162	Appendix WSP11	– Snow and Ice Build-Up on Bridges
163	Appendix WSP12	– Arrangements and Mitigation Measures for Vulnerable Locations
172	Appendix WSP13	– Route Altitude Map
173	Appendix WSP14	– Daily Winter Action Plan
175	Appendix WSP15	– Winter Service Plant (Sch 2 App 6 - 6.1.6, 6.1.7, 6.1.8, 6.1.9, 6.1.10)
178	Appendix WSP16	– Forms Completed by Winter Maintenance Operational Staff (Sch 2 App 6 – 6.1.1)
181	Appendix WSP17	– Operating Company’s Compounds, Depots and Facilities (Sch 2 App 6 – 6.1.11)
182	Appendix WSP18	– Decision Matrix for Winter Service
186	Appendix WSP19	– Snow and Ice Clearance on Footways, Footbridges and Cycleways
187	Appendix WSP20	– Snow Forecast Resource Deployment Matrix
188	Appendix WSP21	– De-icing Material (Sch 2 App 6 – 6.1.5)
190	Appendix WSP22	– Carriageway Snow and Ice Clearance Procedures
193	Appendix WSP23	– South East Salt Tonnage Targets
195	Appendix WSP24	– Drivers’ Rotas
196	Appendix WSP25	– List of Winter Plant Registration Numbers
199	Appendix WSP26	– Salt Resilience Days per Depot
200	Appendix WSP27	– Winter Service/ISU/TRISS – Action Plan Covid-19 Risks for 2020/21
203	Appendix WSP28	– Not used
204	Appendix WSP29	– Not used
205	Appendix WSP30	– Consultation Certificate/Minutes of Consultation Meetings

## Introduction

This is the Winter Service Plan (WSP) provided under the Scottish Trunk Road Network Management Contract for the South East Unit, which will operate from 16 August 2020 for the initial Contract Term until to 15 August 2028.

Within this WSP, the term “Network Maintenance Contract” refers to the above Contract.

This WSP has been developed in full compliance with the requirements set out in Schedule 2 Appendix 6 of the NMC and with reference to the “Manual for the Management of the Risk of Unplanned Network Disruption” and details how BEAR Scotland will provide the Winter Service on the South East Unit.

This WSP covers the following trunk roads in Scotland:

- **M8/A8 Edinburgh - Greenock Trunk Road** from its junction of the A720 at and including Hermiston Roundabout Edinburgh leading generally westwards for a distance of 41 kilometres or thereby to the junction of the A8 with the M8 at Newhouse, including that part of the said Trunk Road branching generally north-eastwards west of Edinburgh for a distance of 2 kilometres or thereby to its junction with the M9 south of Newbridge Roundabout Edinburgh.
- **M90/A90 Edinburgh – Fraserburgh Trunk Road** from the M9 Junction 1A at Humber leading generally north for a distance of 18 kilometres or thereby to the M90 Junction 3 at Halbeath including the Queensferry Crossing and incorporating the A90 section from M90 Junction 1 to M90 Junction 1A.
- **M90/A90 Edinburgh – Fraserburgh Trunk Road** from A90 Dalmeny leading generally westwards for a distance of 1 kilometre or thereby to A90 Scotstoun Junction/M90 Junction 1.
- **A9000 Queensferry – North Queensferry** from A90 Echline Junction generally northwards for a distance of 4.2 kilometres or thereby to M90 Ferrytoll Junction 1B, including the Forth Road Bridge.
- **A823(M) Pitreavie Spur Trunk Road** from its junction with the M90 Junction 2 at Masterton leading generally westwards for a distance of 1.5 kilometres or thereby to its junction with the A823 but excluding Pitreavie Roundabout Dunfermline.
- **M9/A9 Edinburgh - Stirling - Thurso Trunk Road** from its junction with the M8 south of Newbridge Roundabout Edinburgh leading generally north-westwards for a distance of 52 kilometres or thereby to its junction with the A9 at but excluding Keir Roundabout Stirling and including Bannockburn Roundabout Stirling (M9 Junction 9).
- **M80 Glasgow – Stirling Trunk Road** from the M80 Junction 4 Haggs leading generally north-eastwards for a distance of 31 kilometres to its junction with the M9 at Bannockburn Interchange Stirling (M9 Junction 9).
- **M876/A876 Dennyloanhead – Kilbagie Roundabout Trunk Road** (1) from its junction with the M80 at Bankhead Interchange Dennyloanhead Falkirk leading generally north-eastwards for a distance of 9 kilometres or thereby to its junction with the M9 at Hill of Kinnaird Interchange Stenhousemuir (M9 Junction 8); and (2) from its junction with the

M9 at Kinnaird House Interchange Stenhousemuir (M9 Junction 7) leading generally north-eastwards for a distance of 8 kilometres or thereby to the termination of the A876 at the Kilbagie Roundabout.

- **A1 Edinburgh - Berwick Upon Tweed Trunk Road** from a point lying to the west of its junction with the A720 at Old Craighall Edinburgh leading generally eastwards for a distance of 77 kilometres or thereby to the Scotland – England border. The main carriageway and slip roads of the A1 as follows have special road status. The main carriageways and designated slip roads from a point 70 metres east of the point where the B6415 crosses under the A1 at Old Craighall to the western edge of Thistly Cross Junction.
- **A720 Edinburgh City Bypass** from its junction with the A1 at and including Old Craighall Roundabout Edinburgh leading generally westwards for a distance of 22 kilometres or thereby to a point lying to the north of its junction with the M8 at Hermiston Interchange Edinburgh. The length of main carriageways and slip roads of the A720 as follows have special road status. The main carriageways and designated slip roads from the junction with the M8 at Hermiston Gait as shown, at its junction with Calder Road and to its junction with the A1 at Old Craighall and including the Sheriffhall roundabout.
- **A6091/A7 Melrose - Galashiels - Carlisle Trunk Road** from its junction with the A68 at but excluding Ravenswood Roundabout Newtown St. Boswells leading generally south-westwards for a distance of 86 kilometres or thereby to the Scotland – England border.
- **A68 Edinburgh - Newcastle Upon Tyne Trunk Road** from its junction with the A720 at the Millerhill Junction leading generally south-eastwards for a distance of 83 kilometres or thereby to the Scotland – England border.
- **A702 Edinburgh - Abington Trunk Road** from its junction with the A720 at and including the northernmost roundabout at Lothianburn Junction Edinburgh leading generally south-westwards for a distance of 59 kilometres or thereby to its junction with the A74(M) at and including the west most roundabout leading on to the A74(M) at Abington Interchange (A74(M) Junction 13).
- **A985 Kincardine - Rosyth Trunk Road from Higgins' Neuk Roundabout** generally eastwards for a distance of 22 kilometres or thereby to its junction with the M90 at and including Admiralty Roundabout (M90 Junction 1).
- **A977 Gartarry Roundabout – Kincardine Trunk Road** from and including the Gartarry Roundabout, Clackmannanshire, to and including the Toll Road junction where it meets the A876, and then on to the junction with the A985 at the Longanet Roundabout, Kincardine, a distance of 5 kilometres or thereby.

The purpose of this WSP is to show how BEAR Scotland will:

- Plan its winter service operations for dealing with forecast and actual winter conditions on or near to the South East Unit.
- Carry out its winter service operations.
- Minimise, where possible, the duration of any winter weather incidents and their impact.

- Identify and deliver mitigating measures to prevent the occurrence of winter weather incidents as per Schedule 2 Section 6.1.8. Whilst individual reviews can be undertaken the Disruption Risk Workshops as detailed in 3. Schedule DRMP1 – Incidents Data and Risk Registers within the Disruption Risk Management Plan provides a framework for problems/solutions to be discussed/recorded/actioned.

This WSP is a controlled document within BEAR Scotland’s Quality Management System.

The WSP will be kept under review prior to and during the Winter Service Period, any proposed amendments shall be submitted to and approved by the Director prior to being incorporated in the WSP.

This WSP will be distributed on first issue and on each re-issued as detailed on Page 3.

The WSP is part of the overall Disruption Risk Management Plan (DMRP). The relationship between the DRMP, WSP and other supporting plans and records is shown schematically in Figure 1.

**Figure 1**

## **Item 1 – Management Arrangements**

### **1.1 Severe Weather Manager**

#### **1.1.1 Name**

The Severe Weather Manager (SWM) will be xxxx xxxx (xxxx xxxx).

#### **1.1.2 Qualifications**

xxxx xxxx has:

- BEng Transportation Engineering
- CSCS Professionally Qualified Person
- Chartered Member of the Institution of Highways and Transportation
- Certificate of Professional Competence in Fleet Management
- Conversant with the Appendix H Winter Service Practical Guidance

#### **1.1.3 Experience**

xxxx xxxx has been involved in winter service operations throughout his time on the 2G, 3G and 4G Contracts and was the Winter Service Manager for the SE Unit during the 2012/2013 and 2013/2014 winter seasons.

xxxx xxxx has been the North East Winter Service Manager since January 2018 and is responsible for the preparation of the Winter Service Plan, preparation of the winter fleet, training of winter operational staff and training/mentoring of Winter Service Duty Officers.

His experience and training allows him to advise and mentor the Winter Service Duty Officers through the decision making process ensuring that daily winter action plans are in compliance with the Contract requirements and effective in keeping the road network free from ice and snow.

#### **1.1.4 Responsibilities**

The SWM is responsible for producing the Winter Service Plan for consent by Transport Scotland. The SWM is responsible for the operation, review and development of that Plan throughout the winter season, thus ensuring the Operating Company fully discharges its responsibilities under the Contract.

The SWM/WSDOs are responsible, on behalf of the Operating Company, for winter maintenance activities including:

- collection and management of weather data
- maintaining salt stock levels and their storage facilities
- achieving response times for precautionary treatment, patrols and snow clearance
- plant and communications
- the Road Weather Information System (RWIS), weather forecasting service and weather radar system
- training of staff and operatives
- preparation and updating of rotas for duty staff
- maintaining electronic records and manual records

- providing an annual winter service report
- liaising with third parties
- communication with Transport Scotland during severe weather events
- participation in conference calls with Transport Scotland as required
- implementing additional resources when required
- reporting weekly salt stock levels to the Scottish Salt User Group through the DfT portal
- ensuring completion of Daily Action Plans and uploading to Vaisala Manager

## **1.2 Winter Service Duty Officers (WSDOs)/Duty Severe Weather Managers/Incident Liaison Officers (ILOs)**

### **1.2.1 Names**

WSDO are:

- xxxx xxxx
- xxxx xxxx
- xxxx xxxx
- xxxx xxxx

Additional staff will be mentored to develop them as future WSDOs.

### **1.2.2 Qualifications**

All WSDOs have undertaken suitable training in relation to winter service decision making and weather forecast interpretation, including training subjects such as road meteorology and winter service computer systems. All were previously approved as WSDOs for the 4G Contract SE Unit.

xxxx xxxx – HNC Civil Engineering, 10 years' road maintenance experience, 3 years WSDO experience in SE and completed IHE Winter Decision Makers' Course in February 2017.

xxxx xxxx – 4 years road maintenance experience, 4 years WSDO experience in SE and completed IHE Winter Decision Makers' Course in February 2017.

xxxx xxxx – 20 years trunk road experience, 8 years' experience as a WSDO, Vaisala Road DSS Navigator Training September 2015 and Met Office Open Road Training September 2015,

xxxx xxxx – 13 years WSDO experience, Met Office Open Road Training September 2014, Vaisala Road DSS Navigator Training September 2018

### **1.2.3 Experience**

WSDOs will either have a minimum of 4 years' relevant experience or have passed the IHE Winter Decision Makers' Course ensuring competent and consistent winter decision making.

### **1.2.4 Responsibilities**

The SWM will be supported by 4 No. WSDO working on a rotational basis. These posts are an integral part of the service as they provide immediate support and guidance to the Network Hub staff,

allowing them to process the information being received whilst the WSDO interpret the forecast, make decisions on treatment and prepare the Daily Action Plan. The WSDO is solely authorised to take decisions and issue instructions to direct the Winter Service.

The on duty WSDO shall be located and on duty in the Central Office Network Hub during the Winter service period when the road surface temperatures are forecast to be below 3°C. During periods of severe weather additional staff will assist in the Network Hub.

All WSDO shall have previous experience of monitoring the road sensor system and making decisions on treatment resulting from the receipt of the forecast information from the supplier.

All the WSDO named will be fully trained in basic road meteorology including the use, and interpretation, of ice prediction systems.

### **1.2.5 Duty Severe Weather Manager**

Over and above the contractual requirements there will be a Duty Severe Weather Managers' rota to assist the Severe Weather Manager in supporting the WSDOs as required. All have significant experience in Winter Service.

The Duty Severe Weather Managers are:

- xxxx xxxx
- xxxx xxxx

### **1.2.6 Incident Liaison Officer – Network Hub (ILO)**

The ILOs will be based in the Network Hub. The Network Hub is staffed by a team of approved ILOs(Network Hub) working to 4 days on, 4 days off shift pattern that ensures it is operated on a 24 hours a day, seven days a week basis.

The ILOs are:

xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx and xxxx xxxx.

The ILOs will assist the WSDO in providing the winter service in an administrative capacity.

ILOs will assist the WSDOs in maintaining and updating of operational records including the following:

- treatment records and patrol records
- material usage
- road closure locations and times
- logs of communications to and from vehicles on route & any other sources
- software faults
- electronic data from data loggers
- reserve and additional plant paper records
- social media updates
- upload of Daily Action Plans to CMS

## **1.3 Monitoring Arrangements**

### **1.3.1 Monitoring arrangements during normal working hours**

Monitoring will be carried out by staff in the Network Hub from 1 October to 15 May 24/7, including

- Contact with expert weather forecast provider including “change triggers”
- Feedback from inspectors during normal working hours
- Monitoring of weather sensors
- Compilation of daily action plan
- Monitoring Road Surface Temperatures (RSTs) trend against forecast
- Use of weather and Traffic Scotland cameras
- Weather radar
- Communications from external parties.
- Mobile road condition monitoring data and camera images will be relayed to the Network Hub and the Traffic Scotland National Control Centre via a web-based application
- Feedback from patrols and other drivers
- Monitoring snow and ice formation (accretion) on the structures of the Queensferry Crossing and Forth Road Bridge – See Appendix WSP11

### **1.3.2 Monitoring arrangements outwith normal working hours**

The South East Unit Network Hub will be based at BEAR Scotland’s South Queensferry Office and will be staffed on a rotational basis 24/7.

The contact number for the Network Hub is:

XXXX XXXX

The Network Hub will have access to all relevant contact phone numbers and winter maintenance systems such as Vaisala Bureau, specialist forecasts from MetDesk, Locatu, communications log database and weather radar.

When the road surface temperature is forecast to be below 3°C the WSDO will be on duty in the Network Hub as required by Schedule 2 Section 6.2.10 of the NMC.

There will also be a dedicated telephone line for Police Scotland within the Network Hub. This allows direct contact at all times between Police Scotland and staff in our Network Hub. This number will only be issued to Police Scotland.

## **1.4 Personnel Resources**

The resources detailed below will be the minimum numbers involved in delivering the winter service:

- 1 No. Severe Weather Manager, supported by Duty Severe Weather Managers
- 4 No. Winter Service Duty Officers
- 10 No. Winter Service Duty JTRCs/Incident Liaison Officers
- 68 No. Winter drivers (See Appendix WSP24 – Winter and Patrol drivers)
- 26 No. Patrol drivers (see WSP24)

## **1.5 Call-Out Arrangements**

### **1.5.1 Call-out arrangements during normal working hours**

A winter rota will be prepared at the beginning of the winter season for staff and operational staff involved in the winter service. Rotas are available in BEARnet using hyperlink below.

xxxx xxxx

Any changes to the rota will be communicated to the relevant parties involved in providing the winter service.

At all times it will be the responsibility of the duty WSDO to ensure that a clear line of communication is kept to all key personnel involved in providing the winter service for that week.

It is anticipated that the requirement for call-out will be minimal from the beginning of November until the end of March, when a dayshift/nightshift system will be in place, with drivers immediately available on the Unit 5 days per week during the normal working week. Outside this period there will be 24-standby covered by two shifts.

From 1 October to 31 October and 1 April to 15 May a 24hr driver standby rota will be in place.

In the event of a winter conditions being forecast between 16 May and 30 September standby arrangements will be put in place as per Schedule 2 Section 6.1.4 of the NMC.

### **1.5.2 Call-out arrangements outwith normal working hours**

It is the role of the WSDO to ensure the appropriate drivers are contacted and advised of the required winter action treatment. The personnel on the rota shall be available to mobilise and commence treatment on the carriageway within 1 hour of being contacted.

### **1.5.3 Contact arrangements during normal working hours**

Each individual involved in providing the winter service shall be issued with a mobile phone to allow easy contact. When drivers are on winter duty for any given week, cognisance of this will be taken into account when planning normal daily duties. This will ensure that drivers still have the ability to respond quickly to any call to carry out a winter service action at short notice within the contractual response times.

