Locally important aquifers

Peatland

Class 1 (See Note 1)

Class 2 (See Note 2)

Class 3 (See Note 3)

Class 4 (See Note 4)

Class 5 (See Note 5)

Notes:

1) Class 1 - Nationally important carbon-rich soils, deep peat and priority peatland habitat. Areas likely to be of high conservation value.

2) Class 2 - Nationally Important carbon-rich soils, deep peat and priority peatland habitat. Areas of potentially high conservation value and restoration potential.

3) Class 3 - Dominant vegetation cover is not priority peatland habitat but is associated with wet and acidic type. Occasional peatland habitats can be found. Most soils are carbon-rich soils, with some areas of deep peat.

4) Class 4 - Area unlikely to be associated with peatland habitats or wet and acidic type. Area unlikely to include carbon-rich soils.

5) Class 5 - Soil information takes precedence over vegetation data. No peatland habitat recorded. May also include areas of bare soil. Soils are carbon-rich and deep peat.
