# **Key Reported Road Casualties Scotland 2019**

This bulletin presents *provisional* statistics of reported injury road accidents (i.e. road accidents reported to the police in which one or more people were killed or injured) in Scotland in 2019. Final figures will be published in October 2020.

This year, Police Scotland has started to use a new accident recording system. The introduction of this new system has changed the way casualty severity is recorded and as a result comparisons of the number of serious and slight casualties to earlier years should be made with caution. This bulletin includes adjusted figures, produced by the Department for Transport, that allow users to make comparisons to previous years. Other breakdowns, such as severity by mode of transport and type of road are presented on the basis of the unadjusted figures as reported by Police Scotland.

#### 1. Main Points

- 1.1 There was a total of **7,594** road casualties reported in 2019 this is 830 or 10% fewer than 2018 and the lowest number of casualties since annual records began in 1950. Of which there were:
  - **168 fatalities**: 7 (or 4%) more than 2018
  - 2,001 seriously injured
  - 5,425 slightly injured [Table 2].
- 1.2 By mode, in 2019 there were:
  - 4,557 **car** user casualties (528, 10% less than 2018); including 78 fatalities (3 more than 2018)
  - 1,243 pedestrian casualties (13, 1% less than 2018); including 46 fatalities (12 more than 2018)
  - 519 **motorcycle** casualties (121, 19% less than 2018); including 25 fatalities (8 less than 2018)
  - 564 pedal cycle casualties (74, 12% less than 2018); including 8 fatalities (2 more than 2018)
  - 195 bus and coach user casualties (35, 15% less than 2018) [Table 3].

These figures take no account of changes in modal choice so changes could be because more or fewer people are travelling by a particular mode.

- 1.3 In 2019 there were 759 **child** casualties reported, 5 (1%) more than in 2018. This included **2** fatalities, 1 fewer than last year **[Table 4]**. Conclusions on trend cannot be made from a single year's data as the numbers are small and fluctuate from year to year. Trends using a three year average are included in table 7.
- 1.4 In 2019 there were 110 **male** fatalities, the same as 2018. **Female** fatalities rose by 7 (14%) to 58. Thirteen per cent (986) of all casualties were aged 16–22, a fall of 10% on 2018, of which 555 were male and 430 were female. Casualties aged under 5 rose by 1, from 125 to 126 between 2018 and 2019 **[Table 12]**.
- 1.5 Scotland's road safety framework to 2020 contains 5 **national targets for casualty reductions by 2020**. Currently available data allows us to measure progress against 3 targets; progress against all targets will be published in October 2020. Scotland's performance is currently on track to meet 2 of those 3 targets, although in each case there has been a significant improvement since the 2004-2008 baseline.
  - 168 people were killed in 2019, a reduction of 42% since the baseline (performance currently exceeding the 2020 target of a 40% reduction) [Table 5]
  - 2,001 people were seriously injured in 2019 [Table 6] Due to the changes in the recording of casualty severities, progress against this target is measured on the basis of adjusted figures, which show a reduction of 33% from the baseline (performance not currently on track to meet the 2020 target of a 55% reduction) [Table 2b].
  - On average, there were 2 children killed each year between 2017 and 2019: a reduction of 85% since the baseline (performance currently exceeding the 2020 target of a 50% reduction) [Table 7]

## 2. Background

- 2.1 This bulletin presents *provisional* statistics of reported injury road accidents (i.e. road accidents in which one or more people were killed or injured) in Scotland in 2019. These figures were extracted from Transport Scotland's reported road accident statistical database (based on 'Stats19' statistical returns made by Police Scotland) on 3 July 2020. Final 2019 figures will appear in *Reported Road Casualties Scotland 2019*, which will be published in October 2020 and may differ slightly due to late returns and amendments. For similar reasons, the figures given here for 2018 and earlier years may differ slightly from those published previously. Further information about the differences between the main figures in the publications can be found in section 11.2.
- 2.2 The statistics are the numbers of injury road accidents which were **reported by the police**. Each accident is classified according to the severity of its most seriously injured casualty. Very few, if any, fatal accidents do not become known to the police. However, there could be many non-fatal injury accidents which are *not* reported by the public to the police, and are therefore *not* counted in these statistics because the police can only report accidents of which they are aware. An article on under-counting in the statistics is included in Reported Road Casualties Scotland 2010
- 2.3 The <u>Scottish Road Safety Framework</u> published on 15 June 2009, outlined Scotland specific road safety targets. The **casualty reduction targets** for 2020 are described in section 11.5. Progress towards them is covered in section 8, figures 4 to 7 and tables 5 to 9.
- 2.4 From around June/July 2019 Police Scotland has been using a new accident and casualty data recording system called CRaSH (Collision Reporting and Sharing). Before the introduction of CRaSH, police officers would use their own judgement, based on official guidance, to determine the severity of the casualty (either 'slight' or 'serious'). CRaSH is an injury-based recording system where the officer records the most severe injury for the casualty. The system then automatically converts the injuries to a severity level from 'slight' to 'serious'. Section 11.3 provides further detail on how injuries are classified.