### **1.5.4 Contact arrangements outwith normal working hours**

As 1.5.3 above on-call drivers will be supplied with mobile phones.

### **1.5.5 Mobilisation Times**

Depots have been positioned in locations where both the Trunk Road precautionary treatment routes and drivers are easily accessible; this ensures that drivers are consistently able to access the start of each precautionary treatment within one hour of a call from their home. To assist in the speed of access to the gritting routes, spreaders may be pre-loaded on any night when action is a possibility.

## 1.6 Communications Equipment

Good communication systems are essential for effective winter maintenance management and the following systems will be adopted:

- telecommunications – landline and mobile
- satellite tracking of BEAR Scotland vehicles
- e-mail
- Airwave communication
- internet – refer Communications Plan
- social media e.g. Twitter, Instagram, WhatsApp etc - refer to Communications Plan
- MS Teams/Zoom conference calls
- Push To Talk radio (PTT) to Schedule 5 Clause 2805AR will be fitted to winter maintenance vehicles to aid communication, particularly in severe weather

All depots will be contactable by both landline telephone and email. In addition, all managers, supervisors, and winter maintenance operational staff will have mobile telephones so that they can be contacted at all times. In the case of winter maintenance vehicles, hands-free mobile phones are fitted.

BEAR Scotland vehicles are fitted with an integrated satellite tracking system (Locatu) to deliver communications needs, management system and produce an auditable trail of actions undertaken. This information will also be available via an approved app to Schedule 5 Clause 2804AR.

Airwave communication is fitted to both Category A and B patrol vehicles. The Network Hub will host the Airwave base station. All staff will be trained in the use of the system.

## 1.7 Training for Managers and Other Staff

### 1.7.1 Details of previous training

All current WSDOs have been trained in basic road meteorology and winter service computer systems. Depending on experience some WSDOs will attend the IHE Winter Decision Makers' Course. All winter drivers will be trained to SVQ/City & Guilds level or equivalent in winter maintenance.

### 1.7.2 Details of proposed training

Prior to the commencement of the winter season, a training programme will be carried out for all personnel involved in providing the winter service. All training will be recorded. The SWM is responsible for organising all winter training. This will include the following:

- Refresher training for WSDOs on decisions, communication, contract requirements etc;
- Seminar for winter drivers detailing treatment routes, Contract requirements, response times, treatment times, communication, health and safety and vulnerable areas;
- Practical training on route familiarisation and plough fitting;

- New recruits to the winter service will be fully trained prior to any involvement in providing the winter service and mentored.
- Dry runs of all precautionary treatment routes will be undertaken prior to the start of each winter period.

BEAR Scotland staff will also participate in the annual “snow desk” winter scenario training when requested to do so by the Director.

## Item 2 – Weather Forecasting

### 2.1 Purpose

The meteorologists working for the expert weather forecasting service provider supply an accurate indication of weather conditions so that the personnel involved in the provision of winter service are able to prepare a winter action plan which shall prevent or anticipate prevailing weather conditions and allow sufficient time to pre-treat the carriageway prior to the onset of snow or ice.

### 2.2 Methodology

Weather models are used to produce both the short-range and long-range weather forecasts.

The road model forecasts can be updated as frequently as necessary using actual data from road sensors and data from comprehensive meteorological databases. These are monitored and updated by forecasters around the clock.

### 2.3 Weather Forecasting Service

The expert weather forecasting service will be provided by MetDesk.

MetDesk,  
3 Station Approach,  
Wendover,  
Aylesbury,  
Buckinghamshire,  
HP22 6BN

The service shall consist of the following:

- 36 hour forecast text (midday)
- 36 hour forecast graphs for each forecast station within South East Unit
- Evening updates to both 36 hour text & forecast graphs
- 2-10 day text forecast (provides early warning of severe weather)
- Forecast consultancy service for advice 24/7.

Weekly weather forecast accuracy reports will be provided by 1200 hours on the first working day of the following week as per Schedule 2 Section 6.1.18 (d).

The above will allow the WSDO to prepare a daily winter action plan each day which must be uploaded to the Traffic Scotland Service Website via CMS by 1400 hours, advising of all carriageway pre-treatments to be carried out for that day. The DAP will be shared with relevant Stakeholders electronically.

### 2.3.1 Climatic Domains

Route based climatic domains are related to the 20g treatment routes. Route specific temperature forecasts are provided for each day of the Winter Service season. See APPENDIX WSP10 FORECAST DOMAINS

Domain Number	Route	Location
1	A7	Terrona
2	A68	Soutra
3	A1	Grantshouse
4	A720	Swanston
5	A702	Abington
6	M8	Whitburn
7	M80	Haggs
8	M90	Halbeath
9	M90/A9000	Forth Road Bridge NW

**Figure 2**

### 2.3.2 Weather Radar

The WSDOs will have access to a web-based radar facility provided by MetDesk, 24 hours a day, seven days a week, throughout the winter season to supplement forecast information. The radar improves the accuracy of assessing the timing, nature and intensity of precipitation, particularly snowfall.

### 2.3.3 Weather Stations, Forecasts Sites and Camera Sites

Sensors are strategically placed throughout the network. The sensors will be polled every 10 minutes between 1 October and 15 May. Weather forecast sensors have added functionality to allow modelling of the temperature characteristics of the road pavement. They assist in producing road-specific weather forecasts.

Sensors are calibrated twice per year (prior to start of season and during the winter season) and their performance monitored electronically with any issues being checked out on site, as required.

### 2.3.4 Thermal mapping

Currently it is not proposed to use thermal mapping for decision making.

### 2.3.5 Location plan

See Appendix WSP4

## 2.4 Computer Systems

There are a number of computer systems used to interrogate forecast and sensor data to enable the SWM and WSDOs to make the most appropriate decisions. These systems include:

- Bureau service – for collection of weather sensor data. The bureau service is provided by Vaisala. The central database collects data from weather sensors at 10-minute intervals.
- Vaisala RoadDSS Manager - this allows the winter staff to interrogate the bureau to give the most up to date conditions at the weather sensor locations on the trunk road network. This allows them to make informed decisions in relation to winter service actions and direct resources appropriately for road surfaces across the Unit and the structures of the major bridges. Forecasts can also be accessed from the bureau allowing daily action plans to be created, distributed and stored. These action plans are monitored against the forecasts. Daily winter action plans are input directly into RoadDSS Manager and are emailed to interested parties. Actual Actions are also recorded in the system. Reports of actual actions completed can be generated as required by running treatment and action reports for the required routes. The system also holds archive data.
- All patrol spreaders and frontline spreaders will have a sensor to provide air temperature, road surface temperature and road surface state in real time and available in an archive.
- A web-based system supplied by MetDesk will also be utilised to access forecast data along with weather radar images. Weather radar images are particularly useful for predicting and monitoring precipitation conditions.
- Locatu is a web-based system with live GPS vehicle tracking and storage of vehicle telemetry data including spreading data.
- BEARnet is BEAR Scotland’s company intranet which holds all the Management System information and electronic records not held in Vaisala Manager or Locatu.

### Item 3 – Arrangements and Mitigation Measures for Dealing with Vulnerable Locations

BEAR Scotland will, throughout the Contract duration review these areas and add or remove locations as per Schedule 2 Section 6.2.32. Permission will be sought from the Director to make any amendments at least once during each Annual Period.

In the event of a Critical Incident resulting from a closure of a carriageway due to snow or ice the Director’s consent may be requested to add to the list of Vulnerable Locations as Schedule 2 Section 6.2.32.

All staff involved in Winter Service will be instructed to pay particular attention to the areas below. Any problems identified will be reported back and added to the communications log.

Vulnerable locations are known locations on the Network where:

#### 3.1 – Significant Gradient Areas

Road Number	Location
A7	Auchenrivock Improvement
A68	Soutra
M8	Livingston
A720	Calder to Baberton
A68	Carter Bar

A68	St Boswell to Ancrum
-----	----------------------

**Figure 3**

### 3.2 - Frost Susceptible Areas

Road Number	Location
M8	Junction 3 to Junction 5
A68	Huntsfords Bends to Carter Bar
A68	Pathead to Soutra Hill
A68	South of Soutra to Carfaemill Roundabout
A7	Newmills to Castle Hermitage Junction
A702	South of A703 Junction to North of West Linton
A702	Candymill to North of Coulter
A9000	Forth Road Bridge

**Figure 4**

### 3.3 – Water Runoff Areas

Road Number	Location
A1	Dunbar to English Border
A68	North of Fala
A7	North of Teviothead at Priestthaugh Junction (Amey comment - Drainage work completed but still minor issues)
A7	North of Skippers Bridge near Langholm
A7	South of Langholm - Entrance to Sewage Treatment Works
A702	Immediately North of Sliverburn
A702	North of Abington

**Figure 5**

For both frost susceptible and known surface water run off locations, the ability to monitor and receive up-to-date road surface temperatures and states is critical. All patrol and frontline vehicles are fitted with road condition sensors providing live information to WSDOs/ILOs allowing all areas to be monitored closely.

Arrangements and mitigation measures for dealing with individual vulnerable locations are detailed in Appendix WSP12.

## Item 4 – Decision Making

### 4.1 Role of the Severe Weather Manager (SWM)

The role of the Severe Weather Manager is to ensure that all procedures detailed in the Winter Service Plan are adhered to and that the most effective action plans are adopted each day to keep the carriageways and footways free from snow and ice.

It is the duty of the SWM to hold regular reviews throughout the winter season to address any problems which may have occurred. This will take the form of briefings to all key staff on nights where difficult road conditions have been experienced. The philosophy will be to have a 'preventative' approach rather than 'reactive' approach in all decision making.

The SWM or Duty Severe Weather Manager will support the WSDO.

## **4.2 Role of the Winter Service Duty Officer (WSDO)**

The WSDO is responsible for decision making, monitoring the ice detection system, monitoring Vaisala for any warnings or audible alarms and taking appropriate action, including updated forecasts and any dialogue with weather forecasters, to assess whether any changes are required to the daily action plan. Where any changes to the daily action plan are considered necessary then the WSDO will relay this information to the Depot Supervisors, confirming the decision.

Precautionary treatments will be undertaken where the road surface temperature is forecast to be less than or equal to 1°C.

When snow is forecast the WSDO shall consider the forecast elevations of snow using Appendix WSP13 when making the planned treatment decisions.

### **4.2.1 Winter Service Patrol Mobilisation**

From 1 November to 30 April the requirement to carry out a Winter Service Patrol will be established as part of the preparation of the daily action plan and instruction will be given as appropriate in accordance with Schedule 2 Section 6 where the road surface temperature is forecast to be less than or equal to 3°C.

As per Schedule 2 Section 6.2.21 the winter service patrols shall:

- (i) patrol all carriageways of trunk roads of the Unit except slip roads;
- (ii) report on road conditions encountered to, and take instructions on treatments from WSDOs;
- (iii) provide an immediate response when instructed to carry out treatments or other de-icing operations by the WSDO;
- (iv) deal with any situation on the winter service patrol route requiring immediate attention;
- (v) pay particular attention to the areas identified in Schedule 2 Appendix 6 Winter Service Attachment 6.7 Location of Known Vulnerable Locations;
- (vi) undertake short stops for minor maintenance activities such as clearing grips and removing debris; and
- (vii) provide daily reports in the format indicated in Schedule 2 Appendix 6 Winter Service Attachment 6.1 Appendices for Winter Service Plan, Table 6.1.1 Winter Service Patrol Report Record.

Routes have been designed to comply as follows:

Cat A patrols shall operate from 02:00 – 10:00 at two hourly intervals as per Schedule 2 Section 6.2.25. Between patrols, vehicles will park up at designated locations on their routes.

The route for the Cat A Patrols are designed so that the patrol vehicle, when working, is able to attend any location on its route within 30 minutes of a call from the WSDO/ILO. The “A” patrols alternate between a one-hour patrol and a one-hour standby on each route.

Cat B patrols shall operate from 00:00 to 09:00 at three hourly intervals i.e. 00:00 – 03:00, 03:00 – 06:00 & 06:00 – 09:00 as per Schedule 2 Section 6.2.26.

The winter service patrol routes shall be covered in the same direction in each period as per Schedule 2 Section 6.2.25.

The patrol vehicle will be fully loaded at the commencement of the winter service patrol as per Schedule 2 Section 6.2.23.

Patrols times may be amended from the above times should the weather forecast predict any snow accumulations on the route.

The winter service patrols will operate out with the specified times when forecasts indicate a high risk of severe conditions due to snow or ice. The vehicles will be used for snow clearance duties on any part of the trunk road network out with the normal patrol times. During the normal patrol times their snow clearance duties will be restricted to their patrol routes. The operational shift pattern used allows these patrols to be operated continuously 24 hours per day.

Patrol routes are detailed in Appendix WSP3

#### **4.2.2 Proposals for precautionary and additional de-icing treatments when low confidence forecasts shall be issued for variable road and weather conditions**

Precautionary treatments will be provisionally identified on an action plan prepared each day by 1300hrs following receipt of an expert weather forecast relayed through the ice prediction system. Treatments will be in accordance with the treatment matrices detailed in Attachment 6.1 Table 6.11.2 Treatment Matrix Spread Rates for Precautionary Treatments when road surface temperatures are forecast to fall to less than or equal to 1°C and/or when snow conditions are forecast as per Schedule 2 Section 6.3.5. Thereafter, and in particular, where forecasts are of low confidence, conditions will continue to be monitored by the WSDO; and where conditions require further precautionary treatments, these will be ordered whether part of the action plan or not. Where reserve vehicles are to be deployed to vulnerable locations this will be included as a plough and treat as necessary within the daily action plan and locations identified in the text of the daily action plan email.

#### **4.2.3 Proposals for monitoring the effectiveness of de-icing materials**

Winter Duty staff will use a variety of methods to assist with assessing the effectiveness of the de-icing materials which have been spread on the carriageway. These methods include:

- Weather stations detail residual salt and give alarms to indicate low residual salt under certain conditions, however, it should be remembered that particularly in drying out conditions such readings may be unreliable
- Warnings and alarms from weather stations
- Experience of local areas and previous actions
- Feedback from drivers & road condition sensors
- Footage from forward facing dash-cams on winter patrol vehicles, available to Duty staff and Traffic Scotland staff on a web-based application
- Advice from weather forecasters, particularly on likely precipitation (use of weather radar) which may cause salt to be washed from carriageway
- Feedback from external parties such as Police Scotland

The above will be used by the duty staff to make an informed decision as to the status of residual salt on the carriageway, and whether further treatment is required.

#### **4.2.4 Road closure snow gate operational procedures**

See 9.1.2

#### **4.2.5 Proposals for dealing with Vulnerable Locations**

See Item 3 Arrangements and Mitigation Measures for Dealing with Vulnerable Locations and Appendix WSP12 Arrangements and Mitigation Measures for Vulnerable Locations.

#### **4.2.6 Proposals for Using Alternative De-icers in Extreme Temperatures**

When Road Surface Temperatures are forecast to be less than MS 7°C consultation with the Director shall be held with a view to potentially utilising alternative de-icers which are more effective at such temperatures.

Alternative de-icers can be used (neat) as a de-icer and added to brine to make the brine/salt mixture more effective at low temperature. The alternative de-icer causes an exothermic reaction bringing the temperature of ice up to MS 5°C where salt starts to be reactive.

##### Method 1 - Precautionary Treatment with alternative de-icer

Consideration should be given when road surface temperatures are forecast to be below MS 7 °C to consider substituting the brine with a blend of brine and alternative de-icer in certain climatic conditions.

- Safecote should be used as a straight replacement for brine.
- Magnesium Chloride should be blended with the brine in a 15% magnesium chloride to 85% brine mixture. This equates to approximately 300 litres of magnesium chloride per treatment
- Potassium acetate is used specifically on bridge decks and is spread neat from additional tanks on modified combi-spreaders. Refer to specific route treatment cards.

##### Method 2 – Used neat on hard packed ice from a spray tanker or combi-spreader

Alternative de-icers such as Safecoat and Magnesium Chloride, etc can be used as spot treatments in the event of hard packed ice. Both will operate in extremely low temperatures where traditional Rock Salt is ineffective.

Once the Safecoat and/or Magnesium Chloride is applied to the surface of the ice a further application of salt may be required. A period of time may be required between each application as this helps to break down the hard-packed ice. If the ice is particularly thick and conventional ploughing is not successful then the Raiko Icebreaker or a hard-edged plough could be used. Two of the tractors used by BEAR Scotland will be capable of operating an icebreaker.to a large tractor.

### **Item 5 – Liaison and Communication**

**5.1.1** BEAR Scotland shall consult with operational partners in the preparation of the Winter Service Plan and discuss winter service provision at the regular liaison meetings held with the adjacent local authorities and Operating Companies to ensure that there are no issues at boundary interfaces. We will also undertake liaison meetings with Police Scotland prior to the start of the winter season to apprise them of the details of the Winter Service Plan.

We will use a variety of social media forums to proactively inform the travelling public of the winter service we will provide. For example, Twitter messages will advise the public of the daily forecast, the action to be taken and when it will be carried out.

