| | Doors Open | 49:50 | | | | | |

* Booked times are public times.

NOTES:

- The train was lightly loaded from GQS. Passenger numbers gradually increased as the journey progressed. I would estimate that the train was no more than 50% loaded upon arrival at Edinburgh.
- Green signals throughout except for the run into Edinburgh where the normal restrictive aspects one would expect were shown. The train was not stopped by signals at any point.
- Acceleration of the Class 170 seemed a bit laboured but this was just a subjective assessment of the trains' performance. There is no suggestion that the train was under-performing against its schedule.
- Train braking seemed early and consistent with modern, economic professional driving techniques.
- A cautious approach to Edinburgh Waverley seemed consistent with First Scotrail's professional driving policy with the train proceeding at no more than 10 MPH with the train taking nearly a minute to transit from the platform end to half way down P12 (another unit was already stabled in P12).
- In summary this was a fast, comfortable and efficient journey and far superior to similar "inter-city" journeys such as York and Leeds to Manchester. This "one off" sample journey makes it difficult for the lay-person to see how a relatively small improvement in journey time (as proposed) would drive significant economic benefit.