Since CRaSH removes the uncertainty that arises from officers having to assess the severity of casualties based on their own judgement, severity information collected in this way is expected to be more accurate and consistent. However, the move to an injury-based reporting system tends to result in more casualties being classified as 'serious' and therefore causes a discontinuity in the time series. The Department for Transport has carried out analysis to show what historical figures would have looked like if CRaSH had been used previously. These figures have been presented in sections 3 and 4.

- 2.5 Key Reported Road Casualties Scotland 2019 is one of a series of Transport Statistics publications. A comprehensive statistical picture of transport activity is given in the compendium Scottish Transport Statistics volume and the latest transport and travel trends from Scotlish Household Survey transport data published in Transport and Travel in Scotland. Key Reported Road Casualties Scotland 2019 is followed in October by Reported Road Casualties Scotland, a volume which includes extensive analyses of the numbers of accidents, vehicles and casualties. See Transport Scotland statistical publications for more details:

# 2019 Road Accidents and Casualties - Infographic summary

There were 7,594 recorded road accident casualties in Scotland in 2019

This is a reduction of 10% compared to the previous year, and a 43% reduction compared to 2010.

The number of people killed in 2019 increased by 4% compared to 2018, from 161 to 168.

Since 2010, the number of people killed in road accidents has decreased by 19%.

Car was the mode of transport with the highest number of fatalities, followed by pedestrians.

Total reported casualties decreased across major modes of transport.
Motorcycle casualties saw the highest decrease, pedestrian casualties saw the lowest decrease.

## 3. Reported numbers of Accidents (Tables 1a and 1b)

- 3.1 Table 1a shows the downward trend of injury road **accidents** recorded by the police. In 2019, there were 5,686 accidents in which someone was killed or injured, 12 per cent fewer than in 2018 and the lowest number since records began. There were 161 fatal accidents in 2019, 11 (7%) more than in 2018. In 2019, there were 1,715 serious injury accidents; and 3,810 slight injury accidents. Due to changes in severity reporting the number of reported serious and slight accidents are not comparable to previous years.
- 3.2 As outlined in section 2.4, Police Scotland's move to CRaSH, an injury-based reporting system, has resulted in changes in severity reporting. *Table 1b* provides adjusted figures to show how many slight and serious accidents there would have been in previous years if they had been recorded using an injury-based reporting system. These experimental statistics, produced by the Department for Transport, make it possible to compare the most recent statistics to previous years. On the basis of the adjusted figures, the number of serious accidents in 2019 increased by 9% on 2018, and the number of slight accidents decreased by 19%.

Table 1a: Injury Road Accidents by Severity, 1970 – 2019

<sup>1.</sup> An accident can involve more than one casualty; casualty numbers are presented in table 2.

<sup>2.</sup> Due to changes in the way casualty severities are recorded, serious and slight figures in 2019 are not comparable with previous years.

The unadjusted figures in this table are National Statistics

The adjusted figures in this table are Experimental Statistics

Unadjusted figures in this table may not match those in other tables in this publication as DfT closes its database each year but Transport Scotland keep its database open.

Figures for serious and slight injuries are as reported by police. Since 2019, Police Scotland has adopted a new severity reporting system which means that serious injury figures, and to a lesser extent slight injuries, are not comparable with earlier years. Adjustments to account for the change have been produced.

More information on the change and the adjustment process is available at the following address. <a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\_data/file/833813/annex-update-severity-adjustments-methodology.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\_data/file/833813/annex-update-severity-adjustments-methodology.pdf</a>

## 4. Reported numbers of Casualties (Tables 2a, 2b and 4)

- 4.1 In 2019, 168 people were **killed** in road accidents in Scotland: 7 (4%) more than 2018. Since 1978, there has been a clear, steady, long-term downward trend. More recent years' figures have fluctuated around a less pronounced downward trend [Figure 1].
- 4.2 In 2019 there were 2,001 people **seriously injured** in road accidents. As outlined in section 2.4, this figure cannot be directly compared to the reported figures for previous years. *Table 2b* provides adjusted figures to show how many serious casualties there would have been in previous years if they had been recorded using an injury-based reporting system. These experimental statistics, produced by the Department for Transport, make it possible to compare the most recent statistics to previous years. On the basis of the adjusted figures, the number of people seriously injured in 2019 increased by 12% on 2018. Figure A shows how the adjusted and non-adjusted figures compare since 2004. The long-term trend has generally been downward since the early 1980s **[Figure A]**.
- 4.3 There were 5,425 people reported as **slightly injured** in 2019. Once again, this figure cannot be directly compared to the reported figures for previous years. Table 2b provides adjusted figures to show how many slight casualties there would have been in previous years if they had been recorded using an injury-based reporting system. On the basis of the adjusted figures, the number of people slightly injured in road accidents in 2019 decreased by 16% on 2018. Figure B shows how the adjusted and non-adjusted figures compare since 2004. There has been a clear downward trend in these figures since 1997 [Figure B].
- 4.4 There were a total of 7,594 casualties (of all severities) reported in 2019: 830 (10%) fewer than in 2018 and the lowest number since annual records began in 1950. Between circa 1970 and 1990, the figures fluctuated around a general downward trend, with numbers falling from the short-term peak in 1989 & 1990 (of over 27,000). Since 1998, there has been a consistent reduction every year, with numbers falling below 12,000 in 2013, which was half the level of the early 1990s [Figure 3].