Our plans for liaison and communication are as follows:

**(i) The Director**

At the completion of each winter season, BEAR Scotland will prepare an Annual Report in accordance with Schedule 2 Section 6.1.19. This report will be submitted to the Director prior to 31 May; and within 15 working days, an annual review meeting will be held to discuss the contents of the report and performance of BEAR for the winter season just ended. Comments will be taken on board by BEAR in the preparation of the Winter Service Plan (WSP) for the forthcoming season and amendments to the previous WSP made prior to submission by 31 July. Completed current certificates of consultation (Certificate #25SE) with key Stakeholders will be uploaded to the BEARNet and are included in Appendix WSP30. However Transport Scotland has confirmed that minutes of meetings will suffice and certificates are not required.

On a daily basis, the BEAR Scotland daily winter action plan will be uploaded to Vaisala Manager which Transport Scotland and PAG have access to view.

During periods of prolonged severe weather, BEAR Scotland will update the Director at one hour intervals of conditions on the Trunk Road network or at intervals instructed by the Director. This will generally be done via a conference call or the Multi Agency Response Team (MART). If a road is closed due to severe weather conditions, the Director will be immediately informed by a phone call or text message and confirmed in writing via email within 12 hours of the closure.

Situation reports will issued hourly to provide updates and/or information on anticipated reopening times to Transport Scotland and Traffic Scotland.

**(ii) Police Scotland**

For compiling the annual Winter Service Plan, proposed amendments will be discussed with Police Scotland prior to submitting the WSP to the Director for his approval. The discussion shall take the form of reviewing the draft WSP for the forthcoming season. Police Scotland will comment on any problem areas which they think may be improved upon.

During the winter season, it is essential that good communication lines are kept between BEAR and Police Scotland. This is particularly the case during periods of severe weather. A dedicated phone line will be set up for the emergency services and should only be known to them, thus enabling Winter Service Duty Officers to clearly identify emergency calls from any emergency service including Police Scotland.

BEAR Scotland will also liaise closely with Police Scotland during severe weather to ensure that a consistent message is given to media and road users as to road conditions at any moment.

**(iii) The Traffic Scotland Operator and Infrastructure Services Contractor**

During periods of severe weather BEAR Scotland will liaise closely with Police Scotland and Traffic Scotland so that consistent and accurate messages can be displayed on the variable message signs and on the Traffic Scotland web site.

BEAR Scotland's Daily Action Plan shall be submitted to the Traffic Scotland Operator on a daily basis by no later than 15:00 hours.

Situation reports are completed for any incidents on the network resulting in a lane or carriageway is closed. When periods of severe weather are forecast by the Met Office network condition reports will be provided by Multi Agency Response Team staff or Network Hub staff at the frequency requested by Transport Scotland as per Schedule 2 Section 6.2.15. Push to Talk radio communication will be used by BEAR Scotland MART staff to get site information from drivers.

#### **(iv) Adjacent Road and Highway Authorities**

Adjacent road authorities, highway authorities, adjacent Trunk Road Operating Companies and DBFOs will be issued with an electronic copy of the WSP.

BEAR Scotland will issue daily to all adjacent road authorities its daily winter action plan and receive the same in return.

Winter issues shall also be an item on the agenda at liaison meetings with all adjacent roads and highway authorities.

#### **(v) Network Rail**

There are no railway crossings on the South East Unit, however on a daily basis, the BEAR Scotland daily winter action plan will be submitted to Network Rail.

#### **(vi) Other Operational Partners**

BEAR Scotland will interact with other Operational Partners as required.

## **Item 6 – Mutual Aid Arrangements**

### **6.1 Mutual Aid**

**6.1.1** BEAR Scotland will liaise closely with already well-established winter maintenance contacts within all local authorities to co-ordinate resources including labour, plant and salt to assist any party requiring mutual aid. Mutual aid arrangements have been discussed with the previous Operating Company Amey to ensure continuity.

Management of mutual aid shall be agreed and co-ordinated at a senior management level and shall be recorded in full detail. Mutual aid could take the form of supplying materials, plant or labour.

Any agreement to free resources for mutual aid shall be agreed with Transport Scotland in advance, taking into consideration:

- current weather hazards on the Trunk Road network
- weather forecast
- prioritisation of need

DBFO/Local Authority Contacts:

- M8 DBFO (Amey) - xxxx xxxx

- NE Unit (BEAR Scotland) – xxxx xxxx
- NW Unit (BEAR Scotland) - xxxx xxxx
- SW Unit (Amey) – xxxx xxxx
- M80 DBFO (BEAR Scotland) xxxx xxxx
- M6 DBFO (Autolink) – xxxx xxxx
- Edinburgh City Council – xxxx xxxx
- Midlothian Council – xxxx xxxx
- East Lothian Council – xxxx xxxx
- West Lothian Council – xxxx xxxx
- Falkirk Council – xxxx xxxx
- North Lanarkshire Council – xxxx xxxx
- South Lanarkshire Council – xxxx xxxx
- Stirling Council – xxxx xxxx
- Dumfries and Galloway Council - xxxx xxxx
- Clackmannanshire Council – xxxx xxxx
- Fife Council – xxxx xxxx
- Police Scotland Trunk Road Policing - xxxx xxxx

If requested Mutual Aid will be provided to Harthill Services, Edinburgh Airport, the Refinery at Grangemouth, Northumberland Council, M80 DBFO, M6 DBFO and any other agencies at request.

Welfare kits as per Schedule 2 Section 6.2.9 – winter service vehicles will carry welfare kits for distribution in the event of a Critical Incident that involves stranded vehicles comprising of the following:

- 24 emergency blankets
- 24 bottles of water
- 24 energy bars

BEAR Scotland will support the Director in the operation of the Scottish Salt Group as per Schedule 2 Section 6.1.17.

## **Item 7 – Winter Service Patrols**

### **7.1 Winter Service Plant and Reporting**

From 1 November to 30 April inclusive Winter Service Patrols shall be carried out on all routes in the South East network as shown in Appendix WSP3 (Table 6.1.2 Patrol Routes). Appendix WSP3 also contains a map of the Winter Patrol Routes for the South East Unit.

**7.1.1** The plant designated to carry out these patrols is detailed in Appendix WSP15 (Table 6.1.6).

**7.1.2** Each patrol route driver shall update their patrol record sheet as detailed in Appendix WSP16 Patrol Record during their patrol and submit the final record on completion of their shift which will include any treatments they have carried out. In the event of deteriorating conditions they will advise the WSDO.

## **Item 8 – Treatment Routes**

### **8.1.1 Precautionary Treatment Routes**

- (i) Route cards for carriageway precautionary treatment routes are detailed in Appendix WSP1 Precautionary Treatment Routes to Table 6.1.2 20 g/m<sup>2</sup> Routes and to Table 6.1.2 40 g/m<sup>2</sup> Routes. The plant designated to carry out these treatment routes is detailed in Appendix WSP15 (Table 6.1.7).

All routes have been designed to ensure that treatment time will be completed within 2 hours of commencement. Furthermore, each route has been assessed to ensure that the 1 hour contractual response time in Schedule 2 Section 6.3.18 will be met.

During precautionary treatments, all Winter Service Plant shall be driven in a manner appropriate to the prevailing weather conditions. The speed limit for salting is 40 mph as per Clause 6.3.6.

Dry runs will be carried out prior to the 1 October each year.

Records of preparation training will be retained.

A map of each proposed route has been provided in WSP1 (Table 6.1.2 20 g/m<sup>2</sup> Routes and 40 g/m<sup>2</sup> Routes). These will be further developed to incorporate all treated areas including slip roads.

The total width of carriageway areas shall receive precautionary treatments as per Schedule 2 Section 6.3.4 including;

- Slip Roads;
- Hardshoulders;
- Hardstrips;
- Turning lanes;
- Central reservation crossover;
- Contiguous laybys;
- Bus bays;
- Car parks;
- Cycle lanes;
- Hatched areas.

Treatment of 2+1 sections and junctions and areas deemed to be contiguous will be undertaken in accordance with Schedule 2 Section 6.3 Treatments with the spread pattern adjusted to suit the carriageway layout. Areas of more than three lanes will be treated in two passes as per the Route Cards.

Non-contiguous laybys shall not receive precautionary treatment. However, where ice is present and following snowfall the non-contiguous laybys shall be cleared once the carriageway is cleared of snow.

Route	Location
A9000	Forth Road Bridge
M90	Queensferry Crossing
A985	Kincardine Bridge
A876	Clackmannanshire Bridge

### **Figure 6: Potassium Acetate Treatment Locations**

Potassium acetate treatment shall be applied at the locations specified in Figure 6 above including those parts of the Trunk Road 400 metres beyond the limits of each of the Forth Road Bridge and the Queensferry Crossing and 200 metres beyond the limits of each other bridge.

Footways/cycleways on the above bridges will also be treated with potassium acetate.

Precautionary treatment using potassium acetate will be spread at a rate as determined in Appendix WSP18 Decision Matrix for Winter Service.

- (ii) Should for whatever reason the normal access to a route be blocked, this route will be accessed from an alternative depot as per Route Cards.
- (iii) Precautionary treatment routes will be operated from Rosyth, Burghmuir, Bonnyrigg, Chryston and Charlesfield depots. Table 6.1.5 in Appendix 21 provides operational de-icing material stock levels.
- (iv) There are presently no designated cycling facilities within urban areas contained within the network area. Any cycleways that are designated as Category A are detailed in Appendix WSP2.

Footways previously designated as Category B and C in the 4G Contract have now been re-categorised at Category A. As such they will receive precautionary brine treatment when the temperature is forecast to fall to 1°C. Footways previously designated as Category D in the 4G Contract have now been re-categorised as Category B. Works on Category B footways shall be undertaken as instructed by the Director. The brine tank on the footway tractors will be supplemented by additional brine storage carried on the towing vehicle.

Treatment to all Category A footways, footpaths and cycle facilities will be undertaken in accordance Schedule 2 Section 6.3.13 and Table 6.10.3 of Schedule 2 Appendix 6 Section 6.10 as detailed in Appendix WSP2 Footway Treatment Routes and Maps and completed by 0600 hours each morning as per Schedule 2 Appendix 6 Table 6.10.1.

Category A precautionary treatments for footways, footpaths and cycle facilities shall be treated with brine at 20 ml/m<sup>2</sup>. Treatments on all other footways will be instructed by the Director.

All other footways are designated as Category B. Plans are currently being developed to enable treatment to undertaken when required.

**8.1.2** As 8.1 (iv) above

## **Item 9 - Snow and Ice Clearance**

### **9.1 Snow Clearing**

Using the 2-5 Day Forecast the WSDO and SWM will consider the need for additional labour and plant to be mobilised to deal with snow.

In advance of an accumulating snow forecast precautionary treatments will be at 40 g/m<sup>2</sup>. During snow clearance using ploughs salt will be spread at 40 g/m<sup>2</sup>. When the forecaster predicts any snow

accumulations in a vulnerable location that includes a gradient the Operating Company shall mobilise frontline and reserve winter service plant on to routes in advance of snow fall as per Schedule 2 Section 6.2.31 no later than one hour before forecast snowfall.

To comply with Schedule 2 Section 6.3.25 snow plough blades will have ceramic inserts. This will allow the plough blades to be in full contact with the carriageway surface ensuring full removal of snow. To prevent damage to the carriageway or the plough blades, the ploughs will be operated on a hydraulic float mechanism.

### 9.1.1 Arrangements for Managing Snowfall

Ploughing routes are based on the 40 g/m<sup>2</sup> treatment routes Appendix WSP1 (Table 6.1.3) focussing on keeping at least one lane open. When applicable the clearance procedure for dual carriageways and motorways will be echelon ploughing. There are ploughing techniques detailed for general road surfaces, the Queensferry Crossing and the Forth Road Bridge. See WSP22 Snow and Ice Clearance Procedures.

When there is a Unit-wide forecast of 5 cm or more of snowfall all available frontline, patrol, reserve and additional winter service plant will be deployed. Where the forecast only affects part of the network appropriate resources will be deployed. See WSP20

When instructed by the Director the Operating Company/DBFO Snow Plan will be implemented including:

- M6 DBFO 1 spreader to patrol, heavy recovery vehicle, self-help salt pile;
- M80 DBFO 1 spreader to treat and plough, Fastrac patrol, Unimog (TS supplied);
- M8 – Fastracs, extension of existing routes, recovery vehicles

The Snow Plan can be found using this link - <https://www.transport.gov.scot/our-approach/keep-scotland-moving/winter-service/#42965>

Details of snow blowers, loading shovels, de-icing vehicles fitted with plough blades and other winter service plant provided directly by BEAR Scotland and through supply chain arrangements can be found in Appendix WSP15.

Where hard packed snow and ice not exceeding 20mm thick has formed, and the air temperature is above minus 5°C, removal will be achieved by successive spreading of de-icing material. Below minus 5°C or where the snow or ice is more than 20mm thick great care will be taken as the use of de-icing material alone can result in an uneven and slippery surface. A single sized abrasive aggregate of particle size of 6mm, or 5mm sharp sand and having low fines content will be added to the de-icing material on a 1:1 ratio. Reversion to the use of de-icing material only will be made as soon as possible. Abrasive aggregates will be considered as a supplement in urban areas where de-icing material alone would provide an unacceptably slippery surface.

During prolonged periods of snowfall at locations where the use of salt for de-icing is prohibited such as bridge decks, ploughing will be continuous followed by repeated applications of Potassium Acetate. If snow becomes hard packed consideration will be given to applying 5mm sharp sand to aid traction while snow clearing operations are being carried out.

In extreme conditions, such as when temperatures drop below levels at which sodium chloride is ineffective, the Operating Company will use alternative de-icing materials (e.g. Magnesium Chloride). See 4.2.5 above.

Should hard packed snow or ice be present consideration will be given to deploying additional measures such as using a Raiko ice breaker and/or using the alternative de-icing agent Magnesium Chloride.

During snow clearing operations all Winter Service Plant shall be driven in a manner appropriate to the prevailing weather conditions.

Appendix WSP18 Decision Matrix for Winter Service provides Contractual target timescales for snow clearance.

### **9.1.2 Road Closure Procedure Including the Use of Snow Gates**

Any decision to close a road will normally be taken by Police Scotland. Only one section of road within the South East Unit has snow gates which is A68 at Soutra.

The WSDO, the Director and Traffic Scotland will be informed immediately by telephone, and in writing within 12 hours, of any decision to close a road, or of other major problems encountered within the Unit due to winter weather conditions.

Police Scotland will normally notify the other Emergency Services of road closures and the WSDO/ILO will notify the local Roads Authorities of any relevant trunk road closures.

The WSDO/ILO will liaise with and co-operate with Police Scotland to control the snow gates, if applicable, until a search of the road between the gates has been undertaken to ensure that no vehicles or pedestrians are trapped.

Once it has been ascertained that no-one has been trapped between the snow gates, the gates will be secured and all BEAR Scotland personnel withdrawn except those involved in the clearance of snow.

When it is considered safe, Police Scotland will request BEAR Scotland assistance to open the gates. The WSDO/ILO shall immediately inform Traffic Scotland and the Director of the reopening of the road. A written report will be submitted to the Director within 12 hours (or if outside of normal working hours then the morning of the next working day) of Police Scotland instructing the road closure.

Padlocks for each gate will be operated by number code with details held at the Network Hub and provided to Police Scotland.

In certain situations (e.g. Amber/Red Met Office snowfall warnings) and following discussions with Police Scotland it may be necessary to have plans in place to restrict access to parts of the network. In order to achieve this pre-deployment of signs and cones to specific locations would be necessary based on the level of warning and forecast.

In exceptionally severe conditions, such as blizzards, resulting in reduced visibility and deep drifting snow the SWM may decide that it is unsafe for operational staff to continue to clear snow or ice and operations may have to be suspended until conditions improve. Such occurrences are likely to be extremely rare and the SWM would consult with the Police, the Director, the expert forecaster and Traffic Scotland prior to making such a decision.

### 9.1.3 Prolonged Snowfall Strategy

During prolonged periods of snowfall, ploughing will be continuous to prevent a build-up of snow and compaction by traffic until the road is clear and snow fall has stopped. Reserve and additional winter service plant will be used to supplement frontline winter service plant in snow conditions, when required.

When planning and carrying out snow clearance, BEAR Scotland will pay attention to the layout of the carriageway in terms of the overall number of lanes and the location of entrance and exit slip lanes. Snow clearance of slip roads will be co-ordinated with main carriageway clearance, and a clear path kept open between those entry and exit points where frequent lane changes are necessary.

Clearance of snow from contiguous and remote laybys will be carried out once the main carriageway, junction areas and crossovers have been cleared of snow.

At roadworks, traffic management equipment must not be disrupted. An accumulation of ploughed snow creating a ramp adjacent to safety fences and concrete barriers will be avoided.

