updated.
- 1.2 There are no ecological sites sensitive to nitrogen and within 200m of the affected road network. No further reference is made to an ecological assessment.

Table 1: Modelled Air Quality Receptor Results for NO₂, PM₁₀ and PM_{2.5}