Table 2a: Casualties by Severity, 1950 - 2018

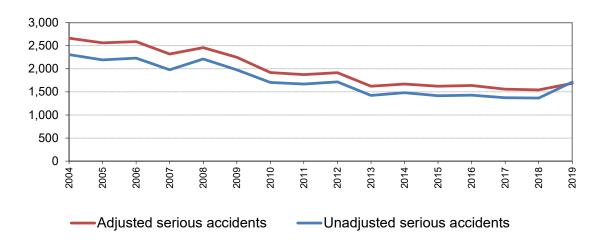

|   | Killed     | Serious<br>injury | Killed and<br>Serious | Slight<br>injury | All<br>Severities |

| 2015 - 2019 average <sup>3</sup>                    | 167        |                   |                       |                  | 9,465             |
| 2019 percentage change <sup>3</sup> :               |            |                   |                       |                  | )                 |
| on 2018 <sup>3</sup>                                | 4%         |                   |                       |                  | -10%              |
| on 04-08 average <sup>3</sup>                       | -42%       |                   |                       |                  | -56%              |

<sup>1.</sup> Although regular records of the numbers of casualties began in 1947, the level of severity was only collected from 1950 and the number of injury road accidents weren't collected until 1970.

<sup>2.</sup> Some figures for 2018 and earlier years may have been revised slightly from those published previously due to late returns, or due to late corrections being made to returns that had been received earlier.

<sup>3.</sup> Due to changes in severity reporting, the number of serious casualties cannot be compared directly to those reported in previous years. These % change figures for serious casualties have therefore been omitted

Source: Department for Transport.

The unadjusted figures in this table are National Statistics

The adjusted figures in this table are Experimental Statistics

Unadjusted figures in this table may not match those in other tables in this publication

as DfT close its database each year but Transport Scotland keep its database open.

Figures for serious and slight injuries are as reported by police. Since 2019, Police Scotland has adopted a new severity reporting system which means that serious injury figures, and to a lesser extent slight injuries,

are not comparable with earlier years. Adjustments to account for the change have been produced.

More information on the change and the adjustment process is available at the following address. <a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\_data/file/833813/annex-update-severity-adjustments-methodology.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\_data/file/833813/annex-update-severity-adjustments-methodology.pdf</a>

Figure 1: Number of casualties killed, 1950 to 2019

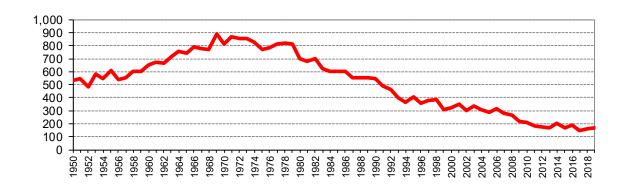

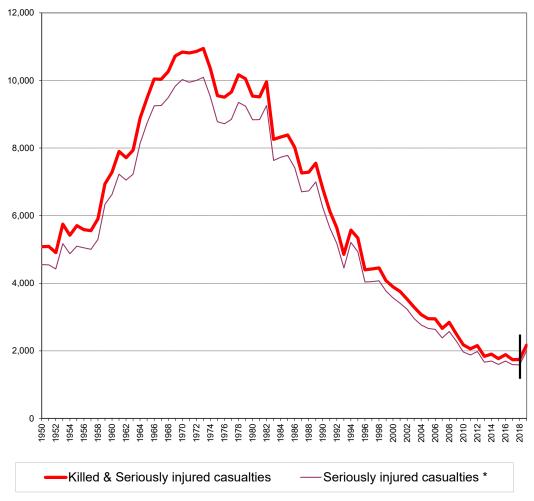

Figure 2: Killed & Seriously injured casualties and Seriously injured casualties, 1950 - 2019

<sup>\*</sup>Due to changes in the way casualty severities are recorded, figures for serious casualties in 2019 are not comparable with previous years.