Where snow ploughing is not possible, for example:

- in exceptional circumstances when the snow on the road is deep and cannot be removed by conventional ploughing
- when de-icing treatment over packed snow is likely to provide an unacceptable surface,
- when the traffic is insufficient to disperse the snow

BEAR Scotland will lift, remove and dispose of snow and ice and/or utilise snow blowers, with the snow being directed onto adjacent land (where BEAR Scotland has obtained the prior agreement of the landowner and the Scottish Environmental Protection Agency). Such operations will be followed by de-icing treatment. Snowblowers will comply with the requirements of Schedule 2 Section 6.5.14 and Section 6.5.15.

When snowploughing or snow blowing operations are undertaken care will be taken that snow does not build up across:

- railway tracks or against gates
- bridges
- parapets
- fences and safety fences
- walls and other boundaries

Speeds of ploughing vehicles will be regulated, particularly at features such as underbridges where snow could be thrown over the bridge parapet, and adjacent to the central reserve where snow could be pushed into the opposing carriageway. When ploughing snow, other vehicles will not be overtaken unless stationary.

**9.1.4** De-icing and spread rates for snow and ice clearance of carriageways are detailed in Appendix WSP18 Decision Matrix for Winter Service

**9.1.5** When ploughing wide single carriageway roads to remove snow accumulations from the two-lane section of three lane sections of road, the priority will be to keep lane 2 open to traffic, and the procedure will be to plough snow from lane 2 into lane 1 initially. Once lane 2 is free of snow, all

resources will concentrate on lane 1, ploughing snow towards the carriageway channel. This particularly applies to WS 2+1 roads and roads with crawler lanes.

**9.1.6** Resources shall be deployed to ensure that footways, footbridges & cycle facilities are cleared of snow and ice in accordance with Schedule 2 Appendix 6 Table 6.10.2. Snow Clearance Operations on Category A Footways as detailed in Schedule 2 Appendix 6 Table 6.10.3 will be undertaken between 0600 hours and 1900 hours. Footways should be cleared of snow within 2 hours of snowfall ceasing. Footway tractors will have data loggers to record material spread rates and locations. Any areas spread from a backpack will be detailed in a daily work record. All Forth Road Bridge service roads, footways, footpaths and cycle facilities which require precautionary treatments and snow clearance are detailed in Route Cards.

**9.2** Maps showing details of the footways, footbridges and cycle facilities are detailed in Appendix WSP2 Footway Routes

During snowfall additional resources will supplement precautionary treatment routes resources to meet Contractual requirements in accordance with Schedule 2 Appendix 6.10.3. Where necessary supply chain partners will be deployed. These resources will utilise small tractors with ploughs, small footway snow blowers, walk behind pedestrian ploughs and mini excavators.

We will encourage community self-help during winter conditions through engagement with local community councils for Category B footways. Where there is a willingness to get involved, we will propose providing them with self-help kits of backpack brine sprayers, intermediate bulk containers of brine, hand-push salt spreaders, salt stocks, snow shovels and personal protective clothing. Training and induction in safe working methods will be provided to all volunteers.

## **Item 10 – Freezing Rain/Rain Falling on Extremely Cold Surfaces**

### **10.1 Advance Planning**

The prediction of freezing rain is difficult and the action necessary to deal with it is problematic. The very nature of freezing rain means that treatments will have virtually no effect initially and ice will form on the carriageway. Considering the limits in the effectiveness of treatments in dealing with freezing rain it is essential that practical measures are implemented to provide warning to road users of the hazardous conditions. Measures for dealing with Freezing Rain fall into three main areas: Advance Planning, Operational Arrangements and Hazard Mitigation.

These measures are considered in further detail as follows:

#### **10.1.1 Advance Planning for Freezing Rain / Rain Falling on Extremely Cold Surfaces**

- (i)** Advance planning includes consideration of the potential impact of freezing rain and development of contingency arrangements to mitigate the effects. These contingency arrangements are documented below.
  - If freezing rain occurs during a forecasted period of severe weather that necessitates a Yellow or Amber Met Office Severe Weather Warning the MART may be activated.
  - Any Police Scotland response to freezing rain would be part of a multi-agency operation and

would be subject to other ongoing operational commitments.

- Advance signing of the forecast of freezing rain may be signed on the Traffic Scotland national network of VMS, with an appropriate legend such as:

**FREEZING RAIN  
FORECAST  
PLAN AHEAD**

- The use of social media platforms, at a strategic level, can also be used to provide advanced warning of the forecast conditions and what the general public should expect should such weather conditions prevail.

Specific measures which BEAR will take are as follows:

- Outline operational arrangements for carrying out Precautionary Treatments are documented within this WSP under Appendix WSP1. 40g/m<sup>2</sup> Precautionary Treatment Routes will be utilized.
- Although the adverse effects of freezing rain can impact across any part of the network, particular consideration will be given to those parts identified as Vulnerable Locations in Appendix WSP12
- On receipt of a forecast of freezing rain or rain falling on extremely cold surfaces, a conference call will be initiated with the Director (Transport Scotland), Traffic Scotland, Police Scotland and appropriate Local Authorities and service providers in the affected area.

Topics for discussion should include:

- Forecast and expected timings
- Extent of routes affected
- BEAR Scotland Plant & Police Scotland Resources
- Police travel / no travel advice
- Advance VMS warnings
- Social Media / Media Release

## **(ii) Risk Assessments**

Freezing rain will require to be treated in a similar manner to snow. Refer to risk assessment and method statements for snow clearance available in BEARNet.

### **10.2.1 Operational Arrangements**

- (i)** As above freezing rain will have to be treated in a similar manner to snow i.e. treatment in advance of, during the event and then treatment following as required.

Freezing rain usually occurs along the line of an incoming warm front. To ensure maximum effectiveness of the salt, the advance treatment should be made in the same direction and

immediately in advance of the weather front. The weather radar, provided by MetDesk, will be used by the WSDO to determine the timing of the treatment and where practicable, the direction of treatment.

Consideration will be given to stationing vehicles at the point on the route where the weather front will first hit in order that timely treatments can be undertaken.

- (ii) Salt will inevitably be lost during and following treatment, therefore constant monitoring will be required. Successive treatments will be required during rainfall and continued until such time that the rain has ceased, or the temperature of the road has risen above freezing.

It is likely the first confirmed instances of freezing rain will either be from the winter drivers patrolling during the event, from members of the public or Police Scotland.

### 10.3.1 Hazard Mitigation

- (i) The very nature of freezing rain means that treatments will have virtually no effect initially and ice will form on the carriageway. Mitigation of the hazard is therefore a significant aspect of the actions taken in response to freezing rain or rain falling on extremely cold surfaces.

The main action is to inform road users of the hazard, however more pro-active measures may be required.

The national network of VMS operated by Traffic Scotland should be used to warn road users of the hazard.

TRISS units may be deployed to provide localised warnings utilising the vehicle mounted VMS.

- (ii) Consideration should be given to closing the road as the rain arrives and holding traffic (rather than diverting) until such times as it is deemed safe to proceed.

Consideration could be given to the use of rolling blocks and convoy arrangements to either hold or slow traffic down both just prior to and during the event. Again, this will require resources from Police Scotland as only they have the legal authority to control traffic in this manner and would be subject to ongoing operational commitments.

In addition to the arrangements made in respect of advance planning, operational procedures and hazard mitigation, it will be necessary to consider the arrangements to be implemented should incidents occur as a result of the freezing rain.

These should follow existing procedures set out in the Disruption Risk Management Plan for the management of Major and Critical Incidents.

## Item 11 - De-icing Materials

### 11.1 Details

De-icing materials will primarily comprise rock salt and potassium acetate. In extreme conditions, such as when temperatures drop below levels at which rock salt is effective, BEAR Scotland will consider the use of alternative de-icing materials such as magnesium chloride. See 4.2.6 above.

**11.1.1 (i) Specification**

Potassium acetate used for de-icing operations will comply with the AMS 1435D: Liquid Runway De-icing/Anti-icing Product .

Salt for de-icing will be 6.3mm grading particle size complying with BS3247 and treated with an anti-caking agent. Marine salt for brine production will also comply BS3247. No arisings are anticipated from this marine salt but should arisings exist they will be treated as waste and not added to the stock pile.

For pre-wetting salt, the percentage of salt brine added to salt for spreading Operations will be 30% of the total weight of spread material, and the saturated salt in the brine solution before combination will be 23%.

Brine will be produced and stored in purpose-built salt saturators sited at Rosyth, Burghmuir, Bonnyrigg, Chryston and Charlesfield depots. These saturators will automatically produce and store brine of the correct concentration and transfer it to saddle tanks located on the spreaders by means of an integrated pump. Digital read outs are fitted to brine production facilities, with remote access to those read outs and an alarm for notification of loss of production or out of specification production. Remote access will be arranged for the Director and PAG, where requested. In addition, daily checking of brine concentration in the saturators will be carried out by Depot Supervisors by means of a refractometer, and records held at the depot. The saturators will be serviced on an annual basis through a service contract with the manufacturer. The water pipes to the saturators will be frost protected to ensure they can operate in extreme temperatures.

Where air temperatures are forecast to fall below MINUS 15° Celsius the brine will be diluted by an additional 5 to 10% of water to prevent recrystallisation. Ensuring that that the solution is well mixed.

Typical analysis from our salt suppliers are shown in Figures 7 and 8.

Chemical Analysis	BS3247	SSC typical
	Percent	percent
Total Chlorides expressed as NaCl	90.0 minimum	91.0
Insolubles	7.0 maximum	6.5
CaSO <sub>4</sub>	2.5 maximum	2.5
H <sub>2</sub> O	4.0 maximum	
Particle size distribution	BS3247	SSC typical
Mesh size (mm)	% retained	% retained
+6.30	0	0
+5.60		0
+2.36	20 – 70	30
+1.18		0
+0.30	80 minimum	87
Reagent Addition		Typical (ppm)
Anti-caking agent		80ppm

**Figure 7: Typical Specification for Dry Salt Supplied by Cleveland Potash**

Chemical Analysis		BS3247	PS typical
		Percent	percent
Total Chlorides expressed as NaCl		90.0 minimum	98.5
Insolubles		7.0 maximum	0.5
CaSO <sub>4</sub>		2.5 maximum	1.0
H <sub>2</sub> O		4.0 maximum	1.0
Particle size distribution	BS3247	PS typical

+0.30	80 minimum	90	
Reagent Addition		Typical (ppm)	
Anti-caking agent		30ppm	

**Figure 8: Typical Specification for Brining Salt Supplied by Peacock Salt**

**(ii) Storage**

BEAR Scotland will undertake environmental risk assessments of all depots to identify measures necessary to ensure that SEPA guidelines and requirements are adhered to. Materials will be stored within a covered structure or within bulk containers and in accordance with current planning, environmental regulations and as per Schedule 2 Appendix 6 Section 6.13.1 ‘Specification for Salt Storage Facility’.

As de-icing salt is removed from storage areas, a positive slope will be maintained to avoid danger to operatives and winter service plant from the collapse of stockpile cliff walls. BEAR Scotland will ensure that de-icing material stockpiles are managed and safeguarded effectively and those stockpiles do not become contaminated with foreign matter likely to cause damage to winter service plant and affect other trunk road users, by storing all salt on either a concrete or bituminous base.

**(iii) Testing Methods**

Salt shall be tested in accordance with BEAR Scotland Procedure 093 – Winter service salt testing, to ensure that the salt complies with BS3247.

To ensure that BEAR Scotland does not receive salt which does not comply with BS3247, all our salt suppliers will be ISO9001 accredited. Should a supplier deliver de-icing salt which is non-compliant, the following procedure will be implemented:

- The supplier will be notified as soon as possible
- The severity and type of failure will be analysed
- If the failure can be rectified (i.e. moisture content) then a solution will be sought with the supplier
- If the failure cannot be corrected, arrangements will be made with the supplier to deliver further supplies of de-icing salt and remove the supplies which failed.

Salt stored in depots found, through monthly testing, to be non-compliant with BS3247, will be quarantined in a separate stockpile and will not be used for treating the Unit.

#### **(iv) Suppliers**

BEAR Scotland has developed arrangements with national de-icing material suppliers:

- Cleveland Potash Ltd. Boulby Mine, Loftus, Saltburn-by-the-Sea Cleveland, TS13 4UZ
- Peacock Salt, Jura Terminal, North Harbour, Ayr, KA8 8AE
- OMEX Environmental Ltd, Bardney Airfield, Tupholme, Lincoln LN3 5TP
- Safecote Ltd, Winnington Hall, Northwich, Cheshire, CW8 4DU

#### **(v) Importers**

All suppliers are currently within the United Kingdom.

#### **(vi) Stock Levels**

A table of salt stock levels is included in Appendix WSP21 De-icing Materials - stock levels for all de-icing material by depot.

During the winter period, salt stock monitoring reports will be made to the Director using the salt reporting system portal at <https://cms.traffic-scotland.co.uk/> as per Schedule 2 Section 6.1.18 (a) and (b). An explanation of how the number of resilience days at each depot will be calculated and reported is included in Appendix WSP26 Salt Resilience Days per Depot.

When requested by the Director, daily salt monitoring reports will be provided within 4 hours of receipt of the request.

#### **(vii) Restocking and Monitoring**

BEAR Scotland shall provide the minimum operational salt stock levels at the start of the Winter Service Period as per Schedule 2 Appendix 6 and as detailed in Appendix WSP21 De-icing Material Stock. If salt stocks have reduced to 90 percent on 21 December in any Winter Service Period, the Operating Company shall restock to 100 percent of the full pre-season stocks.

Salt stocks will be continuously monitored and managed. During the winter period, a detailed daily return of salt used will be entered into Vaisala RoadDSS Managers Salt Management system by the WSDOs/ILOs and salt deliveries will be entered into the system by the SWM. During snow conditions a daily report of salt usage will be submitted. This continuous monitoring will ensure salt stocks are replenished timeously. Salt stocks will be surveyed 7 days before the start of each winter service period and 5 working days before the 7 December by an independent specialist surveyor. A copy of the survey report including calculations will be provided to the Director no later than one day after receipt.

The procurement of salt will be on a call-off basis and triggered by minimum stock levels at each depot. The SWM is responsible for the ordering of salt.

Alternative de-icing materials (Magnesium Chloride) will be restocked to 50,000 litres when the stock level has fallen to 30,000 litres. Restocking to be within 7 days as per Schedule 6 Clause 6.4.20.

**11.1.2** The cumulative minimum salt stock level at the beginning of the season is 19,000 tonnes in Year 1 of the NMC as previously agreed with Transport Scotland. However, it is intended capacity for the 2020/21 season will be 21,500 tonnes. Appendix WSP21 De-icing Materials - stock levels for all de-icing material by depot.

## **Item 12 – Strategic Salt Stocks**

As ordered by the Director, BEAR Scotland will procure, transfer and store strategic salt as required.

## **Item 13 – Winter Service Plant**

**13.1.1** In accordance with Schedule 2 Appendix 6 Winter Service Attachment 6.1 Appendices for Winter Service Plan:

### **13.1.2 Winter Service Plant**

All winter plant is detailed in Appendix WSP15 as per Schedule 2 Appendix 6 Section 6.5.19

- (i) (Table 6.1.6) Patrol Vehicles  
(Table 6.1.7) Frontline Vehicles  
(Table 6.1.8) Frontline Footway Plant  
(Table 6.1.9) Reserve Vehicles - 1 Reserve Vehicle is provided for every 3 Front line Vehicles as detailed in (Tables 6.1.7 and 6.1.8)
- (ii) (Table 6.1.10) Additional Winter Plant
- (iii) Loading Winter Service Plant - 5 loading shovels will be permanently available within the Unit, 1 at each of the following depots: Rosyth, Burghmuir, Bonnyrigg, Chryston and Charlesfield

An electronic register will be maintained within BEARnet containing details of the operational status of the winter fleet and loading plant. This register will be used to provide daily operational updates as per Schedule 2 Section 6.1.18 (e).

In the event of a breakdown of frontline winter service plant the cause, time and location will be recorded in the Vaisala Manager diary facility within 1 hour of the breakdown occurring. Where practical the vehicle will be returned to the nearest depot and a replacement vehicle mobilised.

## **13.2 Calibration of Winter Service Plant**

**13.2.1** In September and January of each Annual Period, the Operating Company shall calibrate all equipment for spreading de-icing material:

- in accordance with the requirements of BS1622, or

- where BS1622 does not provide for the calibration of any de-icing spreading equipment, in a manner proposed in writing by the Operating Company and consented to in writing by the Director. As a minimum the Operating Company shall provide details of the Winter Service Plant supplier's calibration method to the Director, and
- in accordance with the requirements of the specific material being used
- September testing shall comply with the requirements of tests 'A' and 'B' and January testing shall comply with the requirements of test 'B' of BS1622.
- Re-calibration and testing shall be carried out after repairs to the spreading equipment and at other times when necessary to ensure the accuracy of de-icing material spreading.