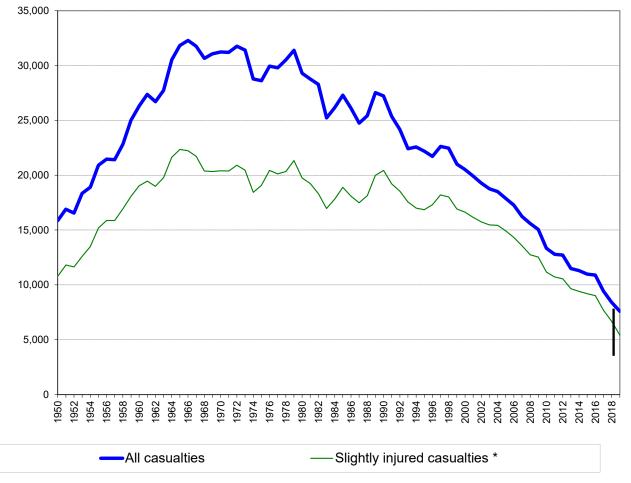

Figure 3: All casualties and Slightly injured casualties, 1950 - 2019

\*Due to changes in the way casualty severities are recorded, figures for slight casualties in 2019 are not comparable with previous years.

# 5. Casualties by Type of Road (Table 3)

- 5.1 In 2019, **non built-up roads** (roads with a speed limit of over 40mph, see paragraph 11.4 for more detail) accounted for two-fifths of the total number of reported casualties (42%: 3,175 out of 7,594). However, they accounted for over two-thirds of those killed (68%: 114 out of 168) and almost half the total number of seriously injured (48%: 953 out of 2001). This will be at least in part due to the higher average speed, as non built-up roads are those with a speed limit greater than 40 mph. These roads also make up two-thirds of Scotland's road network.
- 5.2 Compared with the 2004-08 average, total casualties on non built-up roads and built-up roads have reduced by similar proportions (56% and 55% respectively.) However, the reduction in fatalities on non built-up roads was greater (at 46%) than for non built-up roads (at 34%).

Table 3: Casualties by built-up and non built-up roads, mode of transport and severity, 2017-2019 & 2004-08 average

| Mode of                                  |        | lt-up road |              |        | built-up ro |          |        | All roads |                 |

Figures for 2017 and earlier years may differ slightly to those previously published due to late returns, or corrections to earlier

<sup>\*</sup> indicates that a percentage change is not shown because the denominator is 50 or fewer.

<sup>2</sup> Due to changes in severity reporting, the number of serious casualties cannot be compared directly to those reported in previous years. These % change figures for serious casualties have therefore been omitted.

# 6. Casualties by Mode of Transport (Table 3)

- 6.1 Figures on numbers of casualties by mode should be compared with data on mode use since changes could be due to more or fewer people travelling by a particular mode. Information on mode use is published in the road traffic or personal travel sections of Scottish Transport Statistics (STS). Department for Transport (DfT) traffic estimates¹ showed that car traffic increased by 6% and motorcycle/moped traffic increased by 3% between 2014 and 2018.
- 6.2 As outlined in section 2.4, the number of serious and slight casualties cannot be directly compared to previously recorded figures due to changes in severity reporting. We will have adjusted figures, broken down by mode, available for inclusion in Reported Road Casualties, which is due to be published later in the year.
- 6.3 In 2019 there were 4,557 **car users** reported injured in road accidents; three-fifths of all road casualties (60%: 4,557 out of 7,594) and a 10% fall from 2018. Of these, 78 were killed, an increase of 4% from 2018, and 932 seriously injured.
- 6.4 There were 1,243 **pedestrian** casualties recorded in 2019, a sixth of all casualties (16%: 1,243 out of 7,594) and down by 13 (1%) since 2018. Four per cent of pedestrian casualties were killed (46 out of 1,243) and 39% seriously injured (482 out of 1,243). Ninety-five per cent of pedestrian casualties occurred on built-up roads (1,180 out of 1,243).
- Together, all other modes of transport accounted for almost a quarter (24%) of casualties in 2019 (1,794 out of 7,594) and for a slightly higher proportion of those killed (26%: 44 out of 168) and under a third of those seriously injured (29%: 587 out of 2,001).
- 6.6 Pedal cycle casualty numbers in 2019 decreased by 12% and motorcycle casualties decreased by 19%. In 2019, 519 **motorcycle** casualties were reported, of whom 279 (54%) suffered serious injuries and 25 died, a decrease of 8 fatalities on 2018. There were 564 **pedal cyclist** casualties recorded in 2019, 8 died (two fatalities more than in 2018). There are now more cyclists on the roads, which will likely impact on cycling casualty numbers. There was an increase of 15% in pedal cycle traffic in the last ten years according to traffic estimates provided by DfT<sup>1</sup>.
- 6.6 A total of 195 **bus and coach** users were reported injured (a decrease of 15% on 2018), of whom 23 were seriously injured, three died.

# 7. Child Casualties (Table 4 and Table 7)

- 7.1 There were 759 **child** casualties reported in 2019 representing 10% of all casualties (759 out of 7,594) and an increase of 5 (or 1%) from 2018. Of these, 2 died, 1 less death than in 2018. Both of the children killed in 2019 were pedestrians. The numbers of fatalities are small, so care should be taken when drawing conclusions from year-on-year changes and trends should be looked at over the longer term. The three-year average used to monitor progress against the Road Safety Framework targets shows individual years as fluctuating around the longer-term trend **[Table 7]**.
- 7.2 There were 331 child **pedestrian** casualties recorded in 2019. They accounted for 44% of all pedestrian casualties of all ages (331 out of 759). Of the child pedestrian casualties, 122 were seriously injured (2 died). The number killed was the same as 2018.
- 7.3 In 2019, there were 303 child casualties in **cars**, 7% of all car user casualties (303 out of 4,557). Of the child casualties in cars, 46 were seriously injured (none died). In 2019, there were 68 child **pedal cycle** casualties (12% of the total of 564 pedal cycle casualties of all ages) including 24 who were seriously injured, there were no children killed on pedal cycles in 2019, the same as 2018.

<sup>&</sup>lt;sup>1</sup> DfT published headline 2018 traffic estimates for Scotland on <u>its website</u> and separately provided Transport Scotland with mode breakdowns.

Table 4: Child casualties by built-up and non built-up roads, mode of transport and

severity, 2017-2019 & 2004-08 average

Figures for 2018 and earlier years may differ slightly to those previously published due to late returns, or corrections to earlier

<sup>\*</sup> indicates that a percentage change is not shown because the denominator is 50 or fewer.

Due to changes in severity reporting, the number of serious casualties cannot be compared directly to those reported in previous years. These % change figures for serious casualties have therefore been omitted.

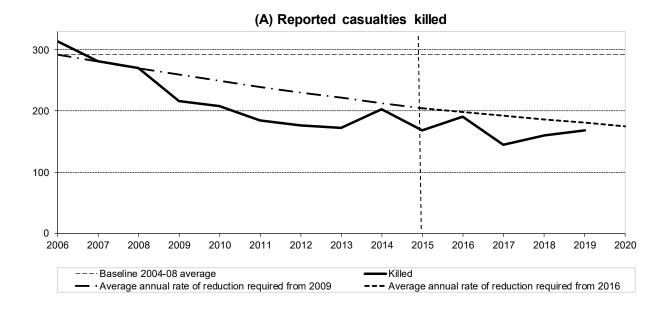

# 8. Progress towards the casualty reduction targets for 2020 (Tables 5-9)

- 8.1 The following section provides information on the progress made towards three of the five casualty reduction targets set out in Scotland's Road Safety Framework to 2020 (see section 11.5 for more information about the Framework).
- 8.1 As outlined in section 2.4, the number of serious and slight casualties cannot be directly compared to previously recorded figures due to changes in severity reporting. Progress against the serious casualty reduction target is therefore based on adjusted figures, produced by the Department for Transport, that show how many slight and serious casualties there would have been in previous years if they had been recorded using an injury-based reporting system. Not all required data is available to assess progress against the slight casualty reduction target and the children seriously injured reduction target; progress against these targets will be updated in Reported Road Casualties.
- 8.2 Progress is assessed towards a milestone in 2015 and the final target by means of an indicative trend based on a constant annual percentage reduction (see section 11.6 for more information). Detailed tables for each of the targets, including a breakdown by mode and historic data, are included in *Tables 5 to 9*.
- 8.3 Scotland is currently on track to meet only 2 of the 5 targets based on data that is available, although in each case there has been a significant improvement since the 2004-2008 baseline.

#### Target: 40% reduction in those killed by 2020

There were 168 people killed in 2019, a **42%** reduction from the 2004-08 baseline average. The decrease seen to 2019 is greater than that required to achieve the 2020 target reduction (40%). *Figure 4* shows that the total number of fatalities in 2019 was below the indicative line required to achieve the target **[Table 5]**.

Figure 4: Progress to casualty reduction target: Casualties killed

#### Target: 55% reduction in those seriously injured by 2020

Due to changes in severity reporting, progress against this target is measured on the basis of adjusted figures provided by the Department for Transport. These figures illustrate how many casualties there would have been in previous years if they had been recorded using an injury-based recording system. On the basis of the adjusted figures, there were 1,965 serious injuries in 2019, a 33% reduction since the adjusted 2004-08 baseline level. The decrease seen to 2019 is less than that required to achieve the framework target for 2020 (a reduction of 55% from 2004-08) [Table 6].

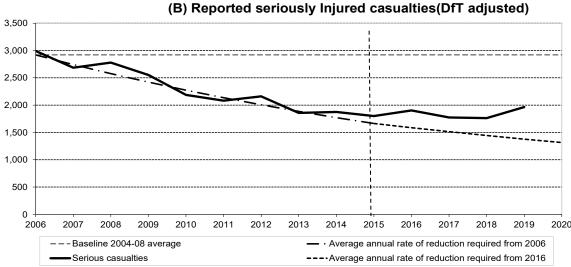

Figure 5: Progress to casualty reduction target: Seriously injured casualties

## Target: 50% reduction in children killed by 2020

8.6 Due to small numbers and year-to-year fluctuations this target is measured using a three-year average. An average of 2 children a year were killed in the 2017-2019 period, an **85%** reduction from the 2004-2008 baseline. The current reduction seen to 2019 is greater than that required to meet the 2020 target **[Table 7]**.