### 13.2.2

- All calibration and re-calibration shall be independently carried out and certified. Calibration certificates shall be held in the Operating Company's Management System.
- Calibration of spreaders will be carried out in accordance with the National Winter Service Research Group document 'Best Practice Guidance for Spreading Salt'.
- All calibrations will be carried out in BEAR Scotland depots. The certification for these independent calibrations will be held in the Central Office, in accordance with our documented Quality Management System. Copies of the calibration certificates will be held in the relevant depot for the vehicle. Calibration Certificates will be available for inspection by the Director and the Performance Audit Group at any time.

## Item 14 – Compounds, Depots and Facilities

**14.1** A schedule of compounds, depots and facilities covering the network within the South East Unit is included in Appendix WSP17.

## Item 15 – Maps, Drawings and Graphical Information

### 15.1 Maps

- (i) Precautionary treatment routes including summary table of routes, route card and route map (20 g/m<sup>2</sup> and 40 g/m<sup>2</sup>) – see Appendix WSP1
- (ii) Precautionary treatment routes for footways, footbridges and cycleways including summary table of routes, list of all Category A footways, detailed treatment location map – see Appendix WSP2
- (iii) Reactive treatment routes for footways, footbridges and cycleways – See (ii) above
- (iv) Winter Service Patrols Routes Category A and B – summary table of routes, map of Unit showing all routes - see Appendix WSP3
- (v) Ploughing Routes – as per 40g/m<sup>2</sup> routes in (i) above.
- (vi) Weather Stations – see Appendix WSP4
- (vii) Snow Gates – see Appendix WSP5
- (viii) Snow Fences – see Appendix WSP6
- (ix) Shelter Belts – not applicable
- (x) Snow Poles – not applicable

- (xi) Snow and Ice Folding Message Signs – see Appendix WSP7
- (xii) Salt Bins – see Appendix WSP8
- (xiii) Vertical Concrete Barriers – see Appendix WSP9
- (xiv) Other Facilities – not applicable
- (xv) Where Route Based Forecasting is not used, Climatic Domains and the Sensors Used to Generate Domain Forecasts – see Appendix WSP10

## Item 16 – Compiling and Maintaining Records

Records of decisions, amendments to decisions, actions taken and patrol communications will all be maintained on electronic logs in the Network Hub. It is the responsibility of the WSDO to ensure all winter records (electronic and 'hard' copies) are collated and maintained.

On completion of a precautionary treatment the weight of de-icing material used is input to Vaisala Manager and checked against the route target tonnage spreadsheet (See Appendix WSP23). Should it be below the minimum target tonnage of 90 % of the target route tonnage the WSDO decides what action to take. Any decisions taken will be recorded within Vaisala Manager.

The vehicle data logs will be interrogated for effectiveness and efficiency of the operations. A daily report on the preceding days winter maintenance operations will be submitted to the SWM for perusal and action where required. In addition, records as detailed in Schedule 2 Appendix 6 will be held in appropriate electronic logs.

The following table identifies typical records required and where they will be held electronically:

Annex 7.2H – Records required	Currently held in
Summary Forecast and Actual Weather data	Vaisala Manager
Decisions taken, when and by whom	Vaisala Manager
Planned and actual treatment Records	Vaisala Manager
Planned and actual response times achieved	Vaisala Manager
Planned and actual commencement times	Vaisala Manager
Planned and actual Route times	Vaisala Manager
Planned and actual spread rates	Vaisala Manager
Observations and actions taken by the Winter Service Patrols	Vaisala Manager / BEAR Call log
Loading point de-icing stocks and replenishment orders	Vaisala Manager
Weight and volumes as appropriate for the amount of de-icing material spread on each Route for each treatment.	Vaisala Manager
Actual salt stocks held including strategic salt stocks	Vaisala Manager
Number of treatment days (capability) of de-icing material available for each depot based on six treatments per route per day at 20 g/m <sup>2</sup>	Vaisala Manager
Ice prediction system Records	Vaisala Manager
Output from Winter Service Plant on-board data loggers to Schedule 5 Clause 2803AR	Locatu
Plough usage	Locatu
Winter Service Plant down time and software faults	Locatu / BEAR Fleet Defect Reporting
Winter Service Plant Deployment Records (including vehicle location Records) and driver and operator logs	Locatu
Log (both manual and electronic) for telephone, email and two-way communication calls	BEAR CMS log
Complaints by members of the public and Trunk Road users	TRCC & BEAR CMS log
Accidents during winter conditions	BEAR CMS log

Road closures due to weather conditions	BEAR CMS log
Pre- and mid-season road sensor calibration systems	BEARnet
Winter Service Plant Calibration Certificates	BEARnet
Weather Forecast Accuracy	BEARnet
Any other relevant information	BEARnet

**Figure 9**

A shared area shall be set up on the BEAR Scotland central computer server where appropriate files not stored on Vaisala Manager and Locatu to which Transport Scotland and Performance Audit Group require access will be stored. These files shall be updated on a regular basis to ensure that the data stored is as up to date as possible. The remote access for all files stored on the shared area shall be read only access to ensure the integrity of files.

Transport Scotland, Traffic Scotland and PAG shall have read access to the Vaisala Manager system which includes all ice sensor data such as road surface temperature, road surface state and camera images etc. The system can be used to generate various reports in relation to treatments, salt usage etc.

All telephone calls to and from the Network Hub shall be recorded and stored on the BEAR Scotland computer system which can be accessed if required.

The daily winter action plan shall be uploaded to the Traffic Scotland website daily by 15:00 hours.

### **Item 17 – Snow Pole Location Map**

There are no snow poles in the South East Unit.

### **Item 18 - Snow Gates**

**18.1 Maintenance, Liaison and Operation** Prior to the commencement of the winter service period the snow gates shall be inspected to ensure they are functional and of effective appearance throughout the winter service period.

### **Item 19 - Variable Message Snow and Ice Folding Message Signs**

**19.1** BEAR Scotland will open snow and ice folding message signs as shown in Appendix WSP7 prior to 1 October each year to check their functionality. Any maintenance work required will be carried out. Thereafter signs will be used as required to provide information to the road user regarding weather and road conditions.

### **Item 20 – Salt Bins**

Salt bins will be strategically positioned to assist in the carrying out of footway treatments by 30 September each year. Locations are detailed in Appendix WSP8 Locations of Winter Service Infrastructure.

Any missing or damaged salt bin will be replaced within 48 hours of the defect being known.

At the end of each winter seasons the salt bins will be returned to depots, cleaned and any maintenance required undertaken.

Given the changes in the NMC and the increased level of Category A precautionary footway treatments the number and location of salt bins will be reviewed after the first winter season.

## **20.1 Stock Level Monitoring and Replenishment Procedures**

Salt level monitoring will be undertaken by the safety inspectors and the operational staff carrying out precautionary footway treatments. Replenishment will be undertaken as required.

## **Item 21 – Salt Measurement Apparatus**

### **21.1 Equipment and locations and recording methods**

At our depots in Rosyth, Burghmuir, Bonnyrigg, Chryston and Charlesfield weighbridges are installed in order to accurately record the quantities of salt being used.

Spreaders will be weighed at the start and end of each treatment. These weights will be phoned through to the Network Hub and recorded. Should usage be 10% below the targeted weight for the precautionary treatment of the route then a retreatment of the entire route will be undertaken unless the forecast or actual hazard for ice or snow has passed.

These facilities will provide weighbridge tickets which will be held with the Winter Drivers Record; the facilities proposed will also be calibrated in accordance with manufacturer's instructions in September and January each year and records maintained in the BEAR Scotland Management System.

Each depot will have brine manufacture and storage facilities capable of holding sufficient brine that would allow treatment of all routes simultaneously from that depot at maximum spread rates plus an additional 20 per cent above the minimum to be held in reserve. See Appendix WSP21 De-icing Material Stock - Brine Production and Storage.

The brine tanks produce and maintain a concentration level of 23% which can be checked on a digital read-out. Daily checks will be carried out using a refractometer (saturation meter) and records held in the BEAR Scotland Management System.

**Appendix WSP1 – Precautionary Treatment Routes 20 g/m<sup>2</sup> and 40 g/m<sup>2</sup>**

**Summary of 20 g/m<sup>2</sup> Treatment Routes**

Route No.	Depot	Description	Depot to Route (km)	Time to Route (mins)	Total Route Length (km)	Total Route Length Treated (km)	Aver Speed (km/hr)	Route Time (mins)	Route to Depot (km)	Route Efficiency	Average Width of Route	Alternative Access	Route Tonnage @20g/m <sup>2</sup> (tonne)	Route Tonnage @40g/m <sup>2</sup> (tonne)	Treatment type

B = 90.9 km – Distance from 2. start of route to 3. end of route (km) – (i.e including any dead time from start to end of route for junctions etc hence optimisation)

C = 38.3 km – Total Distance treated from 2. start of route to 3. end of route (km)

D = 50.9 km – Distance from 3. end of route to 1. depot

E (Efficiency of Route) =  $(100 / (A + B + D)) \times C = (100 / 177.5) \times 38.3 = 22\%$

**Alternative Access:** In the event of any blockage on the trunk road network that would require alternative access the frontline vehicle will treat to the point of the blockage and then use the local road network to reach the remainder of the route. A vehicle will be provided from the Bonnyrigg or Charlesfield depots by utilising the trunk road and local road network should access be required from an alternative depot.

<b>Route to Depot:</b>	15.0 km	<b>Route Average Width:</b>	10.3 m
<b>Route to Depot:</b>	15.0 mins	<b>Route Average Speed:</b>	68 km/h

- A = 15.0 km – Distance from 1. depot to 2. start of route (km) - (i.e dead time)
- B = 71.4 km – Distance from 2. start of route to 3. end of route (km) – (i.e including any dead time from start to end of route for junctions etc hence optimisation)
- C = 31.7 km – Total Distance treated from 2. start of route to 3. end of route (km)
- D = 15.0 km – Distance from 3. end of route to 1. depot
- E (Efficiency of Route) =  $(100 / (A + B + D)) \times C = (100 / 101.4) \times 31.7 = 31\%$

Alternative Access: In the event of any blockage on the trunk road network that would require alternative access the frontline vehicle will treat to the point of the blockage and then use the local road network to reach the remainder of the route. A vehicle will be provided from the Burghmuir depot by utilising the trunk road and local road network should access be required from an alternative depot.

Forecasting Road Weather Stations are shown in **bold**.

**Appendix WSP4 – Location of Weather Stations and Cameras (Map)**

**Legend**

**SE Weather Stations**

- Forecast site
- Forecast and Camera
- Standard site with Camera
- Standard site
- ▲ Wind Only site

## Appendix WSP5 – Location of Winter Service Infrastructure – Snow Gates

There is one set of snow gates on the network on either side of Soutra Hill. The map below shows the location

- Soutra Hill – at Soutra Mains Cottage
- Soutra Hill – North of Oxton Junction

## Appendix WSP6 – Location of Winter Service Infrastructure – Snow Fences

Snow fencing has been installed on only one section of the network - A68 at Soutra. The map below identifies the fences in red. These will be inspected prior to 1 October and any maintenance work carried out. The fences will also be inspected following significant snow events for maintenance purposes and to consider if additional fencing is required.

## Appendix WSP7 – Location of Winter Service Infrastructure – Snow and Ice Folding Message Signs

Road	Location	Detailed description of location
A7	South of Teviothead	At end of widened carriageway
A7	Hawick	Buccleuch Street
A7	Hawick	Burn Foot
A7	Galashiels Kingsknowes Roundabout	Facing west on Eastbound approach
A7	Selkirk Ladylands	Laylands Junction with A699
A7	Hawick	Junction with B6359
A689	Cleekim	Junction with A68 / A689 facing West
A68	Cleekim	50m North of A68 / A689 facing North
A68	Cleekim	Junction with A68 / A689 facing North
A68	Soutra Hill	Northbound Snow gates
A68	Soutra Hill	Southbound Snow gates
A68	Edgerton	Southbound layby
A68	Jedburgh	Oxnam road end, Abbey Bridge
A68	Jedburgh	Bonjedward southern end of triangle (A68) Northbound
A68	Jedburgh	Bonjedward southern end of triangle (A68) Southbound
A68	St Boswells	A68 / A699 crossroads
A68	Carfraemill	Southbound at roundabout
A68	Lauder	A68 / A697 at High Cross
A702	Dolphinton	Southbound between layby and 40 mph sign
A702	Dolphinton	Northbound between layby and 40 mph sign
A702	Carlops	Northbound at 30mph sign on southside
A702	Carlops	Southbound at 30mph sign on southside

## **Appendix WSP8 – Location of Winter Service Infrastructure – Salt Bins**

A number of salt bins are required on the network and we intend to continue using existing locations at present. This will be updated and reviewed at the end of each winter season.

These will be stocked by 30 September each year and stock levels monitored and replenished as required throughout the period. At the end of each winter season salt bins will be taken back to depots and stored.

### Salt Bins

A68 at junction with Frostineb Road  
A68 outside Primary School, Pathhead  
A68 Pathhead Medical Centre  
A68 near Hundalee  
A702 at Lothianburn Golf Club  
A702 at Wallstone near A766 junction  
A702 at Braidwood  
A702 at Castlelaw Road  
A702 outside No. 2 Biggar Road, Silverburn  
A702 at junction with UC95, Ninemileburn  
A702 at Beechwood Tea Rooms, Dolphinton  
A702 at Townfoot, Coulter  
A702 at Birthwood Road, Coulter  
A702 at Lamington crossroads  
A702 at Clanalba House, Lamington  
A702 at Post Office, Lamington  
North side of Forth Road Bridge (see map below) – one NB, one SB  
South side of Forth Road Bridge (see map below) – 13 No.

### Self Help Salt Bins

A702 Carlops - One at North end, one at car park  
A68 Earlston - Two on main road  
A7 Newmill – Two on main road

### Salt Heaps

A68 Huntsford Bends, North of Carter Bar  
A7 Bigwood 1 mile south of Selkirk

Salt Bin Locations (North side of Forth Road Bridge)

Salt Bin Locations (South side of Forth Road Bridge)

## Appendix WSP9 – Location of Winter Service Infrastructure – Vertical Concrete Barriers

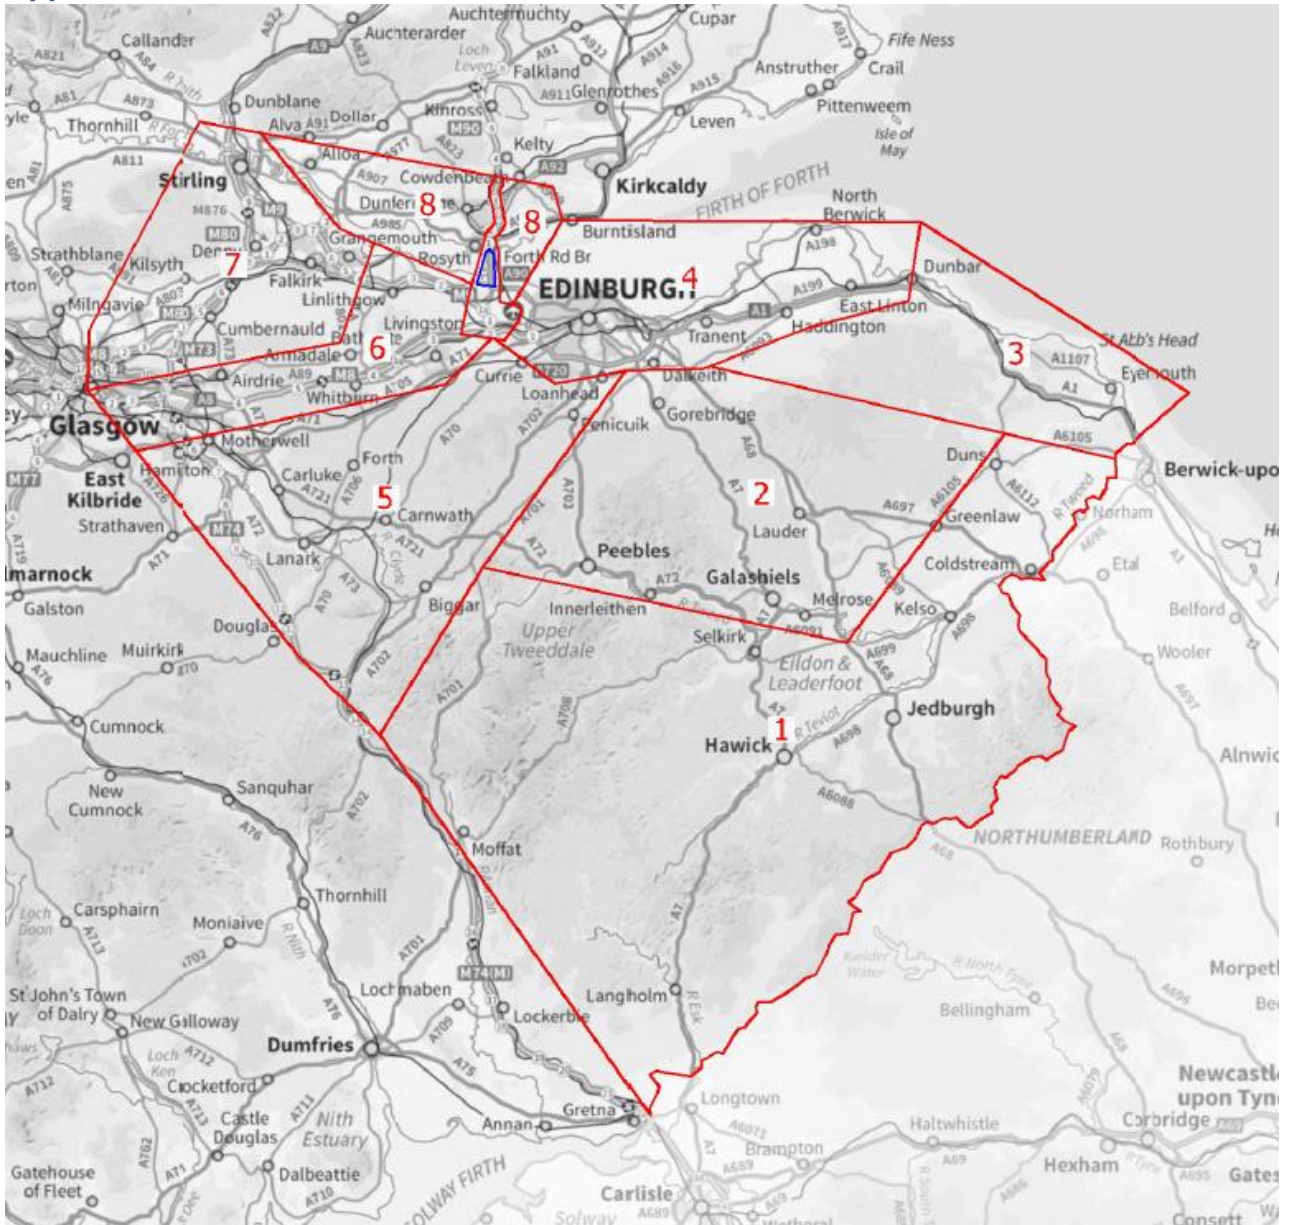

There are permanent concrete barriers between A720 Baberton Junction (Water of Leith Bridge) and Lothianburn Junctions and between M90 Scotstoun Bend through to the J1c Admiralty Offslip.

Route	Location	Description
A720	Baberton Junction (Water of Leith Bridge) to Lothianburn	Concrete central reserve barrier
M90	Scotstoun Bend to J1c Admiralty Offslip	Concrete central reserve barrier

Care will be taken to ensure that deep lying snow is ploughed away from these vertical barriers by the use of echelon ploughing to the left verge.

**Appendix WSP10 – Forecast Domains**

Domain Number	Route	Location
1	A7	Terrona
2	A68	Soutra
3	A1	Grantshouse
4	A720	Swanston
5	A702	Abington
6	M8	Whitburn
7	M80	Haggs
8	M90	Halbeath
9	M90/A9000	Forth Road Bridge NW

## Appendix WSP11 – Snow and Ice Build-Up on Bridges

Definition of snow and ice accretion - snow and ice accretion is the gradual build-up of atmospheric water in a solid form on the surfaces of structures on which it impinges. It includes precipitation icing (freezing rain).

When snow or ice accretion occurs on the structure of the bridge assessments need to be made to balance road user safety against the significant disruption that would be caused by closing the bridge.

During any period of significant snow fall, relative humidity, wind speed and temperature should be closely monitored by the WSDO. If the following parameters are met during a snowfall event then snow accretion may occur.

- Relative Humidity exceeds 90 degrees.
- Wind Speed exceeds 8m/s
- Temperature is between MS1.5°C and +1.5°C
- (Note: these are guidelines only and snow accretion could occur when conditions are outside these parameters).

The main cables, cable bands, main tower faces and tower top lifting beams should be monitored for snow / ice accretion. This can be done by inspection teams using binoculars from the footways or if conditions allow, from the tower tops and cables – and reported to the WSDO. The WSDO will take advice, where required, from the Severe Weather Manager. Records will be produced and retained in respect of any such accumulations.

Traditional mechanical methods will be used to remove overhead snow or ice accumulations where it is considered safe to do so. If it is not safe to do so then lane, carriageway or full bridge closure will be considered in consultation with Police Scotland and/or Transport Scotland.

If significant snow or ice accretions are identified the bridge will be closed to all road users to allow the extent of the accretions to be assessed. If the snow is considered soft enough such that when it falls it will not impact on vehicles then the bridge could be reopened to all traffic. Should ice accretion occur on the Forth Road Bridge and if it is deemed safe to do so the FRB shuttle bus will be mobilised for pedestrians and cyclists at this time. When traffic lanes are closed the shuttle bus service will cease.

In certain prevailing wind conditions accretions on the external face of a tower leg on the Forth Road Bridge maybe unlikely to affect the carriageway. WSDO/SWM would consult with Police Scotland and Transport Scotland to discuss any potential partial openings of the bridge.

If ice has formed or the snow appears to be icy then the bridge will remain closed until it is considered safe to reopen a lane, a carriageway or the bridge. Further discussions will be held with Police Scotland and Transport Scotland throughout.

Throughout this process it is important that continual monitoring and inspection is undertaken is to ensure public and employee safety.

## Appendix WSP12 – Arrangements and Mitigation Measures for Dealing with Vulnerable Locations

Table of Known Vulnerable Locations

Road Number	Location	Vulnerability type
A1	Dunbar to English Border	Water run-off
A68	North of Fala	Water run-off
A7	North of Teviothead at Priesthaugh Junction (drainage work completed but still minor issues)	Water run-off
A7	North of Skippers Bridge near Langholm	Water run-off
A7	South of Langholm at entrance to Sewage Treatment Works	Water run-off
A702	Immediately North of Silverburn	Water run-off
A702	North of Abington	Water run-off
A9000	Forth Road Bridge	Frost susceptible
M8	J3 to J5	Frost susceptible
A68	Huntsford Bends to Carter Bar	Frost susceptible
A68	Pathhead to Soutra	Frost susceptible
A68	South of Soutra to Carfraemill	Frost susceptible
A7	Newmills to Castle Hermitage junction	Frost susceptible
A702	South of A703 junction to north of West Linton	Frost susceptible
A702	Candymill to north of Coulter	Frost susceptible
A7	Auchenrivock Improvement	Significant gradient
A68	Soutra	Significant gradient
A68	Carter Bar	Significant gradient
A68	St Boswells to Ancrum	Significant gradient
A720	Calder to Baberton	Significant gradient
M8	Livingston	Significant gradient

Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31 on a vulnerable location with a significant gradient.

<b>VULNERABLE LOCATION – A9000 FORTH ROAD BRIDGE</b>	
Location	A9000 Forth Road Bridge
Grid Reference	312462, 678185 to 312605, 681143
Problems	<p>2.5km of the carriageway over the Forth Road Bridge where traffic flows have substantially reduced due to the change in use of the bridge as becoming part of the Public Transport Corridor.</p> <ul style="list-style-type: none"> <li>• Frost is prone to occur</li> <li>• A significant build-up of snow has the potential to happen</li> <li>• Extreme low temperature could occur</li> </ul>
Has this site experienced problems before or is it an identified risk?	The site has experienced extreme low temperatures and high snow build-up that has created, not only a risk to the few vehicles that use the bridge, but also the bridge itself, due to the weight of the snow building on the structure.
<b>Detailed Mitigation Measures – Significant Snowfall</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• To close the Forth Road Bridge to all traffic when either the road surface temperature gets below the threshold level, or that the snow build-up has exceeded the threshold level. This would stay in place until the weather event has passed or that temperatures were high enough that frost and ice would not be present.</li> <li>• Remove snow by mechanical means if the snow build-up poses a risk to the structure</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• When the South East Weather Station has identified that the surface temperature has gone down below MS10°C (threshold level), or that there is lying snow present on the carriageway.</li> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31.</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS to warn drivers of driving conditions or closure.</li> </ul>

<b>VULNERABLE LOCATION – A68 HUNTSFORD BENDS TO CARTER BAR</b>	
Location	A68 Huntsford Bends to Carter Bar
Grid Reference	368982, 608874 – 369822, 606805
Problem	Significant snow accumulations and drifting over higher ground 200 – 350m, gradient can cause HGVs to lose traction.
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to ensure it remains open. The A68 in Northumberland is not a trunk road and has a lower level of winter service which can affect the running of the A68 in Scotland.
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• The patrol runs 3 miles into England to check conditions to allow the WSDO to contact Northumberland Council</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• All patrols will run into England</li> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31. Alternative de-icers will be used with prior consent from Transport Scotland</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from Scottish Borders Council and local farmers</li> </ul>

<b>VULNERABLE LOCATION – A68 PATHHEAD TO OXTON</b>	
Location	A68 Pathhead to A68 Oxtton prior to Carfraemill
Grid Reference	339981,663726 – 349317,654609
Problem	Significant snow accumulations and drifting over higher ground 200 – 350m.
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to ensure it remains open. This is the highest point on the South East Network
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed at Soutra Hill to provide extra assistance if required</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> <li>• If required snow gates will be closed</li> <li>• Extend to Pathhead Village</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31. Alternative de-icers will be used with prior consent from Transport Scotland</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> <li>• Police Scotland will make any decision on closing the road</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from Scottish Borders Council and local farmers</li> </ul>

<b>VULNERABLE LOCATION – M8 J3 LIVINGSTON TO J5 SHOTTS</b>	
Location	M8 J3 Livingston to M8 J5 Shotts
Grid Reference	304774,670298 – 286711,663890
Problem	13-mile length of 2 Lane Motorway at higher altitude (200 -250m) prone to significant snow accumulations
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to ensure it remains open.
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed on the M8 to provide extra assistance if required</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> <li>• Request assistance from Amey on the M8 DBFO contract if they are not affected. This will allow resources to move slightly further east and enable more vehicles to be on the road and treating</li> <li>• Closure of slip roads using emergency traffic management</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31.</li> <li>• Alternative de-icers will be used with prior consent from Transport Scotland</li> <li>• Emergency traffic management will be placed on site prior to any extreme weather being forecast</li> <li>• Comply with Operating Company requirements as identified in the Snow Plans of DBFO Contract Providers when enacted by Transport Scotland or the relevant parts of Unit</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> <li>• Severe Weather Manager will consult Transport Scotland prior to using the traffic management</li> <li>• Police Scotland will make any decision on closing the road and implement the traffic management</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from local councils and local farmers if possible</li> </ul>

<b>VULNERABLE LOCATION – A7 NEWMILL TO CASTLE HERMITAGE JUNCTION</b>	
Location	A7 Newmill to Castle Hermitage Junction
Grid Reference	345300, 610511 – 338831, 596216
Problem	Significant snow accumulations and drifting over higher ground 200 – 350m
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to ensure it remains open.
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> <li>• Request assistance from Scottish Borders Council</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31.</li> <li>• Alternative de-icers will be used with prior consent from Transport Scotland</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from local councils and local farmers if possible</li> </ul>

<b>VULNERABLE LOCATION – A702 SOUTH OF A703 TO NORTH OF WEST LINTON</b>	
Location	A702 South of A703 Junction to North of West Linton
Grid Reference	325012,666305 – 315323,652319
Problem	Significant snow accumulations and drifting over higher ground 200 – 250m
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to ensure it remains open. The steep verges make this area difficult to remove snow and long straights are prone to drifting.
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> <li>• Request assistance from local councils and farmers</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31.</li> <li>• Alternative de-icers will be used with prior consent from Transport Scotland</li> </ul>

Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from local councils and local farmers if possible</li> </ul>

<b>VULNERABLE LOCATION – A702 CANDYMILL TO NORTH OF COULTER</b>	
Location	A702 Candymill to North of Coultter
Grid Reference	307403,641754 – 302375,634100
Problem	Significant snow accumulations and drifting over higher ground 200 – 250m
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to ensure it remains open. The steep verges make this area difficult to remove snow and long straights are prone to drifting
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> <li>• Request assistance from local councils and farmers</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31.</li> <li>• Alternative de-icers will be used with prior consent from Transport Scotland</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from local councils and local farmers if possible</li> </ul>

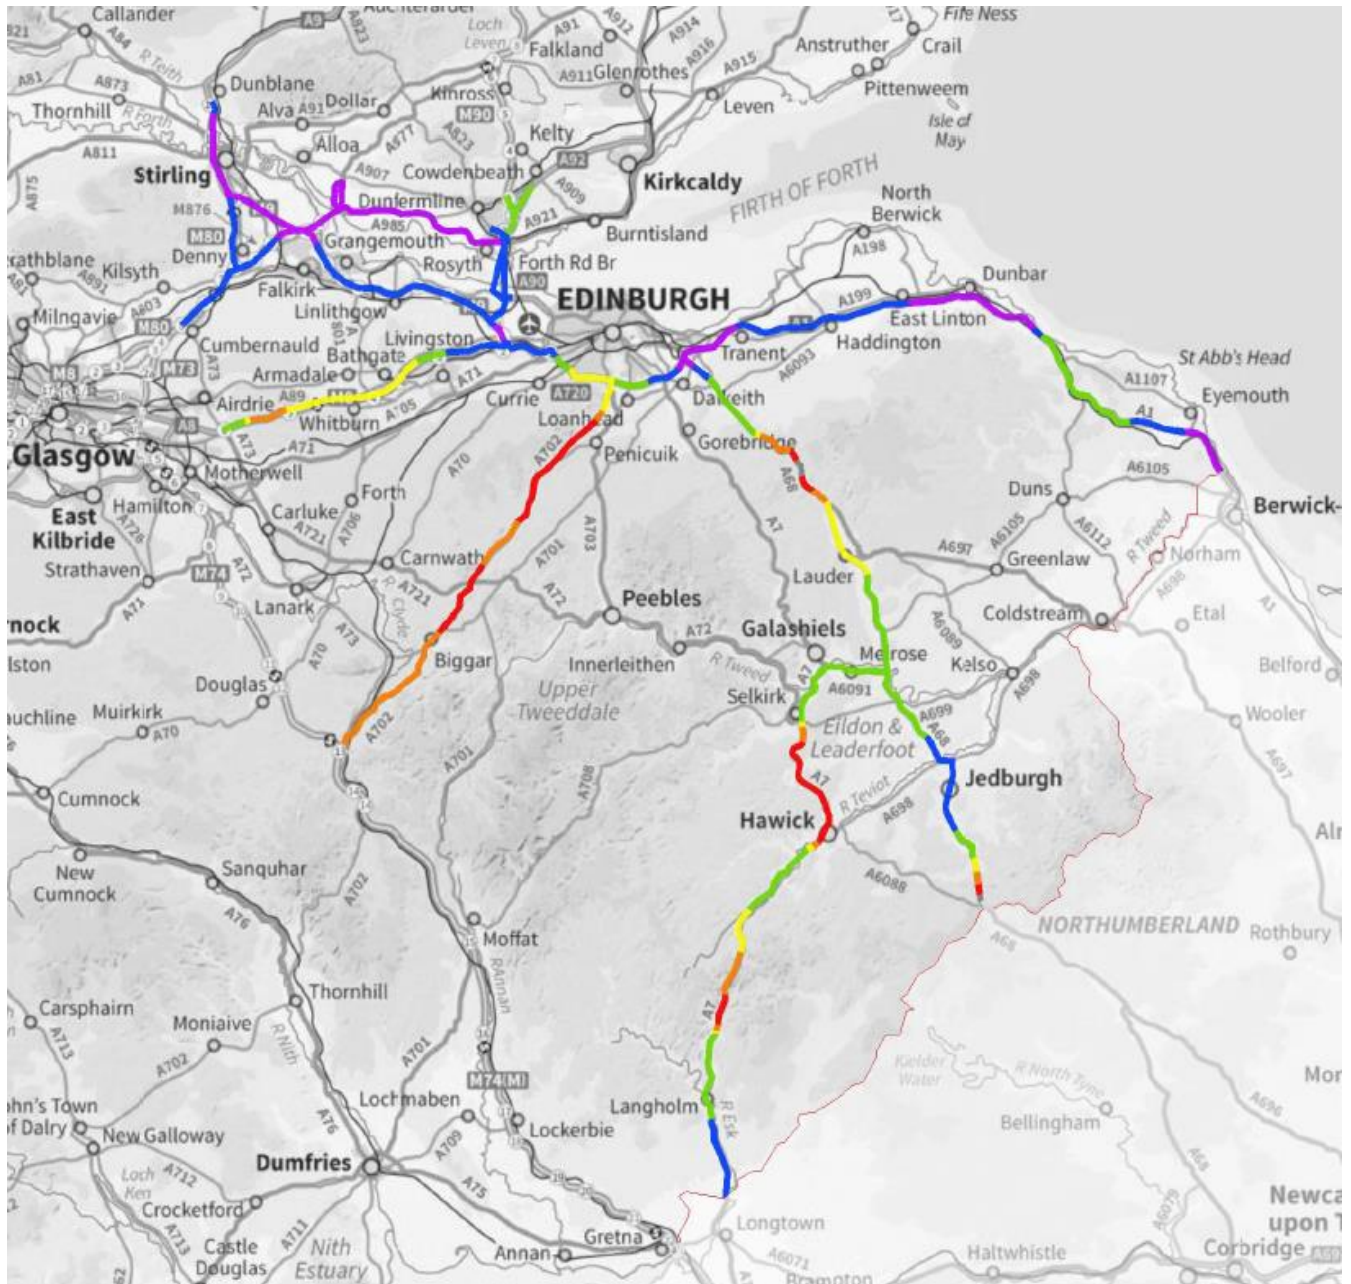

<b>VULNERABLE LOCATION – A68 ST BOSWELLS TO ANCRUM</b>	
Location	A68 St Boswells to Ancrum
Grid Reference	363479, 630500 – 363479, 624944
Problem	The area has a number of small dips and hills along the whole section along with a few junctions. When vehicles stop to turn into junctions HGVs can then struggle for traction.
Has this site experienced problems before or is it an identified risk?	Over a number of years this area has required additional resources to assist HGVs with traction once stopped. Once moving again there are no issues.
<b>Detailed Mitigation Measures</b>	
Optional Mitigation Primary Measure	<ul style="list-style-type: none"> <li>• During snow events reserve fleet/additional winter plant may be deployed</li> <li>• If possible, move resources from areas not affected by snow</li> <li>• Consider the use of alternative de-icers when temperatures are below MS7°C</li> </ul>
When enacted	<ul style="list-style-type: none"> <li>• Reserve fleet/additional winter plant will be mobilised where the forecast indicates any snow accumulations as per Schedule 2 Section 6.2.31.</li> <li>• Alternative de-icers will be used with prior consent from Transport Scotland</li> </ul>
Who enacts	<ul style="list-style-type: none"> <li>• WSDO in consultation with Severe Weather Manager</li> </ul>
Other Measures	<ul style="list-style-type: none"> <li>• Use of VMS sign to warn drivers of driving conditions or closure</li> <li>• Extra assistance from Scottish Borders Council and local farmers if possible</li> </ul>

This message was sent by [WSDO]/BEAR Scotland Ltd (SE) via Vaisala RoadDSS Manager system.