<sup>\*</sup> A percentage change is not shown if the denominator is 50 or fewer.
1. Light goods vehicles and heavy goods vehicles.

Taxis, minibuses and other modes of transport.
 Due to changes in severity reporting, the number of serious casualties cannot be compared directly to those reported in previous years. These % change figures for serious casualties have therefore been omitted.

Table 7: Children killed by mode of transport, 1994 – 2019

<sup>\*</sup> A percentage change is not shown if the denominator is 50 or fewer.

1. Light goods vehicles and heavy goods vehicles.

2. Taxis, minibuses and other modes of transport.

3. Due to changes in severity reporting, the number of serious casualties cannot be compared directly to those reported in previous years. These % change figures for serious casualties have therefore been omitted.

Table 9: Slight casualties by mode of transport, 1994 - 2019

# 9. Accidents and Casualties by Police Force division and Local Authority area (Tables 10 & 11)

9.1 Tables 10 and 11 show the reported numbers of accidents and casualties in each Police Force division and each Local Authority area. These are *provisional* figures, which are subject to a higher degree of revision from late returns and amendments than the overall national figures. In addition, there can be quite large percentage year-to-year fluctuations in the figures for local authority areas within Scotland, particularly for those with the lower numbers. Therefore, the annual average for 2015 -2019 is shown along with 2004-08 average and the figures for the latest year.

<sup>2.</sup> Taxis, minibuses and other modes of transport.

<sup>3.</sup> Due to changes in severity reporting, the number of serious casualties cannot be compared directly to those reported in previous years. These % change figures for serious casualties have therefore been omitted.

Table 10: Accidents by police force division, council and severity, 04-08, 15-19 averages <sup>2</sup> and 2019

<sup>1.</sup> In 2015 the police created a new North East division by combining Aberdeen, Moray and Aberdeenshire councils.

<sup>2.</sup> Due to changes in the way casualty severities are recorded, serious figures in 2019 are not comparable with previous years. Note: Latest year is provisional, see paragraph 9.1

Table 11: Casualties by police force division, council and severity, 04-08, 15-19 averages <sup>2</sup> and 2019

In 2015 the police created a new North East division by combining Aberdeen, Moray and Aberdeenshire councils.
 Due to changes in the way casualty severities are recorded, serious figures in 2019 are not comparable with previous years. Note: Latest year is provisional, see paragraph 9.1

# 10. Casualties by Gender and Age

- 10.1 Table 12 shows the number of reported casualties by gender and age. This table does not account for differences between gender and age groups in the level of exposure to risk; for example, we do not account for the number of people in each group with driving licences.
- 10.2 In 2019 **male** fatalities were the same as in 2018 (110). **Female** fatalities rose by 7, 14% (to 58). Thirteen per cent (986) of all casualties were aged 16–22, a fall of 10% on 2018, of which 555 were male and 430 were female. Casualties aged under 5 rose by 1 from 125 to 126 between 2018 and 2019.

#### 11. Sources and definitions

#### 11.1 The sources of the data

The figures in this bulletin were compiled from the "Stats 19" statistical returns made by Police Scotland. These cover all accidents in which a vehicle is involved that occur on roads (including footways) and result in personal injury, *if* they become known to the police. As noted in section 2.2, there could be many non-fatal injury accidents which are *not* reported by the public to the police, and are therefore *not* counted in these statistics because the police can only include in their returns details of the accidents of which they are aware. More information about this is given in *Reported Road Casualties Scotland 2010*, in the section entitled *Estimating under-counting of Road Casualties in Scotland*. The vehicle(s) involved in the accident need not be moving, and need not be in collision - for example, the returns include accidents involving people alighting from buses. Damage only accidents (i.e. accidents which do not involve personal injury) are not included in these statistics.

#### 11.2 <u>Provisional data</u>

Data used in this publication were extracted from Transport Scotland's reported road accident statistical database in May 2019. The figures published here are marked as provisional, as late returns and amendments will be included in the final figures published in Reported Road Casualties Scotland in October and in figures included in later years' publications.

The differences between the provisional and final numbers are likely to be small. The figures for previous years are included in the table below. Over the last four years, there was a difference of 4 more people killed in 2012 between the June and October publications. The three-year average figure published in Reported Road Casualties Scotland has been 0.2% higher for serious, slight and all severities. Differences may be larger for some subsets of the data, for example the tables by mode, so small changes should be treated with caution.

#### 11.3 The definition of "severity" used in the Road Accident statistics

The classification of the severity of an accident (as "fatal", "serious" or "slight") is determined by the severity of the injury to the most severely injured casualty. The police usually record this information soon after the accident occurs. However, if further information becomes available which would alter the classification (for example, if a person dies within 30 days of the accident, as a result of the injuries sustained in the accident) the police change the initial classification of the severity.