**ACTUAL**

The Actual Actions are recorded and stored electronically in Vaisala Manager. These can be called up by generating a Treatment Plan and Action Report for the required time period.

A screenshot showing the output from Vaisala Manager is below. The Reports can also be exported in Excel format.

**EXAMPLES FROM NORTH EAST CONTRACT**

**Treatment Plan and Action Report**

Excel report for the treatment plans and operations. The maximum length of the time period is one year.

## Appendix WSP15 – Winter Service Plant

**(Table 6.1.6) – Winter Service Plant for All Winter Patrols**

Type and Registration No	Depot Location	Specification Capacity including	Quantity	Plant Use *
Daf/ Schmidt	Charlesfield	6m <sup>3</sup> pre-wet spreader	2	(ii)
Daf/ Schmidt	Bonnyrigg	6m <sup>3</sup> pre-wet spreader	5	(ii)
Daf/ Schmidt	Burghmuir	6m <sup>3</sup> pre-wet spreader	1	(ii)
		9m <sup>3</sup> pre-wet spreader / 3000 litre sprayer combination	1	(ii)
Daf/ Schmidt	Chryston	6m <sup>3</sup> pre-wet spreader	1	(ii)
Daf/ Schmidt	Rosyth	9m <sup>3</sup> pre-wet spreader / 3000 litre sprayer combination	3	(ii)

**(Table 6.1.7) – Frontline Winter Service Plant Permanently Available and Located in the Unit for Winter Service for Carriageways**

Type of Winter Service Plant and Registration Number	Depot Location	Vehicle Capacity	Number of Vehicles	Plant Use*
32t Daf/ Econ	Charlesfield	12m <sup>3</sup>	3	(i)
32t Daf/ Econ	Bonnyrigg	12m <sup>3</sup>	8	(i)
32t Daf/ Econ	Burghmuir	12m <sup>3</sup>	5	(i)
32t Daf/ Econ	Chryston	12m <sup>3</sup>	2	(i)
32t Daf/ Econ	Rosyth	12m <sup>3</sup>	3	(i)
26t Daf/ Econ spray tanker		10,000 litres	1	(i)

**(Table 6.1.8) – Frontline Winter Service Plant Permanently Available and Located in the Unit for Winter Service for Footways, Footbridges and Cycling Facilities**

Type of Winter Service Plant and Registration Number	Depot Location	Vehicle Capacity	Number of Vehicles	Plant Use*
Footway tractor, demountable spray tank, salt hopper and plough	Charlesfield	250L or 0.5t	2	(i)
Footway tractor, demountable spray tank, salt hopper and plough	Bonnyrigg	250L or 0.5t	1	(i)
Footway tractor, demountable spray tank, salt hopper and plough	Rosyth	250L or 0.5t	1	(i)
Multihog multi-purpose vehicle with split tank for Brine & PA, demountable plough on front	S. Queensferry	1000L or 1.0t	1	(i)

**(Table 6.1.9) – Reserve Winter Service Plant Permanently Available and Located in the Unit for Winter Service for Carriageways, Footways, Footbridges and Cycling Facilities**

Type of Winter Service Plant & Registration Number	Depot Location	Vehicle Capacity	Number of Vehicles	Plant Use*
Demount pre-wet spreader / to be confirmed	Charlesfield	12m <sup>3</sup>	1	(i)
Demount pre-wet spreader / to be confirmed	Bonnyrigg	12m <sup>3</sup> 6m <sup>3</sup>	2 2	(i) (i) and (ii)
Demount pre-wet spreader / to be confirmed	Burghmuir	12m <sup>3</sup> 6m <sup>3</sup>	2 1	(i) (i) and (ii)
Demount pre-wet spreader / to be confirmed	Chryston	6m <sup>3</sup>	1	(i) and (ii)
Demount pre-wet spreader / to be confirmed	Rosyth	12m <sup>3</sup>	1	(i)
Demount pre-wet spreader		6m <sup>3</sup>	1	(i) and (ii)
26t Demount tanker sprayer / to be confirmed		10,000	1	(i)
Footway tractor, demountable spray tank, salt hopper and plough	Bonnyrigg	250L or 0.5t	1	(i)
Footway tractor, demountable spray tank, salt hopper and plough	Burghmuir	250L or 0.5t	1	(i)

\* (i) precautionary treatment and clearance of snow with a depth up to 100 millimetres.

(ii) Winter Service Patrols

**(Table 6.1.10) – Additional Winter Service Plant**

Type of Winter Service Plant & Registration Number	Depot Location/Third Party Operator	Vehicle Capacity	Number of Vehicles	Mobilisation Time
Tractor Plough	Charlesfield		1	2 hours
Tractor Plough	Bonnyrigg		1	2 hours
Tractor Plough	Burghmuir		1	2 hours
Snowblower	Charlesfield		1	2 hours
Snowblower	Bonnyrigg		1	2 hours
Snowblower	Burghmuir		1	2 hours
Snowblower	Rosyth		1	2 hours
Footway Snowblower	Queensferry		1	2 hours
Walk Behind Pedestrian Plough	Charlesfield		2	2 hours
Walk Behind Pedestrian Plough	Bonnyrigg		1	2 hours
Tractor Plough / Snowblower	Agri Services A92 Ladybank		1	4 hours
Tractor Plough	Borders Machinery Ring (various locations)		6	4 hours
Tractor Plough	Broadwoodhead Haddington		1	4 hours
Tractor Plough	Grant Ritchie Gorebridge		2	4 hours
Tractor Plough	Howieson A702 West Linton		2	4 hours
Raiko Icebreaker	Transport Scotland (Burghmuir)		1	4 hours

## Appendix WSP16 – Examples of Forms Completed by Winter Maintenance Operational Staff

### Winter Driver's Record

Winter Drivers Record		ACTION PLAN DATE:

**Appendix WSP18 (Table 6.11, 6.11.1/2/3/4 and 6.12.1/2) – Decision Matrix for Winter Service**

**Table 6.11 – Decision Matrix for Winter Service**

**Table 6.11.1 – Decision Matrix for Winter Service**

Road Surface Temperature	Predicted Road Conditions		
	Wet	Wet Patches	Dry
May fall below 1°C	Salt before frost	Salt before frost (See note A)	No action likely, monitor weather (See note A)
Expected to fall below 1°C	Salt before frost (see note B)		
	Salt after rain stops		
	Salt before frost and after rain stops (see note C)		
	Salt before frost	Monitor weather conditions	
Expected snow	Salt before snow		
Freezing Rain	Salt before rainfall (see note C)		
	Salt during rainfall (see note C)		
	Salt after rainfall (see note C)		

Notes:

- (a) Particular attention should be given to any possibility of water running across carriageways and such locations should be monitored and treated as required.
- (b) When a weather forecast contains reference to expected hoarfrost considerable deposits of frost are likely to occur and close monitoring will be required. Particular attention should be given to the timing of precautionary treatments due to the possibility that salt deposited on a dry road may be dispersed before it can become effective.
- (c) Under these circumstances rain will freeze on contact with running surfaces and full pre-treatment should be provided even on dry roads. This is a most serious condition and should be monitored closely and continuously throughout the danger period.

Table 6.11.2 sets out the spread rates for precautionary treatments. Rate of spread for precautionary treatments should not be adjusted to take account of residual salt or surface moisture unless stated otherwise.

The rates in the table below are for precautionary salt treatment prior to snowfall that is essential to form a de-bonding layer and snow clearance.

**Table 6.11.2 – Treatment Matrix Spread Rates for Precautionary Treatments**

Item	Forecast weather condition	Dry or damp road (grammes/square metre)	Road Surface Wet / Frost Susceptible / Surface Water Run-off Area (grammes/square metre)
1	RST higher than plus 1°C	0	0
2	RST lower than or equal to plus 1°C but higher than minus 2°C	10	20
3	RST lower than or equal to minus 2°C but higher than minus 5°C	15	30
4	RST lower than or equal to minus 5°C (or see TS alternative de-icer guidance)	30	40
5	Freezing Fog	Add 5 to Item 1 to 4 as applicable	Add 10 to Item 1 to 3 as applicable; otherwise as per item 4.
6	Freezing Rain	40	40
7	Snow Accumulations of any depth	40	40

**Table 6.11.3 – Precautionary Treatment Potassium Acetate Spreading Rates**

Conditions forecast	Spread Rate (litres/square metre)
Road surface temperature lower than or equal to plus 1°C but higher than minus 2°C	0.0156
Road surface temperature lower than or equal to minus 2°C but higher than minus 5°C	0.0312
Frost and road surface temperature lower than -5°C	a minimum of 0.0312 which should be increased with manufacturer's recommendations
Snow	
Freezing conditions after rain	

**Table 6.11.4 – Snow or Ice Clearance Salt Spreading Rates**

Road Surface Condition	Treatment				
	Spreading Salt (grammes/square metre)	Ploughing	Blowing	Alternative De-Icer	Ice Breaker
Ice Formed	40	No	No	Where Applicable	No
Snow covering of less than 30mm	40	Yes	No	No	No
Snow covering exceeds 30mm	40	Yes	No	No	No
Snow accumulations due to prolonged snowfall	40	Yes (continuous)	Where applicable	No	No
Hard packed snow/ice less than 20mm thick	40 (successive treatments)	No	No	No	Where applicable
Hard packed snow/ice	salt/abrasive (successive)	No	No	Yes	Yes

**Attachment 6.12 Snow Clearance**

**Table 6.12.1 Snow Clearance**

Condition Criteria	Category A Patrol Routes		Non Category A Patrol Routes	
	Dual Carriageways & Motorways		Dual Carriageways	Dual Wide Single 2+1 & Single Carriageways
	Number of Existing Lanes		Number of Existing Lanes	
	2	3 or More	2	1 or 2 (WS 2 + 1)
	Minimum number of lanes in each direction free from ice and snow as far as is reasonably practicable		Minimum number of lanes in each direction free from ice and snow as far as is reasonably practicable (Except where snow gates)	
Snow at any time	1	2	1	1
Following clearance of minimum lanes or the cessation of snow fall all lanes are to be clear of snow	3 hours	3 hours	3 hours	3 hours

**Table 6.12.2 Road Surface Wetness**

Definition	Description	Water film thickness (for when using WFT instrumentation)
Dry Road	A road that shows no signs of water or dampness at the surface but may be just detectably darker. It may have moisture contained in pores below the surface that is not 'pumped' to the surface by traffic.	0 to 0.03mm (=0-30 g/m <sup>2</sup> )
Damp Road	A road which is clearly dark but traffic does not generate any spray. This would be typical of a well-drained road when there has been no rainfall after 6 hours before the treatment time.	0.03 to 0.05mm (=30-50 g/m <sup>2</sup> )
Wet Road	A road on which traffic produces fine spray but not small water droplets. This would be typical of a well-drained road when there has been rainfall up to 3 hours before the treatment time.	0.05 to 0.1mm (=50-100 g/m <sup>2</sup> )
Very Wet Road and Flowing Water on Road*	A road on which traffic produces droplets of water in the air to visibly flowing water on the surface	Greater than 0.1mm (=>100 g/m <sup>2</sup> )

**Appendix WSP19 (Table 6.10.2) – Footways, Footbridges and Cycleways – Response Times and Clearance Requirements for Snow or Ice Occurring Together**

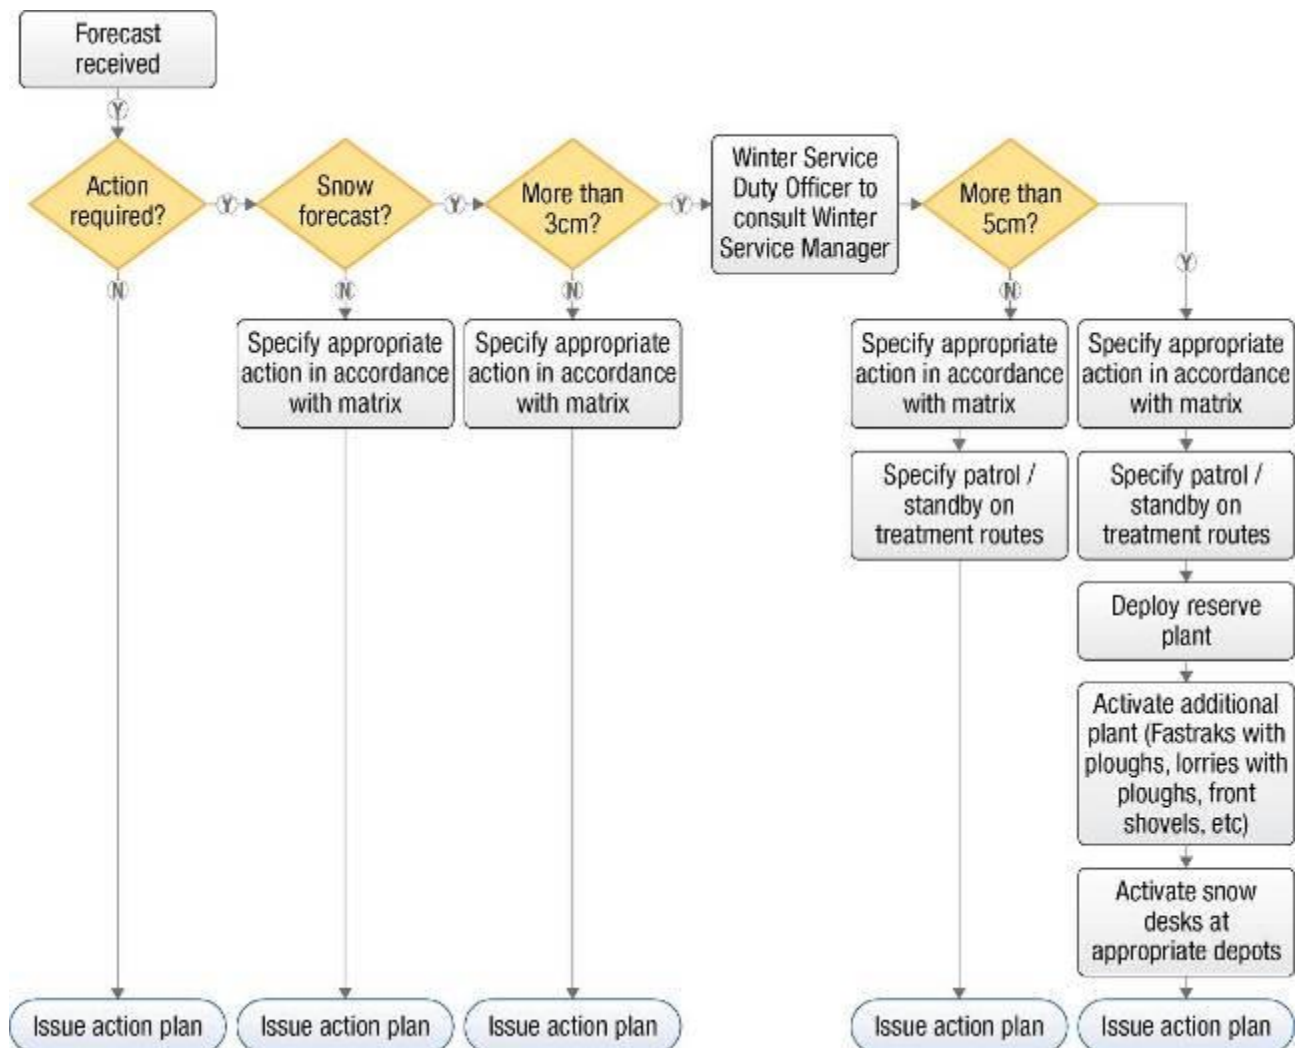

**Table 6.10.2 - Footways, Footbridges and Cycleways – Response Times and Clearance Requirements for Snow or Ice Occurring Together**

Categories	General	Between 06.00 and 19.00 hours	Treatments out with daytime hours
A	Between the hours of 06.00 and 19.00, commence snow clearing as soon as practicable to prevent compaction by traffic. Ploughing should be continuous thereafter to prevent a build up of snow.	Clear all snow within 2 hours of snow ceasing to fall. On wide routes, 1.2 metre minimum width shall be cleared initially.	Clear snow when required by the Director.

## Appendix WSP20 – Snow Forecast Resource Deployment Matrix

The following domain specific snow event escalation matrix will be used. Consultation will still need to take into account the forecast confidence level, altitude and timing.

**Appendix WSP21 – De-icing Materials**

De-icing Material (i.e. Dry salt/ABP)	Location	Type (barn/open)	Min (tonnes) 1st Oct
Dry salt	Charlesfield	Covered storage	1,500 T
Dry salt	Bonnyrigg	Covered storage	10,000 T
Dry salt	Burghmuir	Covered storage	3,000 T
Dry salt	Rosyth	Covered storage	5,500 T
Dry salt	Chryston	Covered storage	500 T
Dry salt	Duns (SBC)*	Covered storage	500 T
Dry salt	Hawick (SBC)*	Covered storage	500 T
		<b>Total</b>	21,500 T

Dry salt for brine	Charlesfield	Covered storage	30 T
Dry salt for brine	Bonnyrigg	Covered storage	90 T
Dry salt for brine	Burghmuir	Covered storage	60 T
Dry salt for brine	Rosyth	Covered storage	60 T
Dry salt for brine	Chryston	Covered storage	30 T
		<b>Total</b>	270 T

Potassium Acetate	Rosyth	Storage Tanks	135,000 litres
Potassium Acetate	S. Queensferry	1,000 litre Intermediate Bulk Containers	15,000 litres
		<b>Total</b>	150,000 litres

Magnesium Chloride	Charlesfield	1,000 litre Intermediate Bulk Containers	8,000 litres
Magnesium Chloride	Bonnyrigg	1,000 litre Intermediate Bulk Containers	19,000 litres
Magnesium Chloride	Burghmuir	1,000 litre Intermediate Bulk Containers	12,000 litres
Magnesium Chloride	Rosyth	1,000 litre Intermediate Bulk Containers	8,000 litres
Magnesium Chloride	Chryston	1,000 litre Intermediate Bulk Containers	3,000 litres
		<b>Total</b>	50,000 litres

<b>Depot</b>	<b>Brine Saturator</b>	<b>Brine Storage Capacity</b>	<b>Total Combined</b>
Charlesfield	5 m <sup>3</sup> saturator / 25,000 litres storage	0	25,000 litres
Bonnyrigg	5 m <sup>3</sup> saturator / 25,000 litres storage	45,000 litres	70,000 litres
Burghmuir	5 m <sup>3</sup> saturator / 15,000 litres storage	22,000 litres	37,000 litres
Rosyth	5 m <sup>3</sup> saturator / 15,000 litres storage	22,000 litres	37,000 litres
Chryston	5 m <sup>3</sup> saturator / 15,000 litres storage		15,000 litres
<b>Totals</b>			184,000 litres

\* These depots will be utilised in snow conditions

## Appendix WSP22 – Snow and Ice Clearance Procedures

### Carriageway Surfaces

BEAR Scotland will, so far as is reasonably practicable, ensure sufficient resources are available to prevent snow or ice from remaining on the Network, and put into place specific arrangements to ensure that these resources will be available as and when required.

The WSDO, in discussion with the Severe Weather Manager, will determine, from the 2-5 day weather forecast, the requirements to mobilise additional resources. Winter Service shifts and the preparation of de-icing and ploughing equipment will be instructed by the WSDO. Conditions and de-icing spread rates for snow and ice clearance of carriageways are detailed in Appendix WSP18.

The clearance procedure for dual carriageways and motorways will be echelon ploughing (2 or more vehicles moving in the same direction, one behind each other on different lanes). Ploughing techniques to be adopted are shown in Figures 22/1 below.

Ploughing Techniques (Carriageway surfaces)
2 Lane dual carriageway without hardshoulders: The method of clearance, on both carriageways, should be: (a) plough the left-hand lane to the verge; (b) plough the right-hand lane to the central reservation
2 Lane dual carriageway with hardshoulders: The method of clearance, on both carriageways, should be: (a) plough the left-hand lane to the hardshoulder; (b) plough the right-hand lane to the central reservation; (c) plough the hardshoulder to the verge
3 Lane dual carriageway without hardshoulders: The method of clearance, on both carriageways, shall be: (a) plough the centre lane to the left hand lane; (b) plough the left-hand lane to the verge; (c) plough the right-hand lane to the central reservation
3 Lane dual carriageway with hardshoulders: The method of clearance, on both carriageways, shall be: (a) plough the centre lane to the left-hand lane; (b) plough the left-hand lane to the hardshoulder; (c) plough the right-hand lane to the central reservation; (d) plough the hardshoulder to the verge

**Figure 22/1: Ploughing Techniques – Carriageway Surfaces**

### Forth Road Bridge

The clearance procedure for the removal of snow from the Forth Road Bridge deck, would be that ploughs would be set to a level above the surface, due to the presence of the protruding metal bridge deck joints, and echelon ploughing would be carried out across the bridge, with snow being directed as outlined in Figure 22/2. Further continuous treatment with potassium acetate would then be carried out, together with the application of grit, if required.

Snow requiring to be cleared from the Viaduct sections of the Forth Road Bridge would be tackled by directional ploughing from the carriageway to the footway, and from the footways from where the snow would be either transported off site or deposited in a safe location at the ends of the

structure. Forth Road Bridge footways would be closed during snow clearing operations and transport provided, similar to high wind footway closures.

Where hard packed snow and ice not exceeding 20mm thick has formed, and the air temperature is above minus 5°C, removal will be achieved by successive spreading of de-icing material. Below minus 5°C or where the snow or ice is more than 20mm thick, a single sized abrasive aggregate of particle size of 6mm, or 5mm sharp sand and having low fines content will be added to the de-icing material on a 1:1 ratio. Reversion to the use of de-icing material only will be made as soon as possible. Abrasive aggregates will be considered as a supplement on footway sections where de-icing material alone would provide an unacceptably slippery surface.

<b>Ploughing Techniques – Forth Road Bridge</b>
<p><b>Viaduct. And up to 50 metres before Side Span*</b></p> <p>The method of clearance, on both carriageways, should be by echelon ploughing:</p> <p>(a) plough the right-hand lane to the left hand lane;</p> <p>(b) plough the left-hand lane to the footway / verge</p>
<p><b>Side Span (including suspended span).</b></p> <p>The method of clearance, on both carriageways, should be by echelon ploughing:</p> <p>(a) plough the left-hand lane to the grillage / verge;</p> <p>(b) plough the right-hand lane to the grillage / central reservation</p>
<p><b>Viaduct. From 50 metres beyond Side Spans*</b></p> <p>The method of clearance, on both carriageways, should be by echelon ploughing:</p> <p>(a) plough the left-hand lane to the footway / verge;</p> <p>(b) plough the right-hand lane to the grillage / central reservation</p>

**Figure 22/2: Ploughing Techniques – Forth Road Bridge**

*\*Over the 50 metres prior to and beyond the Suspended Span, drivers require to alter the angle of the snow plough blade from ploughing to the left to ploughing to the right.*

**Queensferry Crossing**

<b>Ploughing Techniques – Queensferry Crossing Bridge</b>
<p><b>Viaduct. And up to 50 metres before Side Span*</b></p> <p>The method of clearance, on both carriageways, should be by echelon ploughing:</p> <p>(a) plough the right-hand lane to the left-hand lane;            (b) plough the left-hand lane to the hardshoulder</p>
<p><b>Side Span (including suspended span).</b></p> <p>The method of clearance, on both carriageways, should be by echelon ploughing:</p> <p>(a) plough the right-hand lane to the left-hand lane;            (b) plough the left-hand lane to the hardshoulder</p>
<p><b>Viaduct. From 50 metres beyond Side Spans*</b></p> <p>The method of clearance, on both carriageways, should be by echelon ploughing:</p> <p>(a) plough the right-hand lane to the left-hand lane;            (b) plough the left-hand lane to the hardshoulder</p>

**Figure 22/3: Ploughing Techniques – Queensferry Crossing Bridge**

*\*If significant snow builds up in edge of the hardshoulder in sections over the shoreline of north and south Queensferry, this shall be pushed, using the V ploughs to the verges off the bridge structure. If the snow builds up on sections over the river Forth, then a snow blower shall be used to move this build up.*

During prolonged periods of snowfall at locations where the use of salt for de-icing is prohibited, ploughing will be continuous followed by repeated applications of de-icing chemical. If snow becomes hard packed, consideration will be given to applying 5mm sharp sand to aid traction while snow clearing operations are being carried out.

Ploughing routes will mirror the precautionary treatment routes. In severe weather the priority will be to keep one lane of the carriageway open. When conditions allow echelon ploughing will be utilised to clear all carriageway lanes.

**Forth Road Bridge – Loading Effects of Snow**

The critical structural area of the Forth Road Bridge (with respect to snow accumulation and associated loading effects) is the area where the viaduct footway flares to form the side span / suspended span footway. At this location the overall footway width flares from 6.172m (4.648m footway plus 1.524 verge) to 9.144m (4.648m footway plus 4.496 verge / reserve) over a distance of 54m. The critical loading criterion at this point is due to the underdeck stringer beams that are capable of supporting 2No. 3.5T vehicles passing in either direction e.g. total imposed weight of 7T over circa 3No. stringer beams. This is equivalent to circa 130mm deep snow across the panel width.

## WSP27 - Winter Service/ISU/TRISS – Action Plan Covid-19 Risks for Winter 2020/21

### Introduction

With Covid-19 likely to continue through winter 2020/21 it is essential that consideration contingency plans are in place to ensure the winter service along with emergency response is maintained at all times.

### Scenarios

There are three scenarios worth considering:-

1. Widespread impact across the business meaning say 30% of our winter team are either diagnosed Covid-19 positive or in isolation due to 'Test and Protect' system for tracking and tracing those potentially at risk.
2. A depot-based outbreak whereby a single team are badly affected again with diagnosed cases and those in isolation.
3. Further to 2, a full depot being required by health authorities to close.

Consideration needs to be given to how each of these situations would be managed for winter operatives and staff.

### Avoidance

Avoidance of infection is the first place is the starting point of any risk management process. This is managed by the implementation of the BEAR Scotland Covid-19 Safe Operating Procedure. This was published in June 2020 and has been utilised to date to help minimise the opportunities for the spreading of Covid-19 within our employees.

The main general controls are:-

	<b>Controls</b>	<b>Action By</b>
1	Prompt reporting of sickness, particularly with Covid-style symptoms and encouragement to stay at home if ill.	SW to refresh promotion of SoP
2	Good hygiene and enhanced cleaning regime in offices, depots and vehicles with plentiful supplies of handwash and other cleaning products.	SW to refresh promotion of SoP
3	Good physical distancing to reduce the opportunities for infection and also to limit those who would be impacted by the Test and Protect protocols. (Test and Protect captures people who have been in close contact with the diagnosed individual.)	SW to refresh promotion of SoP
4	All employees to be encouraged to act in line with government guidance in their daily lives.	IM to promote through staff newsletter

Additional Winter and ISU /TRISS controls are:-

	<b>Controls</b>	<b>Action by</b>
1	Winter, TRISS and ISU Drivers to limit contract with the wider circle of colleagues where possible and limit time in communal depot offices or bothies.	Managed by Operations Managers and implemented and monitored by Depot Supervisors
2	TRISS/ISU operative pairings to remain as constant as possible, working as a work family	Managed by Operations Managers and implemented and monitored by Depot Supervisors
3	Vehicle foggers to be available in each depot to regularly disinfect spreaders, TRISS and ISU vehicles every third day.	Purchased by SW, managed by Operations Managers and implemented and monitored by Depot Supervisors

### Additional Resources

The key to managing the three scenarios for the loss of employees, due to either infection or isolation, is to have a range of options for increasing the availability of drivers. Each depot should target having options to increase operative numbers by 30% to counter any reduction. The full isolation of a depot would be covered by this, plus similar resources from nearby depots and potentially a centrally located hit squad.

The most appropriate method of increasing availability will depend on the scale of the impact and the timing in relation to severe weather. The following hierarchy should be used to backfill for absent operatives. The identification of resource will start in the local depot then move to adjacent depots, across units as required:-

	<b>Source of additional operatives</b>	<b>Action required</b>	<b>Action by</b>
1	Any non-rostered drivers including appropriately qualified landscaping staff, supervisors and other members of staff	Identify each dept. Undertake refresher training	Operations Managers
2	Off duty patrol and frontline drivers	Manage locally	Supervisors
3	Employ Zero-hours drivers if possible	Recruit additional drivers to be used as and when required. Training required.	Ops Managers and HR
4	Driver agencies with preference for experienced drivers	Agree arrangements with regularly used agencies for ad-hoc use. Training or refresher training as required.	Ops Managers and HR
5	Other driver suppliers	Identify further sub-contractors, farmers	Operations Managers
6	Hit squads	Identify groups of individuals in each unit area prepared to relocate for a period to a severely impacted depot in the unit or across unit.	Operations Managers

## **TRISS/ISU Resources**

Similar back up plans should also be drawn up to cater for impacts on TRISS/ISU operatives.

## **Winter Staff**

Winter staff should follow the Covid SoP. Control Room staff should continue to operate in separate control rooms and WSDOS should work outwith either control room, within adjacent offices.

Contingencies for absent staff exist within the wider workforce which previous experience of both roles. The Operations Managers are capable of taking on the Winter Manager duties assisted by the Winter Managers in the other units.

## **SE Unit NMC**

### **9 July 2020 - 1400 hours – Virtual Meeting – Local authorities/Operating Companies/DBFOs**

#### **Attendees**

Autolink M6 DBFO - xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx  
Amey M8 DBFO – xxxx xxxx  
AMEY SW NMC - xxxx xxxx  
Fife Council – xxxx xxxx, xxxx xxxx  
East Lothian Council – xxxx xxxx  
Clackmannanshire Council – xxxx xxxx

xxxx xxxx / xxxx xxxx did a general presentation on the NMC Disruption Risk Management. Following the presentation the following items were discussed:  
xxxx xxxx of East Lothian Council was interested in the Wind Management Plan for the A1 Tyne Bridge as it impacts on ELC. Draft version of the Plan issued to him.  
xxxx xxxx asked if the Snow Plan would be the same for the interface between the A702 and the M74 (M6). It was agreed to hold a separate meeting to discuss the Snow Plan.  
xxxx xxxx of Fife Council wanted to know about mutual aid. It was explained that OC and TS could provide various forms of mutual aid if trunk road conditions allowed.

### **15 July 2020 – Virtual Meeting - Transport Scotland, Police Scotland and Traffic Scotland**

#### **Attendees**

Transport Scotland - xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx  
Police – xxxx xxxx  
Traffic Scotland – xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx  
BEAR Scotland – xxxx xxxx, xxxx xxxx

xxxx xxxx did a general presentation on the NMC Disruption Risk Management. Explained that other meetings had been held or were arranged with other Stakeholders to provide the Presentation and to go other specific details.  
Following the presentation there were discussions on the following points:  
TS – provide more information to Police, Traffic Scotland, other Cat 1 Responders on TRISS / ISU service enhancements especially new items such as cameras, defibrillators (emphasise these are not a replacement for the ambulance service), secondary response, incident management communications, operational deliverables, Airwave units (if more required). Replace snow accretions with ice accretions in presentation/WSP, winter app, push-to-talk, confirm key BEAR personnel.  
Traffic Scotland – request to share contact details for Network Hub, Communications Manager. Enhance the presentation so this could be shared with Traffic Scotland staff, list all vulnerable locations, events (whilst there has been a hiatus events will be held in the Autumn),  
Police Scotland – request to set up a working group for items such as A1 Tyne Bridge wind, FRB special arrangements, working group to agree an agenda for a follow-up agenda (Group consists of xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx, xxxx xxxx)

BEAR Scotland – clarification on Consultation Certificates v Minutes, agree forms to be utilised after Lean Review Outcomes (there would be a benefit in some SE and SW being the same)

**21 July 2020 - 1400 hours – Virtual Meeting – Local authorities/DBFOs**

**Attendees**