For the purposes of the Road Accidents statistical returns:

- a fatal injury is one which causes death less than 30 days after the accident;
- a fatal accident is an accident in which at least one person is fatally injured;
- a **serious injury** is one which does *not* cause death less than 30 days after the accident, *and* which is in one (or more) of the following categories:
  - (a)an injury for which a person is detained in hospital as an in-patient
  - or (b)any of the following injuries (whether or not the person is detained in hospital):fractures, concussion, internal injuries, crushings, severe cuts and lacerations, severe general shock requiring treatment
  - or (c)any injury causing death 30 or more days after the accident;
- a serious accident is one in which at least one person is seriously injured, but no-one suffers a
  fatal injury;
- a "slight" injury is any injury which is neither "fatal" nor "serious" for example, a sprain, bruise or cut which is not judged to be severe, or slight shock requiring roadside attention;
- a "slight" accident is one in which at least one person suffers "slight" injuries, but no-one is seriously injured, or fatally injured.

From the middle of 2019 Police Scotland started to use the new CRaSH system for recording details of an accident. This provides a more detailed definition of the severity of casualties. The following table lists the options for determining how severe an injury is. The introduction of CRaSH has meant that the severity of injuries is recorded more accurately and has led to an increase in the number of serious injuries. Figures are therefore not directly comparable with those for the previous years.

#### Classification of injury severity using the CRASH reporting system

| Injury in CRASH                              | Detailed severity  | Severity classification |
|--|--------------------|-------------------------|
| Deceased                                     | Killed             | Killed                  |
| Broken neck or back                          | Very Serious       | Serious                 |
| Severe head injury, unconscious              | Very Serious       | Serious                 |
| Severe chest injury, any difficulty breathin | g Very Serious     | Serious                 |
| Internal injuries                            | Very Serious       | Serious                 |
| Multiple severe injuries, unconscious        | Very Serious       | Serious                 |
| Loss of arm or leg (or part)                 | Moderately Serious | Serious                 |
| Fractured pelvis or upper leg                | Moderately Serious | Serious                 |
| Other chest injury (not bruising)            | Moderately Serious | Serious                 |
| Deep penetrating wound                       | Moderately Serious | Serious                 |
| Multiple severe injuries, conscious          | Moderately Serious | Serious                 |
| Fractured lower leg / ankle / foot           | Less Serious       | Serious                 |
| Fractured arm / collarbone / hand            | Less Serious       | Serious                 |
| Deep cuts / lacerations                      | Less Serious       | Serious                 |
| Other head injury                            | Less Serious       | Serious                 |
| Whiplash or neck pain                        | Slight             | Slight                  |
| Shallow cuts / lacerations / abrasions       | Slight             | Slight                  |
| Sprains and strains                          | Slight             | Slight                  |
| Bruising                                     | Slight             | Slight                  |
| Shock  | Slight             | Slight                  |

# **Key Reported Road Casualties Scotland 2019 Transport Scotland**

Over the years, improvements in vehicle design, and the provision and use of additional safety features, together with changes in the law (e.g. on the fitting and wearing of seat belts), will all have helped to reduce the severity of the injuries suffered in some accidents.

Road safety measures should also have reduced the levels of injuries sustained. For example, if traffic calming schemes reduce average speeds, people may suffer only "slight injury" in collisions that previously would have taken place at higher speeds and so might previously have resulted in "serious injury".

However, it is also possible that some of the changes shown in the statistics of "serious injuries" and "slight injuries" may be due to changes in administrative practices, which may have altered the proportion of accidents categorised as "serious". For example, the distinction between "serious" and "slight" injuries could be affected by factors such as changes in hospitals' admission policies. All else being equal, the number of "serious injury" cases would rise, and the number of "slight injury" cases would fall, if it became standard procedure for a hospital to keep in overnight, for precautionary reasons, casualties with a particular type of injury.

The increase in the number of "serious" injury accidents in 1994 was partly attributed to a change in the health boards' policies in admitting more child casualties for overnight observation, which in turn changed the classification of many injuries from "slight" to "serious". The number of child casualties recorded as having serious injuries in 1994 was 35 per cent higher than in the previous year. There could also be changes in hospitals' procedures that would reduce the numbers of "serious injury" cases.

In addition, there is anecdotal evidence that changes in procedures for assigning severity codes may affect the categorisation of injuries. For example, different severity codes might be assigned by a police officer who was at the scene of an accident and by a clerk who bases the code on a police officer's written description of the accident.

#### 11.4 Some other definitions

**Built-up roads**: accidents which occur on "built-up" roads are those which occur on roads which have speed limits of up to 40 miles per hour (*ignoring* temporary speed limits on roads for which the normal speed limit is over 40 mph).

Children: people under 16 years old.

**Pedestrians**: includes people riding toy cycles on the footway, people pushing bicycles, occupants of prams or wheelchairs, and people who alight safely from vehicles and are subsequently injured.

#### 11.5 Scottish specific casualty reduction

Scotland's Road Safety Framework was launched in June 2009. It set out the vision for road safety in Scotland, the main priorities and issues and included Scotland-specific targets and milestones which were adopted from 2010. These targets and milestones are:

| Target                                 | 2015 milestone % reduction | 2020 target % reduction |  |
|--|----------------------------|-------------------------|--|
| People killed                          | 30%                        | 40%                     |  |
| People seriously injured               | 43%                        | 55%                     |  |
| Children (aged < 16) killed *          | 35%                        | 50%                     |  |
| Children (aged < 16) seriously injured | 50%                        | 65%                     |  |

Each reduction target will be assessed against the 2004/08 average. In addition to the targets a ten per cent reduction target in the slight casualty rate will continue to be adopted.

#### 11.6 The calculation of the "indicative lines" shown in the graphs

One way of assessing progress towards the targets is to compare actual casualty numbers in each year with an indicative line that starts at the baseline figure in 2004-08 and falls, by a constant percentage reduction in each subsequent year, to the target for 2020. This is the approach adopted by the GB Road Safety Advisory Panel. The indicative line starts at the baseline figure in 2006 as that is the middle year of the baseline period. Other approaches could have been used: there are many ways of producing lines that indicate how casualty numbers might fall fairly steadily to the targets for 2020.

The method adopted to produce the indicative target lines shown in Figure 4 involves a constant percentage reduction in each year after 2006 to the 2015 milestone, then a constant percentage reduction between 2015 and 2020. The resulting indicative target lines represent the percentages of the baseline averages which are shown in the table below. They are not straight lines, because of the compounding over the years effect of constant annual percentage reductions (to two decimal places, the falls are: 3.89% p.a. for killed to meet the 2015 milestone and 3.02 between 2015 and 2020. For seriously injured casualties the falls are 6.06% and 4.61%. For child killed 4.67% and 4.37 or seriously injured 7.41% and 6.90.

|      | Killed     |             | Serious    |             | Child<br>killed |             | Child<br>serious |             |
|------|------------|-------------|------------|-------------|-----------------|-------------|------------------|-------------|

<sup>\*</sup> As numbers are small, a three-year average is included in the table to smooth out large fluctuations in the numbers.

#### SCOTTISH GOVERNMENT STATISTICIAN GROUP

#### **OUR AIM**

To provide relevant and reliable information, analysis and advice that meet the needs of government, business and the people of Scotland.

#### **OBJECTIVES**

- 1. To produce statistics and analysis relevant to user needs by
  - Developing our understanding of customer requirements to ensure statistics are kept relevant and analysis is well targeted;
  - Developing the range of statistics and analysis we produce;
  - Where practicable improving timeliness;
  - · Providing more statistics disaggregated by age, gender and ethnicity;
  - · Developing more data for small areas through the Neighbourhood Statistics project;
  - Contributing to production of comparable statistics across the UK and internationally.
- 2. To ensure effective use of our statistics by
  - · Contributing more directly to policy processes inside and where possible outside government;
  - Improving access to and presentation of data and analysis;
  - Improving the advice provided on statistics.
- 3. To work effectively with users and providers by
  - Maintaining arrangements to consult and involve users and providers;
  - Involving users and providers in planning developments in outputs and processes;
  - Minimising the burden on data providers through dropping or streamlining collections as appropriate, to ensure the benefits of the information justify the costs of collection.
- 4. To develop the quality of statistics by
  - Assuring and improving quality as an integral part of data collection and analysis and through regular reviews in line with National Statistics quality strategy;
  - Developing statistical methods, systems and classifications;
  - Working with the rest of the Government Statistical Service to develop joint approaches/solutions where appropriate.
- 5. To assure the integrity of statistics by
  - Maintaining and promoting integrity through implementation of the National Statistics Code of Practice and related protocols;
  - Safeguarding the confidentiality of data subjects.
- 6. To ensure the efficient and effective delivery of statistics products and services by
  - Making best use of all sources including administrative sources;
  - Working with other analysts to maximise the contribution of our own and other analysts' work;
  - Ensuring value for money;
  - Making best use of Information and Communications Technology;
  - Ensuring effective communication within the Statistician Group.
- 7. To develop our workforce and competences
  - Ensuring recruitment of staff with the necessary skills and potential;
  - Ensuring development of expertise amongst existing staff;
  - Promoting and upholding the standards of the statistics profession.

#### This is a National Statistics publication

"This is a National Statistics publication. It has been produced to high professional standards set out in the <u>National Statistics Code of Practice Protocol</u>.

These statistics undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference."

Details of pre-release access will be provided in the Scottish Government Statistics Website under 'Forthcoming Releases'

#### A NATIONAL STATISTICS PUBLICATION FOR SCOTLAND

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be interpreted to mean that the statistics: meet identified user needs; are produced, managed and disseminated to high standards; and are explained well.
